"And so, Hitler's great war was not against the United States, Great Britain, and Russia. His real war was against God. For to him God must be wrong as He is not exclusively an Aryan. His racial purity cannot be complete, as He is God of all men, even the inferior races."

The outcome of reasoning like this is war—international fratricidal war. And the roots of it are negation, the negation of the ancient faith.

Let me put it another way. Let me put it positively, as you and I prefer to put things. It is historically true that a nation's strength—its spiritual strength, which is the kind that chiefly counts—may be granted by its fidelity to God. The God-fearing nation enjoys the fruits of its fidelity. All other things that make for national strength are added to it: opportunity for manhood, reverence for womanhood, a sound family life, schools that teach men how to live well here on earth in order that they may live eternally in the sight of God. Jesus Christ once said to His disciples: "Seek ye first the Kingdom of God and all things else shall be added to you." That is good spirituality. It is also good sociology. It is excellent community ethics.

So, if we are to preserve our American heritage we must once again put first things first. I think that is what our founding fathers did. I submit that we must do so, too, before it is too late.

One place to begin doing so is in our peace plans. Some of us sense in many of the plans for the postwar world which have so far appeared a sign of the degeneration of our political concepts. A new society based on almost any one of these plans would have the same inherent fatal weaknesses that have already caused two appalling wars. Nowhere in them do we find convincing evidence that their authors recognize God and His natural

law with its concepts of rights and duties as they apply to nations as well as to individuals. Nowhere in them is there any real place for religious morality, let alone religion. They do not read like the harbingers of a new and better era. The ring of these international charters is very hollow, indeed, as compared to that of the great charter of our national liberties, the political credo of old America, the Declaration of Independence.

Yet, even before we give ourselves over completely to international planning we had best take careful stock of our national spiritual resources. Unless we do, we may find ourselves a nation of Mrs. Jellyby's. You remember that thoroughly sincere woman in Bleak House who was so concerned with the plight of the heathen in Africa that she devoted all her energies to plans for the colonization of Borrioboola-Gha while her own family shifted for themselves in a chaotic household for which she had neither time nor attention. There are grave grounds for asserting that our national household, like Mrs. Jellyby's, is in chaos. Is it not presumptuous to talk of creating an international society if we ignore the decline of family morality that is undermining our national vitality? May not the world raise its eyebrows if we preach a democratic peace when class hatred, race discrimination, and religious warfare are becoming commonplaces of our national life?

INTERNATIONAL GROUP

World peace we must have, an international organization to preserve that peace we must help construct. But these elaborate technical plans must find support in a moral atmosphere, and this requires that first we rid our hearts of enmity and hate here at home, and fill them with love of God and love of neighbor—not at the ends of the earth alone—but right here, at home.

In all this weary, silly world are there any men so foolish as those who talk world peace, and are deaf to neighborhood discord, or who bid us love the human race but hate the man next door!

"Six things there are which the Lord hateth," says the Book of Proverbs, "and the seventh His soul detesteth: haughty eyes, a lying tongue, hands that shed innocent blood, a heart that diviseth wicked plots, feet that are swift to run to mischief, a deceitful witness that uttereth lies, and him that soweth discord among brethren." Into this seventh class fall the exponents of racial and religious prejudice. Their number, sad to say, is legion. Judging by the amount of anti-Catholic literature of all kinds rolling from the presses of this country, judging by the opposition being organized against Catholics, Jews, and Negroes, a staggering percentage of people in this land of the free must still hate many millions of Americans.

Unfortunately, the only basis of unity some people have is a hate which they nurture in common. Some are united in their hatred of the American way of life; others in their hatred of Catholics, of Protestants, of Jews; others in their hatred of the Ten Commandments, of discipline, of order; we have even seen mighty organizations grow up in our country around a hatred for nicotine and for fermented grapes. But this sort of thing becomes intolerable when sowers of discord feed hatred by indicting a whole people because of the delinquency of a few individuals.

GOSPEL OF HATE

Some do this because there is no charity in them and they frankly follow a gospel of hate. Others do this out of a mistaken and distorted sense of the excellence of their own race or nationality, forgetting that no national or other group claims can possibly prescribe the prior claims of humanity. There is a pathetic story told of a Negro who was filling out a questionnaire. He came to the question: "What is your race?" With unconscious irony he wrote: "Human."

What better one-word parable for a generation which persecutes those not of its own race. Don't forget it—that your race is, first of all, the human race—the race for which Christ died. For sentimentality's sake, there is nothing wrong about being happy about your Irish, Italian, or French, ancestry. Such pride in nationality has been a great factor in human progress, as we can appreciate in the art, architecture, literature of the various peoples of the earth. Each has its own unique and beautiful type of expression.

But that pride of nationality which leads one race to hate another is a wicked thing. To hate people of another nationality is to hate Christ. We can hate their ideas, but we cannot hate them. They are of our race, the human race which Christ died to redeem. He loves everyone of them. We are not "one in Him" unless we do the same.

That is why I argue that, so far as Christians are concerned, all "anti" movements spring from the rejection of the commandment of Christ: "This is My commandment—that you love one another as I have loved you." Or again: "All things whatsoever you would that men should do to you, do you also to them." Our Lord understood how difficult it is to wipe out national and racial and religious prejudices; nevertheless He refused to soften His injunction of love. He went even further. In the midst of the hatreds surround Him, He proclaimed: "You have heard that it was said, "Thou shalt love thy neighbor and hate thy enemy.' But I tell you, love your enemies * * * pray for those who persecute you." To be pro-Christian does not mean to be anti-anybody; on the contrary, it is exactly the opposite doctrine.

God forbid that the American people should ever cease to follow the moral code which instilled in their forefathers a sense of fraternity and a desire for righteous love for one another. God forbid that they abandon the commandment of love, and thus turn their backs on their own national charter. If they do, whence can come the inspiration to treat every man as an equal in the sight of God, or the moral energy sufficient to insure every man the rights that belong to him as a person, precious to society, precious to his Maker? Not until all our citizenry regains the concept of the inherent, spiritual dignity of every man will our intranational hatreds be banished. This is the crux of the problem—as I see it—and the reason why hatred movements particularly challenge religious leaders.

EQUALITY OF ALL

We must in conscience wage battle against every philosophy that holds men to be economic or political or biological individuals only and denies them spiritual personality. All men are equal as spiritual persons and we must love all spiritual persons as equals. This is not to say that as individuals they are in every sense equal. Some are patently superior, judged by many norms. They are unequal in ability, unequal in achievement, unequal in health, unequal in opportunity, unequal in wisdom, unequal in virtue, unequal in wealth, unequal in happiness. But they are equal as spiritual persons. Even whole races, nations, and sects may excel in a certain respect, surpassing all others by their superiority in one or another regard. But when we look at those some individuals as persons, or reduce the group to an aggregate of persons, that is to say, creatures endowed with souls, all moving alike toward the single destiny of union with the Eternal God, their Father in Heaven, then we have perfect equality, and, on the basis of it, we have the inescapable obligation to love each member of our common human race.

There are men who scoff at this truth; but their scorn does not affect the soundness of the truth nor indeed its practicability. This doctrine recognizes natural groupings, the superiority of some, the inferiority of others, the special interests of all. It may sometimes even seek to discourage the intermingling of groups, under certain conditions, as detrimental to society. The Jews, for instance, were once forbidden to intermarry with the surrounding nations because of the gross idolatry that hemmed them in on every side. Other reasons make a similar policy, especially in religious matters, equally good even today. Again, in the social and economic field, one can understand that particular groups may have certain prior rights in a given locality and may resist the advent of other groups, provided the "resistance" be equitable and such as the other groups would reasonably understand were the positions reversed.

We could multiply circumstances in which a group can be regarded as a group and treated as a group, but there can never be circumstances which permit a group to stand condemned by society for the individual faults or sins of its members, especially of a minority of its members. The reason why this group condemnation, group hatred, group discrimination is wrong has nothing to do with tolerance; it is a question of simple justice.

ULTERIOR MOTIVES

There is one further thing I think should be said once and for all about group hatred as it usually manifests itself: The group-baiter finds himself in very questionable company, for most of the group hostility that is stirred up, especially in our cities, has beneath it a sinister motive of exploitation. Employers of cheap labor, holders of desirable jobs that might be threatened by competition, owners of slum properties, vested interests of every kind, these men are certainly not without ulterior motives when they raise a hue and cry against the Negro, the Catholic, or the Jew. And I make one further observation; these interests are certainly not without satisfaction and even complicity when they sit in silence while their spokesmen exploit or foster differences among the religious and racial groups of this city or elsewhere.

The Jews and the Catholics have centuries of persecution behind them in history; we have, I suppose, developed a technique in dealing with it. The problem of the Negroes is a much more serious one for the Nation. Organized opinion among the Negroes considers that the United States as the chief exponent of democracy owes it to itself as well as to them to blot out this stain of racial discrimination. They know that they have been for generations loyal Americans, contributors in conspicuous degree to our economic success. Yet, all too often, they have looked in vain for justice from our political and economic agencies. We tell them that the solution to racial intolerance lies in religion; we tell them that Christianity teaches the brotherhood of all mankind in Christ, that this brotherhood is of all races, unconcerned with the color of one's skin. All that is perfectly true—and America accepts it in principle. But there must be what popular parlance calls a practical follow-up.

RACE TOLERANCE

What if the oppressed and humiliated millions turn their back on Christianity, declaring that though it teaches the fatherhood of God, Christians act as if they did not believe the doctrine? What if these millions, in despair, turn to communism, hearing its propagandists assure them feverishly that in communism alone can they find equality? What if, in blindness, they give to that foreign ideology the numbers it has not been able to attract from the various strata of whites? How far, then, would white Christians and Jews be responsible for the deathblow such a backing of communism would give our institutions?

I can answer for the Catholic. When he fails to take a stand against race tolerance he is a slacker in the army of the church militant at a time when history's most crucial battle is being waged to determine whether the spiritual or the pagan conception of life will rule the world. Christ placed all this on a supernatural basis. He knew that once men had seen the relationship of all men to God and to one another, then it would be easier to see the dignity of one's fellow man. Only on a supernatural basis can the great truth of the brotherhood of men come to fruition. Christ identified Himself with the poor, the lowly, and no Catholic can despise a fellow man and remain a true follower of the Nazarene. The believer who considers the Negro on the basis of the color of his skin is at once untrue to his religion and blind to this great national problem.

There is no master race here in the United States, thanks be to God. God has not given to any race a monopoly of intelligence, character, or patriotism. Our country has never pretended, in principle, that He did. But our lofty principles are being contradicted, and not all the challenge is abroad. Our worst enemies are within. They are spiritual enemies; they attack our moral reserves and fortresses. So the future of our Nation, great though we are, will not be assured until we again make spiritual and moral principles, in a word, religion, the vitalizing force of our lives.

From religion are distilled justice, charity, and mercy; these are the world's greatest needs. We shall always have to struggle to preserve what we have won. But the struggle will be easy if we love one another; love our neighbor, and love him irrespective of race, creed, or color.

Tolerance such as this is no less than justice. It spells no compromise with true faith. Any devout Protestant, any believing Jew will know well how to paraphrase for himself these Catholic words:

"Truth is truth, we cannot be tolerant of error.
Right is right, we cannot hear willingly the claims of evil;
Christ to me and to millions of others is the Light of the World,
We cannot be asked to walk in darkness,
But we can be kind and loving and merciful to all."

Employment Problems

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. JUDD. Mr. Speaker, we hear so many criticisms of the United States Employment Service that I am glad to place in the RECORD, under leave to extend my remarks, a letter from a manufacturer which reveals some of the difficulties with which the Employment Service has to contend:

VALENTINE CLARK CORP.,
St. Paul, May 25, 1945.

The Honorable WALTER H. JUDD,
The House of Representatives,
Washington, D. C.

MY DEAR SIR: Just to keep your file alive on the subject of additional workers, it may be interesting to know that one of our vice presidents has put in the entire week at the United States Employment Service office in St. Paul. We were granted a priority for 10 additional workers, which is still less than our ceiling, and want to be on record that all the people in the Employment Service have been most courteous and helpful.

After interviewing a great many men, we succeeded in employing two, and since they have reported for duty the second day we can reasonably expect they may stay a while. Of course, in the meantime, five of our regular crew have decided to go fishing for a few days.

The situation seems to be rather difficult at the moment because most of the applicants have been released from defense plants like the Rosemount Powder Works, where men who handle lumber are classified as carpenter's helpers and men who handle any kind of a tool are classified as mechanics, either skilled or semiskilled. They seem to be shopping around hoping to find similar classification in civilian industry work. We have had many who would be willing to come out and manage our institution for us, but either they don't like indoor work or they don't like outdoor work or they can't stand heavy work, and it seems that the same men come back day after day waiting for the proper type of job to show up.

In due time these folks who have been improperly classified in these defense factories will adjust themselves, and I thought this angle might be interesting to you because it is an indication to us that it is probably going to be rather difficult to keep up the production schedules on defense materials for the Pacific war area.

I didn't realize that the very earnest workers in the employment office had to contend with such a difficult situation, because they are really trying hard to place the workers to best advantage.

Yours very truly,

M. H. SPERRY.

A Mining Problem of the West

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. MURDOCK. Mr. Speaker, there are many approaches to that desired goal of postwar full employment which we all hope for and seek. As a member of the House Committee on Postwar Economic Policy and Planning, I have heard this desired goal mentioned many times by very many different experts, each indicating a different approach. Today, an investment banker suggested a modification of certain recent acts and their administration, pointing particularly to the Security and Exchange Commission, if we want waiting capital to be invested and to offer this much-desired employment. As his is one approach which has received less attention thus far, I pointed to metalic mining as one field of investment which offers the most crying need of encouragement and new capital.

Coming as I do from a mining community, I offered as my chief question: What changes can and should be made in the law, or the administration of it, which would have a wholesome effect upon the mining industry? Being a layman, I stated frankly that I approached the matter of modifying our protective laws with suspicion. I recall that it was Mark Twain who, probably with more wisdom than humor, at one time remarked, "A mine is a hole in the ground owned by a liar." I never understood the meaning of this until I went with an optimistic gentleman into the mountains of the West, and he showed me a hole in the ground with some interesting looking rocks in it and about it. Said I, "What is this?" He replied, "High-grade copper ore." Then said I, "What are we waiting for? Let us get it out and take it to the smelter." "Oh, no," said he, "it is not rich enough for that, but it is rich enough to sell stock." Now, he had sold me some copper stock some time previously on another mine, but this stock I subsequently found to be on beautiful paper which had been depreciated by the printing upon it. Of course, all this happened long before 1933.

MINING NEEDS RISK CAPITAL

Members of the committee were quick to ask whether I did not want the public to have protection. Naturally I explained that I did want the fullest possible protection for the investing public, but felt it my duty to call attention to the fact that practically no risk capital from private sources is going into the development of small mines in the West. I have been told by small-mine operators that there are several reasons for this ominous fact and that some of it is chargeable to unnecessary governmental red tape. While I cannot vouch for the absolute accuracy of this diagnosis, I am distressed by the tragic fact that the important mining industry is facing this situation, and I would be remiss in not calling attention to it.

Large mines grow from small mines, but not all small mines grow large. Let it be understood that mining is a hazardous investment. I have heard men from the mining West declare that they did not want to conceal the truth or to fool anybody about mining risks and that they were willing to have stamped in big red letters on promotional mining stock certificates, "This is a gamble." What they contend is that development capital is needed to develop small mines and those who want to take a chance with their eyes wide open ought to be permitted to do so and that the law or regulations ought to be modified toward that end. Whether this can be wisely done remains a problem, but I have taken this occasion to pose the question in Congress.

War Weariness

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the Appendix, I include herewith an article entitled "War Weariness" by Malvina Lindsay, which appeared in the Washington Post on May 9:

WAR WEARINESS

(By Malvina Lindsay)

INFLATION HARVEST

Symptoms of a "back to normalcy" epidemic are showing up alarmingly. They suggest that 18 months after the end of this war the main topic of conversation may be, as in the spring of 1920, the exorbitant cost of living. They hold the possibility that American fighting men may come home to a country in which their bonds and savings are depleted in value.

These symptoms include a wave of public antagonism to OPA, stirred up by the meat shortages, stepped-up military demands, and the low-cost clothing program; increased talk of lifting war controls, and a drive on Congress to discredit controls, a let-down in moral standards by housewives who, in their zeal to get food, yield to black-market restrictions; a general war weariness and reaction against restriction.

Because of the recent OPA crisis the National League of Women Voters has sent out a call to action urging its members to enlist citizen support for retention of vigorous price control. On Capitol Hill legislative representatives of consumer groups, including 12 national women's organizations, are trying to hold the line for after-the-war rationing and price control against the guerrilla warfare of those who want to get in on the peacetime boom demand for goods before production can catch up with it.

Price-control snipers

The Price Control Act comes up for renewal next month. Consumer groups are asking that it be continued long enough after the fighting stops to prevent a postwar boom and subsequent depression such as followed the last war. They would like a renewal for 18 months instead of a year. They are also trying to prevent the act's being emasculated by crippling amendments and lack of enforcement funds. Present strategy of its opponents is to attack not the act but its administration. In the House, which holds the money bags, and which will start hearings on the act next week, lies the answer as to how effectively price control will be continued.

Biggest job, however, before the consumer groups is to combat national end-of-the-war psychology among citizens. Like the fighting man in Europe, the civilian at home dreads going on with the war now that VE-day has come. Yet his most crucial battles lie ahead—in fact, will come after complete victory. Forty percent of the inflation of World War I came after the armistice—price controls having been dropped almost as soon as the war ended. Favorite bon mot of 1919 was that the man without a dollar was 50 cents better off than he once was. In November 1918 sugar—if any could be found—was 11 cents a pound. A year and a half later it was 26½ cents. During this war the average price has been around 6½ cents.

Road to apple selling

Unhampered by food rationing, hoarders during World War I bought up large quantities of scarce articles, thus increasing shortages and forcing up prices. After the war came a rush for goods that had been scarce. There was a limited supply of goods and no price control. The result—a boom. Then production caught up with demand, exceeded it. The result—canceled orders, bankruptcy, unemployment (5,500,000 workers lost their jobs), soup lines, and apple selling.

If this folly is not repeated, women, who do the bulk of the buying in this country, will have to awaken to the fact their money management extends beyond the home, and will have to wade into problems of price control, taxes, and tariffs. They are the ones who will pay heavily in household stint and sacrifice if, by their insistence on buying what they want when they want it, or by sitting back and having no say as to what Congress does now about their postwar grocery bills, they permit another inflation era to develop.

Not only price control but other important measure, as the Bretton Woods agreements and reciprocal trade treaties, on which the stability of a world security organization largely depend, are pending now before Congress. But while a Nation watches the San Francisco Conference as if it were a football game, comparatively few citizens make the more arduous effort to understand these less spectacular measures.

It it not going to be easy for weary fighting men in Europe to shoulder their packs and start for the Orient. But no one doubts they will do it. It would seem that civilians also could get some injections of iron into their spines, overcome the urge-to-quit virus, and start grappling with the pressing problems of peace.

OPA Blind to Nation's Welfare

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. DONDERO. Mr. Speaker, under leave granted by the House of Representatives to extend my remarks, I include herein a letter from Dr. Harry G. Clark regarding the welfare of expectant mothers and their children.

It seems incredible that we in America can be so short-sighted to the Nation's welfare as to deny, through Government rationing, the essential foods required for normal health of unborn children.

This is a dangerous policy and should be corrected at once. The letter follows:

HARRY G. CLARK MEDICAL GROUP,
Detroit, Mich., May 25, 1945.

The EDITORS,
The Detroit Medical News,
Detroit, Mich.

DEAR DR. LIGHTBODY: When a baby is born, the mother all of a sudden receives twice as many meat and fat points as she received the day before. This baby did not suddenly come into being even though it did suddenly come into view. The only change that occurred was that prior to birth the baby was a parasite on the mother and was a drain on the mother's food supply, while afterward it was not. The double supply of points should have been allotted as soon as the mother became pregnant.

We are having a famine and are facing a worse famine in proteins and fats. This is important to the normal person but it is a serious and grave consideration for the pregnant woman. Anemia, edema, miscarriage, prematurity, and perhaps eclampsia have all been traced to a deprivation of proteins in the mother—an increased death rate, prematurity, malformations, and general debility are the lot of the baby. In protein starved France during the German occupation, there was a saying apropos pregnancy, that a woman might have—"One baby, yes; two babies, maybe, and three babies, never." In most countries, including Great Britain, pregnant women had an allotment of more and better food than the average person—should this not occur in the United States also?

I am writing this in hope that the Detroit Medical Journal will print it—that it will be copied at once by other medical journals, and also, the newspapers. By so doing, it may be brought to the attention of the Office of Price Administration immediately whereas if this communication were sent through the usual Government channels it might be answered by a clerk, or lost track of entirely.

The national death rate is rising during this last year. This change in the distribution of food is urgent and important. It can be changed by a simple directive from Washington. Every woman certified by a physician to be pregnant should have double the number of meat and fat points as the average individual.

I am sending copies of this communication to the local Office of Price Administration, the head Office of Price Administration in Washington, and to Dr. Fishbein, so that there may be action taken before too much harm is done to our expectant mother.

Yours very sincerely,

HARRY G. CLARK, M. D.

Copy to Congressman GEORGE DONDERO.

The OWI

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. LUDLOW. Mr. Speaker, by unanimous consent, I present for printing in the CONGRESSIONAL RECORD two articles by Ernest Lindley expressing his views on the Office of War Information, as follows:

[From the Washington Post of May 28, 1945]

GERMANY AND NEWS

(By Ernest Lindley)

WAS ELMER DAVIS RIGHT?

Elmer Davis, it has become apparent, was right in saying that the German diet of information would be "what the doctors prescribe." The Allies will control closely, for a time, news and opinion published in Germany. They will do more than that. They themselves will gather and disseminate most of the information which the Germans read, hear over the radio, or see at the movies.

No one would maintain that the Nazi propaganda machine should be allowed to continue to function. But this machine embraced the entire press, the entire radio, the movies—all channels of communication. When it is liquidated nothing is left. There is no remnant of a free democratic press or radio. There is not even a corps of journalists with even so elementary a qualification as respect for facts.

Gradually some Germans may emerge who can be trusted with newspapers or radio stations or publishing houses. But their ability to discharge these responsibilities, which are so completely intertwined with the reeducation and reformation of the German people, will have to be thoroughly tested. To leave these powerful weapons in German hands now would be foolish.

The other choices are, roughly: (1) to leave Germany "blacked out" with no published information on current events; (2) to let the Germans get what they can from publications from abroad; (3) to give them what the Allies think is good for them through radio programs, newspapers, newsreels, and pamphlets published by the Allies or under Allied supervision.

A "black-out" would not serve any good purpose. The ailments of the German people have been aggravated by the "blacking out" for years of everything except Nazi

propaganda. An even more thorough "blackout" now would leave the effects of these years of propaganda uncorrected. In fact, the propaganda can be expected to continue by word of mouth and underground publications.

The second alternative—permitting the Germans to pick up what they can from publications and radio programs from abroad—would not go very far in itself toward improving the situation. And it contains, at this stage, many serious dangers. Even in the bona fide, privately owned and unsubsidized press of the United States and Britain there are some publications which it would not be good for the Germans to read. And the door would be open to every type of subsidized ax-grinding, including outright Fascist propaganda.

Even without considering these dangers, the second choice would mean muffing an opportunity. This is the time to begin to re-orient the German mind. One of the first tasks is to present to the Germans some of the facts about the war. This can be done through pamphlets, movies, and by other means. It is a special job requiring special handling. And it is important that the Germans should not be diverted from this elementary reeducation by an abundance of other material to read, see, and hear.

The course adopted is the only one which is both safe and potentially constructive. The Germans are to be given simple factual information about current events. Until a corps of competent and trustworthy Germans can be built up this information will have to be prepared and disseminated by Allied authorities—through newspapers, and movies, and over the radio. In addition, the Germans will be given information about past events which they have hitherto seen only through the distorted lenses of Nazi propaganda.

Gradually, as conditions permit, this simple, wholesome diet can be expanded. This regimen will not be easy to manage. The doctors are only too likely to disagree. What the Germans hear over radio stations in Russian hands is likely to be different from what they hear over radio stations in American or British hands. But certainly we want the American story to be told as well and widely and as thoroughly as possible. It will not be told unless we see that it is told.

[From the Washington Post of May 30, 1945]

KEEP O. W. I.

(By Ernest Lindley)

TELL THE AMERICAN STORY

Most of the Continent of Europe was fed Nazi propaganda for from 3 to 5 years. From some countries, which we want to be friendly to us, the lid has been lifted only within the last 3 weeks.

There are a great many facts about us those peoples do not know, but which in justice they should know or be made to realize. For example:

They should know what prodigious contributions the United States made to the defeat of Germany and the liberation of Europe, and how they were made.

They should know that simultaneously we have been waging with brilliant success a great war against Japan and that the completion of that war is our first order of business and is of vital concern to them, too.

They should understand why, largely because of the great war with Japan, we cannot provide promptly as much economic help as many of our friends in Europe want or think they should have.

They should know what our peace objectives are and what kind of people we are. Many of them had a favorable opinion of us before the war, but they have been fed on distortions for several years. And, remembering the aftermath of the First World War, many of them may not realize that there has been a fundamental change in American policy: that we intend to see this time that the peace is organized to the best of our ability, that we are not going to withdraw.

These are a few of the things which we need to drill into the heads of the peoples of Europe by every means at our command. They will not find them out by themselves.

We cannot expect our big allies to tell the American story as we would like to have it told. The Russians have been chary of admitting even to their own people the extent of the American contribution to the war. Outside Russia, they advertise the Red Army, not the American lend-lease which put the Red Army on wheels, or the American Air Force or the American Navy or the American merchant marine. The British, who are more factual and more generous in their acknowledgments, are naturally interested in building up their own prestige. The French, too, have their own axes to grind.

Our influence at this critical juncture depends largely upon the broadcasting of the facts about what we have done and what we intend to do, and why. No one will do this for us. And privately managed American agencies, such as the press associations and magazines, can do it only in part. Someone has to see that the American story, present and past, is told in the French and Norwegian and Belgian press, that it is heard over the radio stations of these and other friendly nations, and that it appears in the movies which are shown in these countries and in special pictorial exhibits and in pamphlets.

Yet at this very time, when a tremendous job needs to be done for the United States, some of the Members of Congress seem to want to cripple our chief instrument for doing it—the Office of War Information. The OWI, on its own account, planned to curtail its European operations—possibly too much over all. Their character must change in part. But during the next year or two every means at our collective disposal must be used to put our story before the people of Europe. This requires not only the transmission of information and the preparation of a great deal of special material for pamphlets and movies and other agencies of communication, but daily personal contacts with editors, public officials, and other key people in other nations, to see that the information is disseminated. It is not an easy job. It requires men with experience, perseverance, and resourcefulness.

The Russians and the British are not cutting down their propaganda or information services in Europe or anywhere else that such services can be of any value to them. It we cut down ours, it is not their loss.

Today the Tariff Has Deeper Meaning

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette, Little Rock, Ark., for May 29, 1945:

TODAY THE TARIFF HAS DEEPER MEANING

We have always had the tariff as an issue in the United States, but never before has it carried so deep meaning for the future of this country.

After the tragic disappointment the American people suffered by having a Second World War only 25 years after the first great struggle, the conviction was borne home that not peace and safety but war and danger may follow political isolationism.

When Chairman DOUGHTON, of the Ways and Means Committee, spoke for the bill to extend the Reciprocal Trade Agreements Act he said that here was the first real test to show whether the United States is willing to join in international cooperation or is going back to both political and economic isolation. He told the House that many nations soon would make decisions whethey they would move toward freer trade or toward "narrow economic nationalism," with tariffs, quotas, subsidies, discriminations, and government control of foreign trade. And Joseph C. Grew, Acting Secretary of State, said the future of the trade agreements bill might well tilt the whole international balance one way or the other.

The House passed this measure 239 to 153, with President Truman appealing directly for favorable action. Democratic spokesmen declared that the vote would show whether America wants to cooperate with other nations or become isolationist, and that the action of the House would be watched by United Nations delegates at San Francisco.

If the Extension Act is not passed by the Senate, where some current circumstances are unfavorable, the San Francisco agreement will lack a certain force and appeal, and the nations might again engage in economic warfare which would hold threat for good relations and the future peace of the world.

Expense Allowance For Members of Congress

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. BRYSON. Mr. Speaker, in the CONGRESSIONAL RECORD of May 10 on page 4428 the gentleman from Georgia [Mr. TARVER] made a statement with reference to the rule providing for the consideration of $2,500 expense allowance to Members of Congress. The statement is as follows:

Therefore, the only roll-call vote which can be had on this question would be a roll-call vote on the adoption of this rule. Upon such a roll call those favoring the adoption of the rule would be voting in favor of this $2,500 per Member appropriation, while those opposing the adoption of the rule would be voting against it.

On page 4434 of the RECORD, roll call No. 75, my name is listed among those voting against the adoption of the rule which was as above stated, a vote against the expense allowance.

I then felt and now feel that making any additional allowance to ourselves at this time is a mistake regardless as to how great the need is therefor.

I have found by practicing rigid economy it is possible to live on the salary now provided for the Members of Congress, and I have always felt the honor to be a Member of this great body is the highest compensation of all.

It is encouraging to know that the newspapers generally, and especially in my district, have views similar to my own regarding this matter.

I insert herewith editorials from the Spartanburg Herald and the Greenville News of May 30, 1945:

NO TIME FOR CONGRESSMEN TO RAISE PAY

On Monday the United States Senate voted down an appropriation bill clause that would have provided a $2,500 raise in expense money for each of its Members.

This action followed previous approval by the House of the same amount of expense money for its Members. Thus, there is, in actuality, a salary difference between the two parts of Congress.

Various arguments have been presented to justify the appropriation of expense funds for Congressmen. It has been shown that living costs in Washington have boomed; that travel expenses are higher; that Congressmen are expected to maintain a high standard of living; that there is an increasing demand upon Members for things that call for higher expenses.

In fact, however, we suspect that the real reason for the consideration of "expense money" in Congress is that Members feel that is one method of voting themselves a raise with least complaint from their constituents.

Regardless of the real cause, we do not feel that this is the time for Congressmen to take such action. The Little Steel formula has controlled and limited wage increases for industry. Excess profits tax has kept the businessman from making huge profits as during other periods of high demand for their products. The so-called white-collar worker has not been raised in proportion to higher living expenses. Last—and most important—the American fighting man has not received large recompense for offering his life on the battlefield. We do not believe the Congressman is in greater need of expense money than these others.

If Congressmen feel their expenses have increased so greatly, then they should go about getting a raise in a different manner. While the average person's taxes rise in an ever-expanding ratio as his income goes up, the House-approved expense money is tax-free. This does not seem cricket in view of national conditions at this time.

Some Members of the House will have to do some explaining later to justify their action. If the Senate can stand the high cost of living in Washington without a raise, House Members will be hard put to prove their needs.

THE SENATE AND PAY RAISE

The action of the United States Senate in turning down the opportunity to vote its Members an additional $2,500 each for tax-free "expenses" may come as something of a surprise, for most of the political prophets had been predicting that the Senate would go along with this House idea and include its own Members among the beneficiaries.

But the Senate vote in refusing this extra money for itself reflects, we think, a wholesome appraisal of a strong public sentiment that such an action would be highly inappropriate at this time; and by the same token its decision is an implicit rebuke to the House. For while the Senate has felt that the principle of "comity" between the two Houses should cause it to refrain from interfering with the House decision as to its appropriations for itself, it has said in effect that the additional "expense" allowance is unwise and unjustified, for it is obvious that there can be no better reason for such funds for Representatives than for Senators.

Certain Washington advices indicate that the organized-labor leaders have been watching the course of this legislation with the keenest interest, since its adoption for both Houses would provide the very best example and precedent they could want for more vigorous demands for an elimination of the wage-stabilization formula and a very substantial increase in hourly wages throughout industry.

For the effect of the legislation is, to give the House Members much more than a 20-percent raise in income. On its face, it figures a 20-percent increase, but it must be remembered that by using the dodge of voting this money as expense it is not subject to income taxes. Such an untaxed addition to an income of $10,000 would thus work out to 30 percent or more, on a basis of strict comparison with wage earners who might get a raise which would be taxable.

In view of the Senate's action, we wonder if the House will not now see the wisdom and propriety of retreating from its own much-criticized position; or at the very least making its additional income fully subject to taxation?

Foreign Trade and Shipping

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. COLMER. Mr. Speaker, under leave to extend my remarks I should like to have placed into the RECORD two editorials with reference to the Sixth Report of the Special House Committee on Postwar Economic Policy and Planning on the subject of Foreign Trade and Shipping, which was recently released by our committee.

The editorials, which appeared in the Providence (R. I.) Journal and the Gulfport-Biloxi (Miss.) Daily Herald, respectively, are as follows:

FREEDOM OF TRADE

The report of the Colmer committee, setting forth the views of the lower House of Congress on postwar international economic cooperation, takes in general a most enlightened attitude toward this major problem.

It is noteworthy that it endorses the International Bank provision of the Bretton Woods agreement but avoids approval of the Monetary Fund portion of that pact. It recognizes however, a need for establishing an international pool of currencies to stabilize foreign exchanges in the interest of a smooth-flowing world commerce. Presumably it believes such an objective can be achieved through the International Bank, although the published summary of its report is not specific on this point.

Likewise significant is the committee's recommendation that the Government should subsidize such portion of our postwar merchant marine as may be essential to national defense, charging the cost thereof to the national-defense budget. But the remainder of our ocean merchant shipping, in its opinion, should take its chances in international competition without benefit of Federal financial aid. That is sound reasoning if an equitable basis can be found for making such distinctions.

The committee's conviction that the resources of the Export-Import Bank should be enlarged so that it will be better equipped to make "developmental loans which would be beneficial to our international position" is in keeping with established administration policy. It conforms also with what far-sighted American businessmen and economists deem to be a sound postwar economic procedure for this Nation. The committee's advocacy of repeal of the Johnson Act prohibiting private foreign loans to countries in default on previous borrowing is in keeping with the present sentiment of the country.

Its denunciation of cartel agreements and its emphasis on the necessity to take every proper step to prevent the establishment by any nation of artificial barriers to the flow of international commerce and currency are in harmony with progressive economic thought. It is encouraging to know that the House, if it accepts the guidance of the Colmer committee, can be a constructive influence in shaping America's course in any future international conference that may be convened to consider all of these fundamentally important economic matters.

The committee's recommendation that an international meeting be called to establish concerted action on all policies with respect to commerce between nations, particularly in relation to permanent avoidance of such arbitrary restrictions as were imposed by various nations after the First World War, should be heeded. For such an agreement could be made one of the foundation stones on which to build a better economic order. Upon such building we must depend in no small degree for the future stability and security of the world.

AN IMPORTANT REPORT

The sixth report of the House Special Committee on Postwar Economic Planning treats in 55 pages of our postwar foreign economic policy and other kindred and basic underlying matters, but space does not allow even a full condensation nor an elaborate review here, and its volume and importance are so elaborate and extensive that we cannot give it the commentary nor the adequate time, study, and industry which preceded its conclusions. It is very full in detail treatment and specific recommendations based on fully argued bases. The foreign economic policies are said to be intended "to establish the economic foundations of a durable peace and to assist in providing high and expanding levels of income at home and abroad," yet preserving the principles of individual freedom and private initiative. The belief is expressed that high levels of output and employment at home are required for expanded world trade, and that the measures the committee suggests are intended to enable this country and all others to enjoy the lasting benefits of a larger and expanding volume of world trade. Reciprocal trade will secure foreign products and essential raw materials for certain American agricultural and manufactured products.

Payments for American exports must be in dollars, says the committee, acquired by foreigners primarily (1) by sales of their goods and services to us, (2) through interest, profits, and dividends made here by other countries in the past. Extensive foreign postwar investments by the United States will benefit this country and the world, it is argued; opportunity for which will come from scarcity of capital in undeveloped and devasted regions; if loans are made on a productive basis, it will bring industrial expansion and benefit both borrower and lender. To encourage all this, the committee recommends (1) Establish the International Bank for Reconstruction and Development; (2) Increase the resources of the Export-Import Bank to increase its lending power; (3) Remove restrictions of the Johnson Act on our foreign loans; (4) Clear and prompt understanding on settlement by lend-lease obligations.

Our postwar international monetary system must be free of restrictive control; therefore, there must be exchange-rates agreements at levels to create a balanced condition in each country; to help do this; establish an international reserve of foreign currencies.

The committee believes that a postwar international conference should be called * * * to establish a general policy of reducing trade barriers, which would aid foreign and domestic businessmen in making

plans. The Reciprocal Trade Agreements Act should be extended. It would eliminate certain private practices as fixing world prices, division of markets, allocation of export quotas, etc. Restriction of other private practices mentioned, should be registered for vigilant consideration.

The need of American flag merchant shipping is recognized for national security and peace, and operation and construction subsidies recommended.

The above condensation gives but scant review of the research, hearings, consideration, comprehensiveness, and broad outlook found in the report, sustained by astute analysis and argument.

Down here, we are honored and pleased that our Congressman, W. M. COLMER, is chairman of this important committee, whose report to Congress deserves and will receive profound study and the most careful consideration. The committee deserves much credit for its very valuable work for postwar policies.

Sugar Shortage

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. REED of New York. Mr. Speaker, I have been following the sugar shortage program of the New Deal with interest and alarm. The Administration has been so inefficient in other fields of endeavor that I had misgivings when the Government took over the complete control of sugar in 1941. Once the New Deal obtained control of sugar it forgot the importance of proper production, distribution, and price incentive; but instead it directed its energies to political appointments. Thus a major problem vital to the war effort abroad and to the home front, was placed in the hands of inexperienced persons rather than calling into the service experienced and expert sugar producers and distributors to handle this very vital food product.

There is no use in dwelling on the mistakes that have brought on one of the most critical food dislocations in the history of our Nation, because that will not cure the shortage of sugar which now confronts the farmers and good processors. Public opinion ought to be brought to bear immediately upon the administration in a effort to have it appoint a man of ability to replace the present inefficient bureaucratic management of the sugar situation, and take immediate steps to procure certain supplies which could be made available to the United States. Delay in dealing intelligently and promptly with the problem will mean not only a critical shortage this year but a sugar famine next year.

The task of underwriting the present as well as the future sugar supply of this Nation is not one for inexperienced men to tamper with. There are men who have lived with the problem of sugar production and distribution over a period of many years who, if given the opportunity, could and would take hold of this problem, and relieve the situation before it is too late.

I live in and represent a fruit-growing area. This is no time, when the world is crying for food, to permit a group of bureaucratic incompetents to force the fruit growers and the housewives to see good fruit waste and rot for want of sugar to preserve it. Sugar can be obtained under a proper administration.

Atmosphere of "Hate" in White House Cleared by Truman, Says Observer

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Frank R. Kent, which appeared in the Evening Star, Washington, D. C., May 30, 1945:

THE GREAT GAME OF POLITICS—ATMOSPHERE OF "HATE" IN WHITE HOUSE CLEARED BY TRUMAN, SAYS OBSERVER

(By Frank R. Kent)

In various publications there have appeared recently extended reviews of President Truman's "First Forty Days" in office. Almost unanimously these have reflected the feeling that he is functioning in a competent and highly encouraging manner. His Cabinet changes have been commended; his tax views indorsed; his steps toward coordination applauded; his reorganization plans approved; his clearheadedness admired.

But the most salutary thing achieved has not had quite the attention it deserves. It consists of an atmospheric change about the White House which has been noted by numerous observers, though not recognized for what it is by all.

What Mr. Truman has done is practically to clear the air of the hate with which for a long period it had been heavily saturated. The new President seems not to hate anyone very much, and no one—not even Republicans—appears to hate him at all.

It may be that in the course of time he will develop enemies and acquire aversions. It is inevitable that any President serving more than one term should do both. But, certainly, Mr. Roosevelt had more of each than any of his predecessors. Partly that was due to the fact that he had been President longer than anyone else, but partly also to the character of his policies and the flavor of his personality.

LENGTHY BLACK LIST

To be sure, he made friends as well as foes, but he did cherish grudges inordinately and his blacklist surpassed in bitterness and length any other. During his administrations there not only was very real hate between the two parties but there was besides intense factional, class, and individual bitterness.

In this administration this hate has largely disappeared. Not only does Mr. Truman seem to have no blacklist but the terrific antagonism between New Deal and anti-New Deal Democrats has diminished. There has been an increase of tolerance all along the line.

How long this will last no one can say, but it is refreshing and generally welcome at the moment. It is more than that; it is distinctly in the national interests.

The best illustration of the cleared air was Mr. Truman's invitation last week to ex-President Hoover and Mr. Hoover's prompt acceptance of the opportunity to discuss with the President food distribution and war relief, subjects upon which, by virtue of his experience, he is concededly the outstanding world authority. The Hoover invitation was followed by friendly, though general, invitations to Governor Dewey and ex-Governor Landon, the two other living Republican Presidential nominees.

But the Hoover visit was of real significance, as in his case a specific date had been fixed and his advice asked on specific subjects. And because, too, for 12 years Mr. Hoover's name had been high on the White House blacklist. After we got into the war, though he was always available, Mr. Hoover was never called into consultation nor permitted to make the kind of contribution to the war effort for which he was so clearly equipped.

Particularly was this omission notable in connection with food distribution and control. It is hard to contend that this vital business has not been badly managed. That two food administrators resigned, that the set-up was scathingly criticized by a Democratic investigating committee, and that last week the President changed the machinery and moved to bring about the coordination long demanded—these things constitute convincing evidence of trouble.

MUTUAL ESTEEM

To cap it all, Mr. Truman invites the hated Hoover to come down and advise with him about the food emergency. This is the more interesting as Mr. Hoover not only had been blacklisted for 12 years, but had been the favorite target for administration propagandists who never tired of repeating the libels that he was personally responsible for the last depression; that he forced veterans of the last war to sell apples on the streets; that he was a reactionary tool of the moneyed interests with no sympathy for the common man, and so forth.

No public man of our time has been more misrepresented and maligned. That after 12 years of this sort of thing, Mr. Truman should ask Mr. Hoover to the White House to talk of food and other things shows that he has no intention whatever of taking over the Roosevelt personal likes and dislikes. The Truman-Hoover conference seems to have been mutually agreeable and to have developed mutual esteem.

Whether it will go beyond that is doubtful, but at least it is encouraging to know that, for a while anyhow, the hating days are over, and that men such as Mr. Hoover, Senator Byrd, Senator Taft, Mr. James Farley, and others are no longer regarded in high administration circles as vicious or ignorant or both.

Perhaps, too, with the President making it clear that he does not feel that those not in accord with him politically are necessarily devoid of honor and destitute of shame, there may be a decrease in bitterness among all save those incurably sour New Deal products unable to flourish in any other soil. There is nothing so helpful as tolerance at the top.

Pfc John Randolph McKinney

EXTENSION OF REMARKS
OF
HON. HUGH PETERSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. PETERSON of Georgia. Mr. Speaker, one of the most outstanding

feats of valor in this entire war is that of Pfc John Randolph McKinney, of Sylvania, Screven County, Ga., as related in a special news dispatch appearing in the Atlanta Journal of Monday, May 28, 1945, and I ask unanimous consent to place this article in the RECORD.

I am naturally proud that Private First Class McKinney is a citizen of one of the counties which I have the honor to represent in Congress. His almost superhuman achievements are such as to stir the imagination and thrill the heart of every American citizen. His family and his friends have every right to be proud of him and of the marvelous record that he is making in so effectively destroying the enemy. His dauntless courage and undying valor typifies the spirit with which the men in our armed forces are fighting our Nation's battles, and such fantastic feats as this should arouse each of us to an equal degree of patriotic effort in bringing this dreadful war to an early end so that these fine young men may again turn their faces homeward and be reunited with their families and loved ones.

The article above referred to is as follows:

SYLVANIA CYCLONE IN ACTION—GEORGIA FARM BOY KILLS 36 JAPS IN SUPERHUMAN, ONE-MAN STAND—PRIVATE FIRST CLASS MCKINNEY'S FEAT ON LUZON RIVALS SERGEANT YORK IN LAST WAR

(By Gerald R. Thorp)

WITH THE THIRTY-THIRD DIVISION IN NORTHERN LUZON, May 23.—Pfc John Randolph McKinney, slight, wiry Georgia farm boy, today became one of America's all-time war heroes when his buddies revealed that he had killed 36 Japanese in a single combat mission.

McKinney, blond, blue-eyed, 140-pounder, previously had knocked off a dozen Nips, so his total now stands at 48. His parents, Mr. and Mrs. D. H. McKinney, have a farm near Sylvania, Ga.

The 24-year-old southerner was with a task force of this veteran division's One Hundred and Twenty-third Infantry a few days ago. He had just gone to sleep in his pup tent after standing guard on the perimeter. What happened there is McKinney's own story, substantiated by the men who saw the Georgia cyclone in action:

"I was just about getting to sleep in my tent when I heard a noise. I thought it was some of my buddies and yelled, 'What the hell's wrong out there?'

"I happened to look at the entrance of the tent and saw two Nips out there hackin' at the tent with sabers. I crawled out the back and konked one of 'em over the head. That took care of him. Then I shot the other one.

"I saw the cover come off our machine gun a few yards away and thought it was one of our boys getting it ready for action. I ran over to help him, but it turned out to be a Nip. I had to shoot him, too.

"My ammunition was almost gone, so I started for the command post to get some. Two Japs tried to cut me off and I killed them. About that time I heard one of my buddies calling, saying he was hit. I went over to him and asked him if he had a rifle. He did, so I took it and fired what ammunition there was in it.

"I got another one from the tent and jumped into a hole with the machine gun. There were 60 or so Japs comin' across from a sandbar in the river, so I let go a couple of bursts and watched 'em drop."

HIT BY POLE

"Then I got hit on the head by a pole and all at once that hole got awful crowded. Ten or fifteen Japs piled in. Every one was sluggin' at me, but mostly they just hit each other. I managed to do a little shootin'. Some of 'em I just stroked over the head with my rifle. Later, I found out I had killed eight in and around the hole.

"I tried to drag the gun away but I couldn't quite make it. It wasn't light yet, so I ran for the tent and dug out all the rifles there and threw 'em in the bushes. The Japs were at the machine gun again, so I started firing. My M-1 jammed and I got another one outa the bushes and kept shootin', drivin' 'em away from the machine gun.

"The wounded man said he was losin' lots of blood. I called Red Barrette (Pfc Adolph Barrette, of Sheboygan, Mich.) and told him to put a tourniquet on the guy's arm."

COVERS RED

"Red had to go to the tent for a first-aid kit and the Japs were throwing lots of stuff at him. So I fired right over his back to keep 'em off while he got the kit. All the time Red was puttin' on the tourniquet this wounded fellow kept yellin' at me, asking me 'How'm I doin'?'

"After that, Red joined me and we knocked off some more with our M-1's. He got six himself. The Japs were about all gone then when a machine-gunner opened up from the beach. I fired a few times and killed him. Another one ran for the gun and I shot him. There was another Nip on the beach firing a knee mortar. He caught one of mine through the head.

"There was just one more Nip left. A guerrilla was chasin' him, cuttin' hunks of flesh out of the guy with his saber. It more or less looked to me like this guerrilla was playing with the Nip. I figured I might as well get him, too, so I did.

"Well, I guess that's everything. Maybe I left out somethin', but you know how it is when you're busy like that. It's kinda hard to remember all the details."

McKinney knew how to shoot long before he entered the Army in September 1942. He did his target practicing on the farm between chores. He has been overseas since May 9, 1944.

TO LEAVE FRONT

McKinney, shy and drawling, will be relieved of his hazardous duty immediately in accordance with an order from the Sixth Army Headquarters.

Capt. Harry Ice, Oklahoma City, Okla., all-American football player from the University of Missouri and commander of Company A of McKinney's outfit, added more details to the incredible story of the Georgian's one-man stand against the Japs.

McKinney was with a force operating on the Umiray River, on the east coast of Central Luzon. The Nips were continually sifting down the coast from the north but Ice's company had disposed of all of them, killing 228 and capturing 6 without having a man wounded.

Clad only in his shirt, shorts, and shoes, the Georgian was the main factor in stopping a suicidal banzai attack by more than 100 Japs. There were 13 Americans and a few guerrillas in the area. During the time he was performing his superhuman feat, the Japs were firing in a frenzy at the wraith-like figure who seemed to be everywhere at once.

When enemy fire dwindled to almost nothing, McKinney discovered that all the Japs in the attack were either dead or had fled. McKinney came out of the slaughter with only a slight scratch on his left ear.

When Nips first came into the area that morning they had hidden in civilian huts, killing several natives and bayonetting a few babies. The Nips wore native broad-brimmed hats and began their attack by howling and screaming.

"If Japs had advanced 10 more yards before McKinney went into action it would have been just too bad," said Captain Ice.

"It's hard to tell you much about McKinney," the captain added. "He's one of those boys who has always done his job."

Postmastership, Cleveland, Ohio

REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. FEIGHAN. Mr. Speaker, the nomination of Mr. Guy R. Lucas to the office of postmaster of Cleveland, Ohio, was sent yesterday by the President to the Senate, and confirmed by that body on the same day, after Senator BURTON hurriedly made a unanimous consent request to consider the nomination. The swift action of the Senate came as a surprise to me. This post office is situated in the Twentieth Ohio District, which I have the honor to represent.

Upon learning early Wednesday morning that this nomination was contemplated, I endeavored to speak with the President, but was unable to do so. Wednesday morning, I sent a special delivery letter to the President, a copy of which will be appended to my remarks.

Upon hearing that the nomination was sent to the Senate, I immediately telephoned Senator MCKELLAR, chairman of the Committee on Post Offices and Post Roads, who, at the time, was presiding in the Senate, which was in session. I requested his office to have the Senator return my call. I then sent a letter to him requesting an opportunity to be heard before the committee when the qualifications of Mr. Lucas were to be considered. The letter did not reach Senator MCKELLAR while the Senate was in session. When the Senate adjourned, Senator MCKELLAR left the chair and returned my call. When I apprised him of the situation, he stated that if I had reached him in time, I would have had an opportunity to be heard before his committee. Time did not permit my reaching him earlier.

In my opinion, the President has been misled in this matter because the people who made the investigation have apparently not given him all the facts.

A thorough investigation of Mr. Lucas would have disclosed barriers to his selection.

Mr. Lucas has admitted activity in violation of United States Code, title 18, section 211—section 51, paragraph 3, Postal Laws and Regulations—which reads as follows:

No officer, clerk, or other person in the service of the United States shall, directly or indirectly, give or hand over to any other officer, clerk, or person in the service of the United States, or to any Senate or Member of or Delegate to Congress, or Resident Commisisoner, any money or other valuable thing on account of or to be applied to the promotion of any political object whatever.

The penalty statute for this offense reads as follows:

Whoever shall violate any provision of sections 208-211 of this title shall be fined not

more than $5,000, or imprisoned not more than 3 years, or both. (U. S. C., title 18, sec. 212.)

Another section of the criminal code reads as follows:

No person shall, in any room or building occupied in the discharge of official duties by any officer or employee of the United States mentioned in section 208 of this title, or in any navy yard, fort, or arsenal, solicit in any manner whatever or receive any contribution of money or other thing of value for any political purpose whatever. (U. S. C., title 18, sec.209.)

Violation of which is also subject to penalty under section 212 just stated.

Any man who admitted activity in violation of the above referred to section 211 is not qualified to assume the duties of the high office of postmaster of Cleveland.

Moreover, if Mr. Lucas becomes postmaster, we will have the sordid spectacle of the person who admitted activity in violation of section 209 of the United States Code, title 18, by accepting political contributions, having been relieved of the office of postmaster in 1933 and the person who admitted activity in violation of section 211 of the Code, namely, making a political contribution in violation of the law, later being appointed and confirmed to the very same office of postmaster under Democratic administrations. Why was it better to give than to receive on this occasion?

This, in my opinion, casts an unsavory reflection upon the present Democratic administration.

The Postmaster General had promised to consult with me before any nomination to the office of postmaster of the city of Cleveland would be made, but I did not hear from the Postmaster General.

Since 1935 Mr. Lucas has been one of the five members of the Cleveland post-office cafeteria committee, which has complete charge of the operation of the cafeteria. Numerous postal employee unions have made complaints because of the inefficient operation of this cafeteria, with special reference to the high prices. I brought those complaints to the attention of the Post Office Department. Upon inquiry, I was informed that the post-office cafeteria commitee paid, for the purchase of meat, 35 percent in excess of the amount that was paid by other purchasers to the same packer. Mr. Lucas, as a member and secretary of this committee, to my knowledge, never raised his voice in protest. If Mr. Lucas had knowledge of this practice, he was derelict in his duty by failing to take action to correct it. If Mr. Lucas did not have knowledge of this practice, he was derelict in discharging his responsibility as a member of the cafeteria committee. Only after the unions registered their complaints was an investigation made by the Post Office Department, following which cafeteria prices were reduced 16 to 20 percent.

It is my information that Mr. Lucas had promised promotions to postal employees as a reward if they succeeded in obtaining my recommendation of him for postmaster. I believe promotions should be granted upon merit and outstanding ability.

These are some of the reasons why I am convinced that Mr. Lucas is not qualified to assume the duties of postmaster of Cleveland.

My remarks are not motivated by any feeling of vindictiveness because the long-established custom of honoring the recommendation of the Representative of the district in which the post office is situated has been disregarded. I am making these remarks so that my constituents may know that the nomination of Mr. Lucas and the confirmation which followed swiftly in the Senate were made without consultation with me, and that I disclaim all responsibility for the appointment of this man, whose record I consider disqualifies him for the position.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 30, 1945.

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Word has been received by me that you plan to nominate for the office of postmaster in Cleveland, Ohio, Mr. Guy R. Lucas.

The Cleveland post office is located in the Twentieth Ohio District, which I represent. I have not been consulted, and I believe firmly that I should be consulted.

As far as Mr. Guy R. Lucas is concerned, I have information bearing upon his qualifications for this position, which might possibly eliminate him from any serious consideration. Therefore, I have requested an appointment with you at your earliest convenience.

Very truly yours,

MICHAEL A. FEIGHAN.

Selective Service as the Tide of War Turns

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 1, 1945

Mr. JONKMAN. Mr. Speaker, there was delivered to my office this morning an elaborately bound copy of the Third Report of the Director of Selective Service entitled "Selective Service as the Tide of War Turns," printed at the United States Government Printing Office.

The volume comprises 666 pages, is illustrated in a great many instances and is printed on machine-coated book paper.

I have today checked with the Government Printing Office and now disclose the following officially reported facts and figures:

Total number of copies ordered and printed for the Selective Service System for its distribution were 65,641.

Each bound volume weighs 2 pounds and 10 ounces.

The total number of copies printed required the use of 140,000 pounds of paper.

The total cost of printing and binding these volumes was approximately $45,000, with the following break-down: Cost of paper $10,000, cost of composition $17,800, and cost of binding $16,600.

I shall not speak of the printed contents of the volume, but those who receive copies can without question draw their own conclusions as to its alleged value as compared to the foregoing stated enormous cost of printing and binding the same.

Private industry of printing houses, newspapers, and so forth, in my district and in fact the country over are just not able to get sufficient paper stocks to carry on.

If this costly volume has been printed as a monument to General Hershey and the Selective Service System he and it are possibly entitled to this false honor at the expense of the taxpayers.

The American Veterans of World War II

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 1, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement relative to the organization of the American Veterans of World War II:

FELLOW COMRADES: The American Veterans of World War II was formed by veterans of World War II for veterans of this war, to assist in building a bigger and better United States, in reestablishing the veteran when he returns to civilian life, in getting jobs, looking after the welfare of the veteran's family, sponsoring education, and working for the greatest over-all benefits of the veteran of World War II.

ORGANIZATION

The American Veterans of World War II (AMVETS) was established at a conference held in Kansas City, Mo., December 9 and 10, 1944. Independent veterans' groups from every section of the United States were in attendance and merged into one national group known as the AMVETS, with national headquarters at 1507 M Street NW., Washington 5, D. C. Officers were elected and all members were directed to engage in a positive progressive program with the view of making the AMVETS the outstanding veterans' organization in the United States.

National commander: Elmo W. Keel, Washington, D. C.

Vice commanders: First, George E. Burke, St. Petersburg, Fla.; second, Rudolph Ruzicka, Cincinnati, Ohio.

Executive committee: William Blake, Buffalo, N. Y., George E. Burke, St. Petersburg, Fla.; Joseph Motta, Providence, R. I.; Floyd Cooper, Jr., Amarillo, Tex.; Jimmy Linn, Shreveport, La.; Col. E. E. Linsert (chairman, finance committee), New Orleans, La.; M. J. Perrino, Charlotte, N. C.; Thomas Bulman, Tucson, Ariz.; Edward Trudell, Boston, Mass.; Floyd Williams, Arlington, Va.; Edward Weisenberg, Bethlehem, Pa.

Finance officers: Col. E. E. Linsert, New Orleans, La.; Carl G. Freudenberg, Cincinnati, Ohio.

Judge advocate: T. Paul Moody, Los Angeles, Calif.

National executive secretary: Albert C. Geremia, Providence, R. I.

Public relations: Claude C. Morgan, Los Angeles, Calif.

Mr. Elmo W. Keel is national commander of the American Veterans of World War II; was

a master sergeant in the Air Corps on duty in the Burma-China area; was wounded and evacuated to the United States and received a medical discharge; is attending George Washington University, majoring in engineering. Mr. Keel is 30 years of age and prior to his entry into the armed service was employed as an industrial engineer. His home State is Virginia.

PROGRAM

Though present officers and members of the AMVETS consider themselves the trustees for members in the armed forces still in the service of their country, these men feel that there is an immediate need for a new veterans' organization which can best express the aims and purposes of the veterans of this war, and can concentrate its efforts on carrying such a program to completion. The present organization is so constituted that it may be revised before or after considerable demobilization, as necessity requires. National officers will be elected each year at the national convention, and at that time major policies will be discussed pending the convening of the first convention.

We want it understood that the AMVETS will take a definite stand on well considered and worthy propositions that has for its purpose the furtherance and protection of the veterans' interest.

We, of course, do not know all the answers as yet, and it follows that as a young and growing organization we have not had the opinions of a sufficiently large group of men to form a consensus of opinion on all the momentous problems with which we are faced.

We are seeking the cooperation of employers in exercising the utmost tolerance and understanding when they are faced with the problem of employing returning veterans.

It should be the desire of every returning veteran when he takes his place in civil life to affiliate himself with every worth while endeavor that has for its purpose the good of the entire community, and by so doing the veterans of World War II will demonstrate to the community that the things for which they fought shall receive their attention, interest, and cooperation.

The national headquarters contemplate a monthly publication which will bring to you and all veterans the progress of your organization and the activities of the State and local groups. We, therefore, shall appreciate your cooperation in making this publication a newsy and living chronicle of events transpiring in your locality.

Veterans, let's all stand and work together so that in the end we may all take some satisfaction in the fact that we made some contribution to a better Americanism.

ELIGIBILITY FOR MEMBERSHIP

Any American citizen shall be eligible for membership in the American Veterans of World War II who was regularly enlisted, inducted, or commissioned, and who was accepted for active duty in the Army, Navy, Marine Corps, or Coast Guard, the Women's Army Corps, WAVES, SPARS, Army Nurse Corps, the Coast Guard Temporary Reserve of the Armed Forces of the United States, or our allies, on or after September 16, 1940, and who served during some period between this date and the date of cessation of hostilities. Those who are qualified for membership by date of service under limitations indicated above, who have been separated from active service, must have been honorably discharged or must have been separated from active service under honorable conditions, in order to be eligible for membership.

Those members who have not been discharged shall be known as members at large.

DUES

Annual dues are set for $4 per year. Members of the armed forces are members at large. Their annual dues are $1.

CONSTITUTION OF THE AMERICAN VETERANS OF WORLD WAR II

Preamble

We, the American Veterans of World War II, fully realizing our responsibility to our country, State, and Nation—associate ourselves for the following purposes: To uphold and defend the Constitution of the United States of America; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of eternal peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy and Americanism; to perpetuate the friendships and associations of the great war of liberation, and to dedicate ourselves to the cause of mutual assistance.

Article I

The name of this organization shall be "American Veterans of World War II."

Article II

The aims and purposes of this organization are as follows:

1. To build and maintain the welfare of the United States of America toward lasting prosperity and peace for all of its inhabitants.

2. To encourage, in keeping with the policies of our Government, the establishment of a concrete plan to secure permanent international peace.

3. To inspire in our membership a sense of responsibility, and to develop leadership, for the preservation of our American democratic way of life.

4. To aid in promoting a lasting peace among nations predicated upon honesty, justice, and understanding of mutual rights, duties, and problems.

5. To help unify divergent groups in the overall interest of American democracy.

6. To train our youth to become purposeful citizens in a democracy with full knowledge of the responsibilities as well as the privileges of citizenship.

7. To cooperate with all duly recognized existing veteran organizations in the furtherance of the aims of World War II veterans. We feel strong bonds of friendship for the men of our country who fought in the First World War and the previous wars of our history. We recognize and appreciate the unity, interest, and strength they lend to all movements for veteran welfare. In our common efforts to achieve benefits for veterans and to protect the rights of our comrades still under arms, we are eager to cooperate.

8. To insure the orderly return of the veteran to civilian life by protecting his rights as an individual while he is still in uniform.

9. To expedite and assist in the rehabilitation of the veteran by maintenance of employment services, sponsoring educational opportunities, and providing counsel, for insurance, housing, recreation, and personal problems.

10. To act as a liaison agent between the veteran and the Government.

11. To seek community planning for the adequate care of all disabled veterans and the general welfare and rehabilitation of all veterans.

12. To provide an organization to encourage fellowship among all veterans of World War II.

13. To keep the public forever reminded that the veterans of World War II fought or served to preserve peace, liberty, and democracy for their Nation.

Article III. Organization

SECTION 1. The American Veterans of World War II shall be organized with a national headquarters, State and Territorial departments, and under these departments, local posts. Intermediate administrative groups may be created by the national executive committee where such action is deemed advisable.

SEC. 2. The national headquarters shall be composed of officers hereinafter described; one department representative from each department, and such other members who by the nature of their work are serving the national group. It shall be the duty of the national headquarters to advance the cause of the American Veterans of World War II, carry out their aims and purposes, provide the machinery of organization, represent its members in national affairs, and specify the national policies and plans of the entire organization.

SEC. 3. The States and departments shall be set up in a manner similar to the national group and shall be composed of officers and representatives chosen by post delegates to a department convention. It shall be the duty of the department to aid in organization and maintenance of local posts and to carry out the policies and plans delegated to it by the national headquarters, and to adhere to the provisions of this constitution.

SEC. 4. Local posts shall be chartered by the national headquarters and administered by the department headquarters, but shall be governed locally by their own officers chosen according to its constitution and by-laws. The policies, activities, and actions of the local posts must never be at variance with those prescribed by the national constitution.

Article IV. Membership

Any American citizen shall be eligible for membership in the American Veterans of World War II who was regularly enlisted, inducted, or commissioned, and who was accepted for active duty in the Army, Navy, Marine Corps or Coast Guard, the Women's Army Corps, WAVES, SPARS, Army Nurse Corps, the Coast Guard Temporary Reserve of the armed forces of the United States; or of our allies; on or after September 16, 1940, and who served during some period between this date and the date of cessation of hostilities. Those who are qualified for membership by date of service under limitations indicated above, who have been separated from active service, must have been honorably discharged or must have been separated from active service under honorable conditions, in order to be eligible for membership.

Those members who have not been discharged shall be known as members at large.

Article V. National Convention

SECTION 1. A national convention shall be held annually at a time and place fixed by the previous convention for the purpose of choosing a commander; first, second, and third vice commanders; finance officer; judge advocate; chaplain; and adjutant. It will have the further purpose of deliberating upon legislative matters and matters of policy, including any changes to this constitution or the national bylaws.

SEC. 2. The members of the convention shall be made up of department delegates. Each department shall be entitled to five delegates. For the first convention under this constitution, each post shall be entitled to one delegate. The same number of alternates may be chosen. The departments shall choose delegates at a convention at least 2 weeks prior to the national convention.

SEC. 3. Each delegate shall be entitled to one vote. The vote of an absent delegate may be cast by the alternate chosen by the delegates of that department. Alternates shall have all the rights and privileges of the delegates, except the vote.

SEC. 4. The department representative to the executive committee shall be chosen at the department convention and by such election shall become one of the delegates to the national convention for that department, and shall head its list of delegates.

SEC. 5. Sixty percent of the voting delegates shall constitute a quorum.

Article VI. Officers

SECTION 1. In addition to the officers elected by the national convention, there shall be

appointed by the commander, with the approval of the executive committee, an historian, service officer, chaplain, surgeon general, public relations officer, and national executive secretary.

SEC. 2. All the elective officers shall be members of the executive committee, but the commander will vote only in the event of a tie.

SEC. 3. Elective officers and the departmental representatives of the executive committee will convene immediately following the close of the national convention at which time the old officers will retire, and the appointment and approval of the officers to be appointed will take place. Commanders and vice-commanders shall not succeed themselves in office.

Article VII. National Executive Committee

SECTION 1. Between national conventions, the administrative power shall be vested in the national executive committee, which shall be composed of the national commander, vice-commanders and other elective officers, and one national executive committeeman and one alternate from each department, to be elected as such department shall determine; the alternate to act only in the absence of the committeeman.

SEC. 2. The term of such national executive committeemen and alternates shall be three (3) years. The term of office of each national executive committeeman and alternate shall commence immediately upon the adjournment of the national convention next ensuing after their election and shall end at the adjournment of the third next succeeding annual convention. At the first national convention only, the sixteen (16) departments with largest membership shall introduce their national executive committeemen for a three (3) year period; the sixteen next largest departments shall introduce their national executive committeemen for two (2) years of service; and the remaining national executive committeemen will be introduced to serve for a one (1) year period only.

Article VIII. Department Organization

SECTION 1. Each State or Territorial area of the United States shall constitute a department, which shall be patterned along the lines of the national headquarters. The department will have its own executive committee and will maintain its own convention, to be held not less than 2 weeks before the annual national convention at which time it will choose delegates to the national executive committee.

SEC. 2. The departments shall be chartered when application has been made to the national headquarters and approved by a vote of two-thirds of the executive committee.

SEC. 3. The departments shall have the authority to create intermediate administrative groups for the handling of the local posts should they deem such action advisable.

Article IX. Local Posts

SECTION 1. Local posts may be formed by any ten (10) eligible individuals by making application to its local department, and if there be no department, directly to the national headquarters. If the department approves, it shall be forwarded to the national headquarters and a charter may be issued upon the approval of the executive committee and signed by the national commander and national adjutant.

SEC. 2. Local posts are subject to the jurisdiction of the national headquarters and the department headquarters, but shall be allowed to use their own initiative except where their actions conflict with the principles and practices of the organization. They shall be named for gecgraphical locations or for a veteran killed in World War II, and if there is more than one in that district, then they shall be numbered.

Article X. Finances

SECTION 1. All finances of the American Veterans of World War II shall be under the control of the finance officer, who shall make an annual report at the national convention. Revenue may be derived from annual dues and other sources approved by the executive committee. Regulations of annual dues shall be by a majority vote of the delegates in annual convention.

SEC. 2. An annual budget shall be submitted for approval at the first annual meeting of the executive committee. It shall be prepared by the retiring finance officer, who shall have received departmental budgets from the other retiring officers and shall have consolidated the same. In the event that the budget is not approved a finance committee consisting of five retiring members of the executive committee shall be appointed by the new national commander.

SEC. 3. Each local post shall remit annually to the national headquarters the sum of $2 for each member of the post, and remit annually to the department headquarters the sum of $1 for each member of the post. The post shall retain the balance of the annual membership fee. The annual membership fee for each member shall not be less than the sum of $4.

Article XI. Discipline

SECTION 1. Disciplinary rules relating to the post will be prescribed by the departments.

SEC. 2. The national executive committee after notice and hearing before a subcommittee, may cancel, suspend, or revoke the charter of any department for any good and sufficient cause to it appearing. Procedure for such action will be prescribed by the judge advocate.

SEC. 3. In the event of such action the national executive committee is empowered to take over the operation of the department, but is bound by the constitution and bylaws thereof. At the next department convention a new department must be selected to carry on the work of the department.

Article XII

Any member in good standing may change his post or department, and may join a new post without paying annual dues, upon proof of his previous good standing.

Post-VE-Day Lend-Lease

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 31, 1945.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The undersigned are anxious to know the policy you intend to follow after VE-day in carrying out the powers given to you under the lend-lease law.

When lend-lease extension was before the House Foreign Affairs Committee, we proposed amendments which would have limited the postwar use of lend-lease. When these were defeated we refused to vote for the extension of lend-lease, and on March 8 filed a minority report urging that Congress should not "extend the lend-lease power, administration, and practices into the postwar period." In this report we quoted President Roosevelt, who said "lend-lease and reverse lend-lease are a system of combined war supply. It should end with the war," and testimony, before our committee, of Lend-Lease Administrator Crowley and Secretary of War Stimson to the same effect.

A few days after this report, we five agreed with lend-lease officials upon the wording of an amendment which we were assured would effectively prohibit the use of lend-lease as a postwar measure, but permit the orderly and efficient liquidation of war supply contracts already made with foreign governments. This amendment was then unanimously approved by our committee and overwhelmingly adopted in the House.

The exception, in the postwar prohibition, permitting sale of war supplies no longer necessary for our defense, was attacked in the Senate as permitting a loophole for the postwar use of lend-lease. An amendment attempting to strike out this exception was defeated by a vote of 39–39. You cast your vote as Vice President against this amendment, and signed as both Vice President and President the lend-lease extension bill. Because of this historic series of events you have a peculiarly intimate knowledge of the legislative intent involved in the statutory limitations on postwar lend-lease. The undersigned, having first approved and supported the precise language of this limitation, feel an especial interest in its administration.

The amendment adopted permits only agreements for the furnishing of defense articles, etc., "for use in the prosecution of the present war." Since May 8 the only present war is with Japan. We, therefore, believe that since your announcement of May 8 no new agreements can be made except with countries at war with Japan. The French, Belgian, and Dutch agreements provide for payment in dollars for any war supplies already contracted for that "are no longer necessary for the prosecution of the war." (See art. III.) The only war now being prosecuted is against Japan and therefore except for articles which are necessary for the prosecution of the Japanese war, the three governments should begin to pay in dollars for articles and services received after May 8. Even though some of this may be convenient or helpful for the Japanese war, it sohuld not be furnished under the lend-lease no-pay pattern, unless it is absolutely necessary for fighting the Japanese.

We believe the same principle should be applied to all lend-lease.

It was clearly the intention of Congress to legislate the interpretation we have stated. We realize the great postwar needs of many of our allies and believe that we should make mutually beneficial agreements to help meet these needs, but not under lend-lease. We appreciate that the policing of Germany is an aftermath of this war which is in part our obligation, but lend-lease should not be used for this purpose.

Holding these views as Congressmen, we are anxious to know your views as Chief Executive. While we know that you are limited to the powers given you by law, we also know that it is not necessary that you exercise every conceivable bit of power conveyed by law to "lease, lend, or otherwise dispose of" the property of the people of the United States.

We feel confident that you will follow the wisest policy for which you have clear authority in law. Your policy on post-VE-day lend-lease has been obscured, rather than explained, by the combined effect of your own statements, those of Under Secretary of State Grew, and Lend-Lease Administrator Crowley. There may have been sound political and diplomatic reasons for this confusion during the past few weeks. We know that this is a difficult problem, involved with many other problems. The time has come, however, when decisions must be made. In the field of foreign affairs we do not wish to intervene in matters that are your responsibility under the Constitution. In the

field of congressional relations, we feel justified in offering our views. If you seek loopholes in the lend-lease law to extend your power to act without consulting Congress, we feel this would be disastrous. If, under the guise of aid for the Japanese war, you furnish postwar help to France, Britain, and Russia, we five, and many Members of Congress, will feel we have been fooled. If, on the other hand, you limit lend-lease to the present war and come to Congress with the vast and complicated problems we still face, aside from the Japanese war, after VE-day, we pledge you our loyal support.

Will you let us have a statement of the policy you intend to apply as to lend-lease after May 8?

Respectfully yours,

ROBERT B. CHIPERFIELD.
JOHN M. VORYS.
KARL E. MUNDT.
BARTEL J. JONKMAN.
LAWRENCE H. SMITH.

Another Example of Maladministration in the War Dairy Food Program

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, I received the following letter from the War Food Administration in regard to the allocation of tin plate for filled milk:

WAR FOOD ADMINISTRATION,
Washington, April 27, 1945.

Hon. REID F. MURRAY,
House of Representatives.

DEAR REID: This is in reply to your letter of April 16. We have been unable to locate the letter which the War Production Board reported was forwarded to us. We are sorry if the delay has inconvenienced you.

Since 1942 the allocations of steel to the filled-milk industry have been established on the basis of the 1942 pack except for the current year the restriction on the use of steel has been lifted as was the case with condensed and evaporated milk.

Following are our estimates of the consumption of tin plate for filled milk:

Year:	*Short tons*
1940	5,519
1941	5,510
1942	3,870
1943	3,483
1944	3,676
1945	4,044

We estimate evaporated milk production in 1945 to be 110 percent of 1944 and have applied this same increase in this instance.

Sincerely yours,

MARVIN JONES,
Administrator.

Let us analyze this situation as far as skim milk is concerned in the United States in general, and in Wisconsin in particular. The OPA sued the powdered skim-milk producers of Wisconsin for an alleged overceiling charge on powdered skim when the product had not had a dollars-and-cents ceiling price put on it. They not only harassed, persecuted, prosecuted, and sued these Wisconsin co-ops but they also collected from them as well.

There is at the present time a suit pending wherein the OPA has sued one co-op, and it is to apply later to the other co-ops, for an overcharge on condensed skim reputed to be twenty-three one-hundredths of a cent per pound. This is really a small part of a cent per quart overcharge for the skim milk per quart.

While all these ridiculous performances have been going on that have been harmful to the war dairy food program, the same War Food Administration has been allocating over 52,000,000 pounds of strategic material to can skim milk. Evidently when a little cottonseed oil is injected into the can and added to the skim milk, the skim milk then has a more favorable position. The product after it is manufactured cannot be legally shipped interstate. The Supreme Court upheld this law again in October 1944.

In the Agricultural appropriation bill for next year $1,300,000 was added to the bill to hire another $1,300,000 worth of bureaucrats to ration cream and milk under Order No. 97.

The WFA has enough men on the pay roll now working on other orders that could be transferred and still be beneficial to the war dairy food program.

While the OPA persecutes the producers of skim-milk products, the WFA takes over the cream and fluid-milk groups, and allocates greater and greater amounts of tin plate to make more of the concotion known as filled milk.

A ceiling is put on the production of foreign-type cheeses. Golf balls are evidently more important than food products under the present set-up.

One had to get down on bended knee to get enough tin plate to repair a corner cheese factory, while the filled-milk people were getting thousands of tons of tin plate to can a product with a couple of cents worth of skim milk in it.

If one agency is to handle these food problems it is hoped that the agency selected will use more judgment and fairness in handling the dairy food program, than has been exhibited by the OPA or the WFA.

Iwo Jima

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Louanne Wilder:

IWO JIMA

A little speck in God's great ocean
And yet it causes great emotion
When we think of our marines
Fighting on those far-off scenes;
We owe them all our deep devotion.

We think of how "we knew them when"
The fighting urge was just a yen;
When they were spending time in training,
Lots of laughs and more complaining!
I wish they all might laugh again!

They joined the corps with so much pride;
Then came the months at oceanside;
That's not the place for making hay!
So they headed for old L. A.
Trying their best to get a ride.

It took some time to get acquainted,
But when they did the town was painted!
You always knew when they would land,
The "situation was well in hand";
The IV–F's swooned and the women fainted.
The USO's took on a gleam
Whenever they'd walk upon the scene;
And everywhere you looked you'd see,
That famous "spearhead with the V"
On many a sleeve of forest green.

Then the orders—and, as I remember,
It was in the beginning of September;
They bade farewell to us at home,
And started out, the seas to roam,
To kindle the fire that was still an ember.

That fire soon raged against the Japs
From little-known places on world-wide maps.
They lingered a while in old Hawaii,
Some at Oahu, some at Maui;
Counting the time 'til they'd spring their traps.

Then suddenly there came to view,
News of a place we little knew;
The blazing headlines told the story
Of how our friends were making glory.
Soon they'd be raising the Red, White, and Blue.

The 19th of February in '45;
Our memory will keep that date alive,
For on that date we first discovered,
That the trap had been uncovered;
They were out for Japs, Division Five.

With eager eyes we scanned the news;
Of course, we knew the Japs would lose;
But nevertheless, we watched and waited
With eager hearts and breath abated;
Wondering how many friends we'd lose.

With unleashed fury they plunged the knife,
Sharpened by vengeance, despair, and strife;
There ensued our history's fiercest battle;
That resembled a sea of slaughtered cattle;
But they shortened immeasurably Tokyo's life.

"In Flanders Field, the popies grow,"
But what is there on the shores of Iwo?
No brilliant blossoms to scent the air,
And yet we know that God looks there
On cold, white crosses, row on row.

We'll never know the names of some,
And so throughout the years to come
They'll ever lie in peaceful slumber,
Marked not by name, but just a number;
Yet living in the hearts at home.

—*Louanne Wilder.*

Bretton Woods Bank and Fund

EXTENSION OF REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Hon. Charles S. Dewey, former Member of Congress from Illinois:

WASHINGTON, D. C., *June 1, 1945.*

Hon. JESSE WOLCOTT,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: It is with pleasure I respond to your inquiry as to my present

attitude regarding the so-called Bretton Woods bank and fund as proposed in a bill containing sundry amendments agreed to by the Treasury and all but three members of the Banking and Currency Committee and recently reported by that committee to the House of Representatives.

As you are aware, I took a most active interest while a Member of Congress in the matter of postwar international economic and financial collaboration. At the time the plan for an International Clearing Union with its novel feature of a new international currency called the Bancor was introduced by Lord Keynes of England and a counter-proposal known as the International Stabilization Fund was offered by our own Treasury Department, I, too, offered a plan for a financial institution. That institution contained many of the featurees existing in your committee's bill as amended for the creation of the International Bank for Reconstruction and Development. These features were supplemented by the powers for short and intermediate term financing of foreign credits provided by the Export-Import Bank of Washington.

My interest in foreign trade, which is aided when world currencies are fairly stable, goes back some 20 years. It should be remembered that World War I left in its wake the same type of demands of rehabilitation and currency stabilization that face the world today. I recall vividly, and as an agent in putting into effect the Stabilization Plan for the Government of Poland, the work and deep study of such experienced individuals as Gov. Benjamin Strong, of the Federal Reserve Bank of New York, Montague Norman, Governor of the Bank of England, and Governor Moreau, of the Bank of France. With them were engaged the heads of 11 other central banks of issue. Their work and the practical knowledge gained should be given careful consideration.

In facing current problems of currency stabilization, let it be remembered that experience teaches that the providing of easy loans or the making available of dollars to foreign countries will not in themselves stabilize their currencies or domestic economies. This method was tried in 1919 when the firm of J. P. Morgan & Co., as agent for the British Government, used dollars provided by the United States Treasury in an attempt to hold sterling exchange at a fixed rate with the dollar. Nearly three billion of Government funds were employed in this manner together with an additional sum of another $3,000,000,000 of private credits for stabilization and related purposes of the British and other European allies. The result was that exchange rates for nearly all European currencies were held far higher in their relation to the dollar than was justified by the economic conditions of respective countries, and these countries made many purchases they could not really afford.

The whole situation culminated in 1920. As a result of our loans and credits our exports increased to an all-time high putting such a demand upon our reduced supplies that prices soared. Then the credits became exhausted, no more loans were forthcoming. The pegs were pulled. Prices collapsed here and the artificially maintained values of foreign currencies collapsed abroad. Our money was lost and the whole job had to be recommenced. The history of the twenties was a struggle back to sound economies and stable currency. In this later period also we made the mistake of lending our dollars too freely and with too little care.

When the Bretton Woods plan was presented, I was opposed to the so-called stabilization fund for the reason I feared the dollars contained therein were not properly safeguarded and could be too easily withdrawn with the same unfortunate results that followed our efforts at stabilization in 1919 and again in the late twenties. In principle I approved of the International Bank for Reconstruction and Development because I thought, with good management, it could be made a sound and useful mechanism for foreign loans.

The amendments which the Banking and Currency Committee in cooperation with the Treasury have approved give notice to one and all as to how and for what purpose dollars in the fund are to be used. There may be occasions when this red light will not be observed but if these occasions occur too frequently I presume that the Congress might deem it advisable to close this thoroughfare entirely. This right is reserved under the terms of the agreements and one of the new amendments provides a full review of the question every 2 years.

The new section in the act, permitting the International Bank for Reconstruction and Development to make long term stabilization loans is all to the good. This permits governments to develop plans, and obtain long term loans to put them into effect, under which their national economy can be developed upon a sound basis. The temptation to run to the "fund" to obtain dollars for any purpose, while the "obtaining is good" will thereby be easier to control if the management is competent and courageous.

There has been considerable discussion as to the advisability of having a single board of directors direct the policies of both the fund and the bank instead of having two separate boards as originally provided. One of the amendments goes part of the way toward a merger by providing a single United States governor for both institutions. Proponents of two boards take the grounds that short and long term credits are of an entirely different nature and should be dealt with separately. On the other hand in so complicated a question as currency stabilization many short term factors are governed by long term policies, and in setting up comprehensive stabilization plans for any country better results might be obtained, if one group had the over-all picture rather than having the problem divided into two parts, each being dealt with separately. There will be many border-line cases. This is one of the questions the Senate Committee may wish to consider further. It is not the sort to debate on the floor of the House.

Of course nothing in this life is perfect, but it is my belief that the long and careful consideration of the fund and bank by the Banking and Currency Committee has produced good results. Further consideration in the Senate may bring out points that the Conference will wish to adopt. However, as it has now been amended and reported to the House, if I was still a Member of the Congress, I would vote in favor of H. R. 3314.

Very truly yours,

CHARLES S. DEWEY.

Presbyterians Oppose Peace of Vengeance

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of May 31, 1945:

PRESBYTERIANS OPPOSE PEACE OF VENGEANCE

MINNEAPOLIS, May 30.—The One Hundred and Fifty-seventh General Assembly of the Presbyterian Church in the United States today opposed isolationism, vengeance in peace settlements, and peacetime military conscription.

The assembly adopted the comprehensive report covering both international relations and domestic problems prepared by the standing committee on social education and action.

The report warned against imperialism under the guise of self-defense and recommended justice free from vengeance and vindictiveness in the United States' treatment of Japan and Germany. The report also recommended treatment of the defeated enemy should include these elements:

"Essentials of economic wellbeing, territorial integrity, and political stability for both these nations.

"Encouragement of reeducation of the German and Japanese people through strengthening the constructive forces within them."

The assembly reaffirmed its conviction that "action upon a postwar policy of peacetime military conscription should be deferred until after the war" and expressed hope this country would "use its good offices for international agreement on elimination of national peacetime military conscription."

Voluntary Recruitment of Army and Navy Nurses

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. JUDD. Mr. Speaker, it is good news that the War Department has withdrawn its request for legislation to draft nurses, and admits it is getting good results from the voluntary recruitment campaign. Under leave to extend my remarks, I include an editorial from the Saturday Evening Post of April 28, 1945. It is gratifying to have the position presented therein vindicated:

THE NURSES HAVE NOT LAGGED BEHIND

President Roosevelt's request to Congress to draft nurses for military service and the subsequent misunderstanding and misinformation have created the impression that nurses have failed to volunteer for war service.

Actually, the record of Army and Navy nurses for voluntary enlistment is extraordinary. The record for the Army Nurse Corps shows that there were 955 members in 1940. As of today, it has been expanded to more than 46,000 members. These are all volunteers. The Navy Nurse Corps is close to filling its quota of 11,500 members. These, too, are volunteers. Representative FRANCES P. BOLTON, of Ohio, author of the Bolton bill creating the United States Cadet Nurse Corps, has pointed out that "a higher percentage of nurses has volunteered for military service than any other skilled or professional group, with the possible exception of doctors. Seventy-five thousand of our 274,405 active graduate, registered nurses have applied for service. Fifty-seven thousand of these are or have been serving in the Army or Navy. This glorious record of voluntary service should be recognized by the War Department and the American public."

The War Department, which insisted upon the draft, delayed too long to authorize its Medical Department to assign a bare mini-

mum of personnel to the recruiting drive. Volunteers of the American Red Cross are relied on for recruiting and processing. Representative WALTER H. JUDD, of Minnesota, a physician who has a vast experience with Chinese troops, asks, "How do we know the voluntary system has failed, since it hasn't had a chance to work? The War Department has reason to explain why it has given little support and no appropriation to the nurse-recruitment drive while implying through its demand for a draft that the voluntary method has failed. On the other hand, to secure less than 100,000 Wacs, the Army has spent more than $3,000,000 of Government funds for publicity and advertising; more than $10,000,000 have been contributed by generous advertisers throughout the Nation for the same purposes; and some 3,800 personnel are assigned to recruiting duty."

Certainly no one has a right to conclude from recent discussion of the draft that nurses are laggards. Advocates of the draft of nurses made no such unjust charge, but have been led to believe that voluntary enlistment, splendid as it has been, would not produce the nurses needed by the Army and Navy. Perhaps it wouldn't, but the record of nurses at Anzio, Corregidor, in France, Germany, India, China—wherever our troops are—is a record of daily heroism by nurses who chose to be where they are. No law compelled them.

The to-do over the nurse draft has taken attention from many things which civilians can do to make it easier for nurses to enter Army or Navy service. For one thing, civilians can relieve some of the home-front pressure on nurses by relaxing demands for private special nursing and by organizing such plans as that adopted in Hartford, Conn., where every application for a "special" must be reviewed by a committee of doctors. Hospital authorities can help by insisting that special nurses be available for ward duty whenever the care of their patients boils down to arranging flowers, reading aloud, or playing cribbage. Thoughtful community planning for the dwindling resources of medical care will be necessary anyway.

Obviously, the first consideration is to get nurses to our sick and wounded men. If the draft is needed to accomplish that, particularly when mounting Pacific casualties strain our resources to the limit, we must accept that fact. Nevertheless, the public is entitled to ask why nurses, who have volunteered, in proportion to their numbers, far beyond the record of any other group, were prematurely singled out for conscription, unless that policy was to be part of a draft for al women war workers, Wacs, Waves, Spars, and all the rest. Unless that is the intention, our heroic nurses have good reason to feel that American officialdom, at any rate, has not understood one of the outstanding voluntary achievements of this war.

Also included is an interesting letter a friend has received from one of our Minnesota nurses now in Europe. It reveals in vigorous terms why the Army had a nurse shortage—faulty distribution and inefficient use of the nurses it had:

A GENERAL HOSPITAL IN EUROPE,
May 6, 1945.

MY DEAR ———: * * *

At last it seems the end of war in Europe is here—and it's a blessing it is. I believe none of the stories are exaggerated that you're reading now. We have seen some of the returned P. W.'s, and they are truly pitiful. Even Allied soldiers fared poorly. We've had some patients who were captured as late as the 23d or 25th of March in that air-borne deal, and they look terrible. However, with the millions of slave laborers to feed, political prisoners and Allied soldiers also to provide for, it's no wonder they starved when you hear how our air force ruined their transportation. Thank God for our Air Force.

We have no idea about our return home. Don't know the policy of the War Department, but we certainly should have a high priority as far as medical units go for a return trip to the States. Just think—it will soon be 3 years. Little did we think we would be gone this long time. Three bronze stars.

There was a fine article on drafting the nurses in Time not long ago. It certainly hit the pertinent issues—such as treating us like a boarding school, etc. I think the whole thing is faulty distribution. There are 300 nurses sitting in one spot right now who have never worked on the continent. Some of them have been there for 3 months. And on the other hand—girls up in the front in evacuation hospitals some days work 14 hours. It doesn't make sense, and then they wonder why we discourage girls from joining the Army.

At one of the busiest hospitals in Paris they have a nurse on nights all the time on duty in the quarters for the sole purpose of checking the nurses in at night. I believe I would take a court martial before I would do that job. These are just a few facts—and don't hesitate to tell them.

Kaye tells me they are unionizing the nurses in Los Angeles. I'll bet that will soon be a mess.

Went to the opera in Antwerp—heard Madame Butterfly. She was lovely but had poor support.

The next letter will be from a peaceful Europe, I'm sure.

Love,

Jo.

Not New But Somewhat Startling

REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. HOFFMAN. Mr. Speaker, the apparent greed of those who, especially in wartime, should set us an example of unselfish devotion and whole-hearted service in the interests of our country, again crops up in the administration's official family.

The people have become accustomed to the money-making proclivities of Henry Wallace and Harry Hopkins, who have long profited through the publication of articles and books containing information which in part came to them only because of their official positions. Few of us, however, ever thought that E. R. Stettinius, Jr., reputedly wealthy, the head of the conservative State Department, would follow in their footsteps.

We have been told that in the 4 years which ended on March 31 last, lend-lease cost the United States $38,097,797,000, but the people generally have never been advised as to how that money had been spent; as to the articles which were purchased; nor as to who received them, nor when. It would seem that as long as the people furnished the money for lend-lease, paid the expenses and the compensation not only of Mr. Stettinius, the Secretary of State, but of a multitude of employees in that Department, that if there was information worthwhile which the people should have, that the Department, under his direction, should have made it available to the public without charge and as an official publication. But such seems not to have been the policy of Mr. Stettinius, for this morning to the desk of Congressmen comes the announcement of the Macmillan Co., publishers, that Mr. Stettinius has written a book, and we are told that it is available to each of us who cares to send on the sum of $3.

The Macmillan Co. letter reads as follows:

OVER $200 PER PERSON SPENT ON LEND-LEASE IN UNITED STATES—ARE WE GETTING OUR MONEY'S WORTH?

You want the facts and figures on what your dollars have done in lend-lease and on what is coming to us in return.

Lend-lease, Weapon for Victory, gives you the facts on one of the most ambitious foreign policies ever undertaken by the United States. Edward Stettinius, Jr., shows you the over-all picture of the war of supply, of an organization which has encircled the globe—how it is set up and how it works, what happens to the goods that your dollars have bought, and how they influence military action on all fronts.

But this is more than a report on facts and figures. It tells the stories of individuals and dramas in this large-scale operation and cooperation of the British Commissioner in New York, who in the early hours of the day France fell, took over $500,000,000 worth of French contracts in the name of his government, on his own responsibility; of Wellington, New Zealand, where earthquake damage remained unrepaired in the summer of 1942 while supplies of cement, lumber, and civilian labor were reserved for reverse lend-lease projects for United States forces.

This is a book you won't want to miss, because your dollar is involved. We enclose a card for your convenience in ordering.

Very truly yours,

THE MACMILLAN CO.,
Mail Service Department.

Enclosed with the letter is an illustrated 12¼ by 13¼-inch, 2-page, 2-color circular, advertising the book which, it is said, contains 60 illustrations, giving a vivid, pictorial history of lend-lease. There are 7 graphic maps, 4 in full color; 13 graphic charts giving statistics in picture form; and 40 official photographs—note that word "official"—which include pictures of the men behind lend-lease operations and of lend-lease supplies in action on all fronts.

The worst thing about the New Deal and its official family is not the national bankruptcy—and I will say nothing about the war—but the moral bankruptcy which it has brought about. Under the New Deal not only have our people been told by word and by example that the Nation owes them a living; not only have racketeers and loafers been rewarded in return for their political support, but some of those at the head of that administration who should have given the people examples of integrity, of faithfulness to the public service, have set an example for the youth of the land which, whatever may have been its purpose, will tend to destroy thrift, the ambition to work, unselfishness, and single, wholehearted patriotic devotion on the

part of public servants to the interests of their country.

How low the official morale of the country's public servants has fallen is indicated by the fact that some in high positions use the facilities of their positions to further their own personal interests.

Many of us are relying upon President Truman to restore to the Nation that standard of integrity which existed before the coming of the New Deal.

Justice Versus Vengeance

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of June 1, 1945:

JUSTICE VERSUS VENGEANCE

Plans for trials of German and Italian war criminals have not yet jelled sufficiently to give anybody a clear preview of what the trials are going to be like.

It is known, however, that Supreme Court Associate Justice Robert H. Jackson is our representative in setting up the arrangements for the trials. It is evidently in the cards too, that whatever tribunals are created will be run by the Allied governments. Allied prosecutors, naturally, will press the cases against the German and Italian war criminals. Whether the defendants will be permitted counsel of their own choosing, or be given attorneys appointed by the war crimes court, we don't know.

While the plans go forward, a good deal of solemn talk comes from Allied sources to the effect that the war criminals are to be given "stern justice" only; that no vengeance or punishment for revenge's sake is sought.

The kind of trials described above may be the kind of trial these Germans and Italians, and later the Jap leaders, should get. We're not talking about the right or wrong of that just now. But trials of this kind will not produce what is generally understood as justice. They will produce vengeance for the Allies in each case where a defendant is convicted.

To afford what is commonly understood as justice, these trials would have to be held before neutral judges, with both the Allies and the Axis defendants introducing all the evidence they wished, and with the judges solely concerned with deciding the cases impartially.

That is to say that the main war-crimes court would have to be made up of the Lord Chief Justice, or whatever his title is, of—some people are not going to like this—Eire (southern Ireland), plus the Chief Justices of Sweden, Switzerland, Spain, and Portugal. All these countries were neutral throughout the German war. The court would have to sit, too, in some neutral country.

Justice Jackson would then function as chief prosecuting attorney for the United States, along with prosecuting attorneys from Britain, Russia, France, and any other countries wanting to press charges against any Germans or Italians for what they did during the war. The Axis defendants, of course, would have their own attorneys.

Such trials would conform to the general conception of the meaning of the word "justice." The trials now being planned will produce vengeance or punishment, not justice.

That may be entirely O. K. But let's call these things by their right names. Let's not dress them up in words designed to paint them as something they aren't.

It may be that these trials, in which the Allies will be both judges and prosecutors, will eventually bring into existence a new rule of war—namely, that to lose a war is a crime in itself, and that the leaders of any nation which loses a war are automatically to be "tried" by the winners, solemnly found guilty of having been war criminals, and executed or given long prison terms at hard labor.

NEW CONCEPTION OF WAR CRIMES

That will be something new in war customs—or something as old as the pre-Christian habit of parading conquered chiefs before the people and then executing them—but it may be all to the good.

It won't be "justice" as most people understand the word. But it may have the effect of discouraging pugnacious national leaders here and there from hauling their countries into wars. If some future Hitler, Mussolini or Tojo knew that the inevitable penalty for losing a war would be the loss of his personal life, he might be deterred from starting some war he had in mind. That would be quite a blessing for the young men of his nation who would have had to do the fighting and dying for him if he had started the war.

If it becomes established as a crime to be the leader of a nation which loses a war, then we should abide by this new rule of war like any other nation.

Suppose some day we have a President who keelhauls us into a war, and that then we proceed to lose that war. Let us then reconcile ourselves to seeing him solemnly "tried" by a court and prosecutors controlled by the victorious enemy, found guilty, and executed as a war criminal. From our point of view, a war criminal is exactly what he will be.

Compulsory Military Training

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. ARENDS. Mr. Speaker, on Monday, June 4, the Special Committee on Postwar Military Policy will begin hearings on compulsory military training. It is expected the hearings will last for a period of 2 or 3 weeks. Both proponents and opponents will have the opportunity to appear before this committee and express their views.

The question of whether the United States will adopt a policy of 1 year's compulsory military training remains to be seen. This is an important question and argument can be made both for and against a proposition of this character. We find many sincere people advocating the passage by Congress of such a measure, while other equally sincere people violently oppose it. I am glad that hearings are to be held in order that both sides of the question will be clearly presented to the committee, Congress, and the whole country.

Recently, the largest newspaper in my district, the Daily Pantagraph of Bloomington, Ill., sponsored a letter contest on the proposal of compulsory military training. There were many splendid letters written on both sides of the question. War bonds were issued as prizes to the winners. The sponsoring of such a contest I feel was a splendid idea, in that it created discussion and thought amongst many good citizens who reside in my district.

On Wednesday, May 30, the Daily Pantagraph carried a splendid editorial on the subject Will Peacetime Draft Give United States Best Security? Under unanimous consent, I include this editorial as a part of my remarks in order that interested Members of the House may read it:

WILL PEACETIME DRAFT GIVE UNITED STATES BEST SECURITY?

On this Memorial Day we could say a few sentimental things about the men who gave their lives for this great Nation—and stop there. This time we are not going to do that. We are going to express firm opposition to a proposal that apparently has the support of a considerable number of the people of the United States. We are opposed to compulsory peacetime conscription. We oppose it because we feel that this free democracy for which these honored men died can best be developed if it stays forever divorced from even the potential dominance of a military clique.

We are opposed to peacetime military conscription because history does not record a time when it prevented wars. There is plenty of room for debate as to whether it ever won a war. Certainly it is not winning World War II and it did not win World War I.

A number of red herrings are drawn across the path of the real issue. We are told that compulsory peacetime military training will build up the health of the Nation, that it will offer much-needed vocational educational training, that it will give our young men disciplinary training in which they are lacking, and that it will help solve the unemployment problem.

ELIMINATE STRAW MEN

Morrs Fuller, of Bloomington, who has presented the most logical and convincing argument for this program we have heard to date, frankly eliminates all such claims. He says that anyone who expects his boy to come out of a year of military training a better boy than he went in just doesn't know the tenor of the military services. He says military training is training in mass killing. We are willing to take his word for that.

Let it not be assumed, however, that we are advocating the junking of our air force and our navy and our standing army. We have unshaken faith that this world will some day advance to a point where wars will be considered as the idiotic devices of madmen, and we will have nothing to do with them. When that time comes in perhaps 200 or 2,000 years, there will be no need for armed forces. But we live today. Man has not advanced yet to a point where he can think with his brains instead of his glands. He gets mad and fights. Individual man acts in that way. He fights over his religion, his boundary line, his public utilities, and the color of his skin. As long as individuals act that way, nations cannot be expected to do better.

A strong military force is expedient, therefore, if we are to live in today's world. We believe our navy should be kept intact and constantly improved. We think that it should be expanded if it is not large enough to give us adequate protection in both oceans. We believe our air force should be maintained at a high rate of efficiency and in sufficient force to give us protection. We believe that the Nation should have an adequate standing army, if we can determine

what that would be. All that, we believe, can be done in peacetime without conscription.

COMPLACENCY GREATEST FOE

It can be done by raising the standards of pay for military service. It can be done by increasing the enrollment and the number of war colleges. One such college for each area command could be considered. It can be done by stimulating scientific research.

Yet we do not look there for our greatest national protection and strength. We look to the average citizen. The largest military force can only reflect the state of mind of the citizenry. If we get complacent, if we forget the dangers of the past and the obligations of the future in a mad and shortsighted spree of self-interest, no military force can save us.

Let us never forget that our humiliating defeat at Pearl Harbor was not due to lack of military might on the scene. We had highly trained Army, Navy, and air personnel there December 7, 1941. We probably could have wiped out the entire Japanese attack force. We didn't, because we were too complacent. That is an example the proponents of compulsory peacetime military training should never forget.

Military forces in peacetime only shadow box. The officers are inclined to operate on a 24-hour, year-round, country-club basis. The whole military personnel become the most ardent devotees of the status quo. We do not wish to place the future of this country in peacetime in the hands of a collection of brass hats and drill sergeants.

Compulsory peacetime military training is a sedative. It follows the too familiar American pattern of trying to solve a problem by passing a law. If the law doesn't work, then the next thing to do is to make an appropriation.

COSTS MORE THAN ALL EDUCATION

Let us not overlook that second step—the appropriation. A committee of the United States Chamber of Commerce signed by such persons as Henry I. Harriman and Harper Sibley says: "It is probable that universal military training will ultimately add to the Budget of the United States not less than $3,000,000,000 and possibly $4,000,000,000 per year."

That is as much and possibly more than this country now spends for all elementary, secondary, and higher education both from public and private sources.

Shall we spend more on a copy of Prussian militarism we have sacrificed a million lives to stamp out than we now spend on all public and private education from crib through college? Is that the way to forge a stouter democracy? Is that the way to make our greatest contribution to the ideal of world peace? Is that the spirit of the United States? Is that the way to provide security for ourselves and our descendants? We think it is not.

We think that this Nation's greatest security is in an enlightened citizenship—a citizenship that recognizes and accepts its responsibility in the ward as well as the world, in the market place as well as in the chapel.

We Face a Famine of Scientists

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the current issue of the Saturday Evening Post:

WE FACE A FAMINE OF SCIENTISTS

Although the United Nations have forced Germany's capitulation and are making impressive gains against Japan, we shall never know how much more quickly our triumph would have come had we from the outset recognized the vital importance of technology in this war. We still draft young technological experts into the armed services, which do not need them, and thereby take them from war industry, which needs five times as many as are available. Perhaps this is not the sole reason why Germany came up with the first robot bombs and the first rockets, but that fact is something for the greatest industrial producer in the world to contemplate in humility when mapping out future policy.

As we face the enormous task of converting our war industries into peace industries—and into jobs for millions of people now employed in war plants—it may be a good idea to face some of the facts which we have shoved to one side during the war. First, it will be impossible to produce 60,000,000 jobs or anything like that figure either by pouring out the taxpayers' money or by telling business and industry to produce jobs or the Government will produce them. The only way to make jobs is to make available for peace needs the technical advances which have been made in the war. Development of transportation, from the horse and buggy to the airplane, with the collateral boom in petroleum, rubber, steel, electrical devices, and curb service, was not accomplished by speeches about guaranteeing jobs. It was accomplished by the hard work of thousands of technologists who were permitted to experiment and dabble and try out their hunches. As the result of our selective-service policy, we face a real shortage of technical men for a new technical era. We expect miracles to be performed by science, but forget that the job—which is no miracle—has to be done by scientists.

The fight to retain technologists in positions where their efforts would be useful has not been waged by the technologists themselves. The skilled men below 30—who virtually monopolize the new knowledge on which leadership in war depends—have been silent. They have had to be. The fight had to be led by older men who understood the importance of technology in war. As one of the leaders in the fight puts it, "If technologists were like some other groups, they would just keep quiet and let the supply of technologists run as low as possible. Then the law of supply and demand would boost their pay to the skies. A mere handful of technologists in about 10 years solved the problem of quick-freezing foods. Now the results are applied in hundreds of centers with less highly trained specialists or laymen to carry on. The man who did the most in this development is no longer in the field. He is seeking new problems to solve, not for the financial reward, but because technologists are made that way." Because the chemist is not much of a squawker in his own behalf, we have ignored his right to be heard.

Consequently, more than 15,000 chemists and chemical engineers are found in the armed services doing work having no relation to their training. At the same time we have dammed up the supply of new technicians who would normally be entering technical schools and colleges. A bill has been introduced in Congress making it possible to undo some of the damage by relieving a few of the chemists from K. P. duty and scrubbing decks, and sending them back to industry, and by permitting a limited number of boys to take technical training. This appears to be about the least that must be done if we are to avoid a disastrous shortage of trained scientists in an age which every 5 minutes we describe as "scientific."

Radio Address of Pope Pius

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of Pope Pius' broadcast:

Here at last we behold the end of this war, which, during almost 6 years, has held Europe in the grip of the most atrocious suffering and most bitter sorrow.

A cry of humble and ardent gratitude arises from the very depths of our heart to the Father of Mercies and the God of All Consolation.

But our canticle of thanksgiving is accompanied with the suppliant prayer to implore also of divine omnipotence and goodness the termination, in accord with justice, of the sanguinary warfare in the Far East.

On our knees in spirit before the tombs, before the ravines disturbed and reddened by blood, where repose the innumerable corpses of those who have fallen, victims of the fighting or of inhuman massacres of hunger, or of misery, we recommend them all in our prayers, and especially in the celebration of the Holy Sacrifice, to the merciful love of Jesus Christ, their Saviour, and their judge.

And it seems to us that they, the fallen, are giving warning to the survivors of this cruel scourge and are saying to them: Let there arise from the earth, wherein we have been placed as grains of wheat, the molders and builders of a new and better Europe, of a new and better universe, founded on the filial fear of God, on fidelity to His Holy Commandments, on respect for human dignity, on the sacred principle of equality of the rights of all peoples and all states, large and small, weak and strong.

The war has created on all sides chaotic ruin, both material and moral, such as mankind has never known in the entire course of human history. The task of this hour is to rebuild the world.

As the first element of this restoration, we long to see, after so long a period of waiting, the prompt and speedy return, insofar as circumstances permit, of the prisoners, of the interned, combatants, and civilians, to their homes and to their wives, children, and the noble works of peace.

To all them we say: Let not your energy flag nor your courage fail; dedicate yourselves ardently to the work of reconstruction, sustained by a strong faith in Divine Providence. Apply yourselves to labor, each one at his post, resolute and determined, with a heart animated by a generous, indestructible love of one's fellow man.

It is difficult, certainly, but it is also a holy undertaking that awaits you in repairing the immediate and disastrous consequences of the war. We refer to the decay of public order, misery and hunger, the relaxing and brutalizing of customs and usages, the lack of discipline among the youth.

By so doing, little by little, you will prepare for your cities and your villages, for your provinces and your fatherlands, a lot more acceptable and renewed vigor to your blood.

With the threat of death lying in wait driven from the earth, from the sea, and from the sky, the lives of men, creatures of God, and that which remains to them of their private and common possession henceforth assured by the laying down of arms, men can now set free their minds and spirits to the building of the peace.

If we limit ourselves to consideration of Europe, we find ourselves face to face now with gigantic problems and difficulties which we must overcome if we wish to plan the way to a true peace, the only one that can be lasting.

Peace, indeed, cannot flower and prosper except in an atmosphere of secure justice and of perfect fidelity, joined with reciprocal trust, mutual understanding and benevolence.

The war has aroused everywhere discord, suspicion and hatred. If, therefore the world wishes to regain peace, it is necessary that falsehood and rancor should vanish and in their stead that sovereign truth and charity should reign.

Above all, however, in our daily prayers, we should beseech God constantly to fulfill his promise made by the mouth of the Prophet Ezekiel, "And I will give them one heart, and will put a new spirit in their bowels: and I will take away the stony heart out of their flesh: that they may walk in my commandments, and keep my judgments, and do them: and that they may be my people, and I may be their God."

May the Lord God deign to create this new spirit, His spirit, in peoples, and particularly in the hearts of those to whom he has entrusted the responsibility of establishing the future peace.

Then and only then will the reborn world avoid the return of the thunderous scourge of war and there will reign a true, stable and universal brotherhood, and that peace guaranteed by Christ even on earth to those who are willing to believe and trust in His law of love.

A New Way To Make the Desert Bloom

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. MURDOCK. Mr. Speaker, millions of acres of public domain in the semiarid West have been used for livestock grazing. Overgrazing and periodical dry years have greatly reduced its carrying capacity and the vegetative cover so necessary in conserving moisture, preventing floods, and protecting the soil against erosion. The largest percentage of this western range land will never be fit for any other agricultural use. It is, however, of the utmost importance that we restore the once-abundant vegetation in our efforts to protect our investment in irrigation, reclamation, and power projects.

How to bring about a restoration of this cover and its former carrying capacity and, if possible, increase the forage and cover on these areas, is an economic problem of unestimated importance to the whole West and to the Nation. Without discounting the spendid work which has been done by Government agencies on our forests and in our range-control and public-land management and on our drainage areas and watersheds, we still seek for better and cheaper methods than have heretofore been used. I refer to the proposal to seed or reseed vast areas quickly from airplanes.

This proposal has appealed to other public officials and to publicists alike, as evidenced by the fine article beginning on page 166 of the June issue of Fortune magazine. The fact that one of the Nation's outstanding publications gives this proposal such wide publicity is highly significant of their evaluation of the suggestion. This article explains Dr. Lytle S. Adams' plan for sowing seed, incased in pellets, over 20,000 acres per hour, and is as follows:

THE FARM COLUMN

TWENTY THOUSAND ACRES PER HOUR

"The farm is still the broad enduring base upon which the entire United States economy rests."

Dr. Lytle S. Adams, of San Diego, inventor of an airplane mail pick-up, has developed a peacetime use for war transport planes and, at the same time, a method for the quick and inexpensive planting of large acreages. He claims he can plant 20,000 acres per hour with his airplane seed-pellet disseminator. Rice has been successfully sown from airplanes, but most other attempts at aerial seeding have failed because the seeds were too light, and, if not blown away, were easily destroyed by animals or weather. It is well known that bird and animal droppings play a large role in natural seeding, and Dr. Adams thought a mechanical way could be found to simulate and magnify that humble function.

Dr. Adams noted that nature's way was effective because the animal droppings provided weight, protection, and fertilizing elements to give the seed high germinability and a good start in life. His experiments showed that a clay or adobe coating would provide weight and protection, yet would dissolve easily in most soil to release the seed after it had penetrated the ground. By mixing nitrogen, phosphorus, potash, and vitamins in the protective coat, he gave the seed its "starter." The coating also contains a rodent and insect repellent. By hammermilling the seed to detach the husk he speeded up germination 24 to 48 hours. And finally, by inventing a machine that can turn out 30,000 pellets per minute he prepared the seed pellet rapidly and cheaply.

While Dr. Adams' original idea was to seed large acreages of range land and reforest blighted areas by airplane, a secondary but potentially even wider use occurred to him. Many vegetable seeds are too small to be used efficiently in the ordinary planter, but a pellet coating would bring them up to suitable size. This year Dr. Adams is making pellets of carrot, spinach, lettuce, celery, and onion seeds and will plant them by ordinary drills or planters in various test plots around the country. Thus, Dr. Adams hopes, everyone from commercial growers to victory gardeners may utilize his invention.

In airplane seeding, Dr. Adams uses another Adams invention, the seed disseminator, a kind of rimless wheel with hollow spokes. The device is mounted under the plane with its tubes parallel to the earth. It provides a controlled, wide band of dissemination with as many seeds per acre as desired. The weight of the pellet plus the altitude of the plane determines penetration. Hardness of the soil can be overcome and optimum planting depth can be reached by changing the elevation of the plane.

In most instances, airplane planting will be done when a rain is expected, providing the soil crust is not impermeable. If it is crusted hard, as it often is on western ranges, the seeding can be done just after a rain. Where rain is so unreliable that no forecasting is any good (common in the arid southwest), Dr. Adams will use a metal-enclosed pellet with holes in the top to admit moisture. This "bullet," largely used in reforestation, will drive into the hardest soil. The seed lies dormant, yet fully protected, until rain eventually comes to start its growth.

The possibilities of this type of airplane seeding will be breath-taking if this year's experiments prove it practicable. From south Texas to California are 93,000,000 acres of semidesert range land overgrazed and sadly in need of replanting (Fortune, November 1944). Other great areas west of the one hundredth meridian and from the Canadian to the Mexican border could have their carrying power in animal units increased phenomenally. The new method of seeding may play a part in reversing the trend toward abandonment of arid land in the dust bowl, may raise the yields in large grain-producing areas.

Because of the speed of seeding, the low manpower requirements, and the certainty of germination, costs should be extraordinarily low. Dr. Adams estimates that range land can be reseeded for half the present cost of about $3.20 per acre. Later, when postwar equiment is available, this figure should be even lower. Savings in grain sowing will be somewhat less; wheat, for instance, in blocks of 500 or more acres, could be seeded for 75 cents per acre (present estimated cost, 90 cents). The cost of seeding vegetables will be reduced materially by the high rate of germination and by controlled spacing, which eliminates the need for thinning. For reforestation Dr. Adams claims the most spectacular saving: costs of $3.50 per acre, compared with $15 for hand seeding.

This year, seed-pellet experiments will be carried on in Texas at the giant King Ranch and at the Texas Experiment Station in Spur, and also at San Diego. A bill presented to Congress asks for $2,500,000 to be spent by the Department of Agriculture and the Department of the Interior for renewing and increasing forage on forest and range lands in the public domain through the Adams plan. If the tests prove out, Dr. Adams expects that millions of acres of public lands will be rejuvenated, and veterans will be given new and healthful jobs, both on public lands and on large private ranches that already show cash-on-the-barrel-head interest in the Adams method.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. CANFIELD. Mr. Speaker, Gould Lincoln, covering the San Francisco Conference for the Washington Evening Star, yesterday sent his newspaper a dispatch on the subject of universal military training. It is both timely and challenging. His conclusion corresponds with that I have reached after two visits to our fighting fronts, this year and last. I sum up my thoughts in these words:

We must persist in our efforts for world peace and we must remain strong militarily. We live in a hard-boiled world in which men's hearts have not yet become filled with the spirit of peace. Bitterness, resentment, intolerance, suspicion, and hatred still plague mankind and nations are respected according to their ability to defend themselves and defeat the aggressors. It is my profound hope that we in America will be able to work

out some sane, democratic system of universal physical education and military training which, while not Prussianizing our Nation, will keep our youth ready and fit for any emergency arising in the days ahead which it would be folly to describe other than uncertain.

Mr. Lincoln's dispatch follows:

SAN FRANCISCO, May 31.—Moscow's announcement of the biggest peacetime military training schedule ever ordered in the Soviet Union, with thousands of 15- and 16-year-old boys called up for Red Army training, lays an emphasis on national defense, an emphasis which should not be lost sight of in the United States. Not because this country need expect or fear war with the Soviet Union—there is every reason to believe that the two nations can and will live at peace—but because of the wisdom of universal military training.

Twice within a quarter century the United States was caught without adequate military forces when attacked. It can happen again. This country, along with Russia and the other United Nations, is at work in San Francisco on a charter for a world organization to maintain peace. It is a great adventure. Nevertheless, the United States must take adequate measures to insure its own safety, certainly until it has been proved the world intends to live in peace.

For months there have been pending in Congress proposals to establish a universal peacetime military training system. Similar proposals were made after the close of the First World War, but were kicked aside. If they had not been thrown into the discard the whole course of history might have been different, and this country might not have been compelled to fight the greatest war of all time, war which is not yet ended.

In order to avoid giving an impression that the United States was talking of world peace in San Francisco while in Washington Congress was preparing to set up universal military training, the House Committee on Future Military Planning laid the training proposals aside. "Let's do nothing to rock the boat" was the argument advanced. "Let's wait and see what comes out of the United Nations Conference." The Soviet Union is more realistic. It has gone right ahead with its plans for peacetime defense training. At the same time it has joined with the United States and the rest to form a peace organization.

Everyone hopes the new organization will work 100 percent. No one knows whether it will or not. In any event, it still remains for the Great Powers to be in position to enforce peace by arms, if necessary, and to do so they must have military strength. This country has huge armed forces today. But even now partial demobilization has begun since the war in Europe ended. The sooner a military training plan for the years ahead is developed, the better. President Roosevelt had come around to the support of such a plan. President Truman can give it added impetus, if he will, with a special message to Congress.

Russian Lt. Gen. N. N. Pronin, chief of the training administration of the Commissariat for Defense, announcing the call for Russian youth, said, "General military training in the present period should be conducted on an even higher level than in the days of war. The peaceful period into which our country has entered should not lessen our attention to the problems of defense." He stressed, too, the value to the youth of the nation of military training, for physical hardening, for the inculcation of decisiveness, endurance, stubbornness, and initative.

The charter of the proposed world organization for peace refers to possible future regulation of armaments and disarmament. The military staff committee, which it proposes to set up to aid the Security Council, is to look into such matters in the future, but its main job is to assist the Council on all questions relating to military requirements for the maintenance of peace. Obviously, any question of limitation of armaments or of disarmament lies in the dim future. It's up to Americans to prepare for national defense in the world as it is today.

Governmental Bretton Woods Propaganda Drive Blacks Out Democratic Processes

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. BUFFETT. Mr. Speaker, the Bretton Woods committee report fails to include in its index a page guide to the minority views. In an ordinary committee report this oversight would be unimportant. However, in this case the report is both bulky and confusing, and is further complicated by lengthy appendix material.

Accordingly, in the effort to get just a minimum expression of the opposition views before the membership, I am inserting the section of the minority report entitled "Governmental Bretton Woods Propaganda Drive Blacks Out Democratic Processes":

GOVERNMENTAL BRETTON WOODS PROPAGANDA DRIVE BLACKS OUT DEMOCRATIC PROCESSES

Regardless of the merits or demerits of the Bretton Woods proposal, the propaganda drive accompanying it demonstrates the fearful power of government to influence, through control of modern publicity facilities, the actions of a legislative group. The ultimate consequences of such power, ruthlessly used in this instance, are terrifying to us, who have watched it operate at close range. Those interested in the future of liberty in America should understand this State use of the instruments of public information.

Your attention is directed to an editorial prophecy of the New York Herald Tribune, March 4, 1945. We can testify that the forecasts in that editorial have been borne out by events:

"There is a disturbing accumulation of evidence that the administration is determined to employ the most ruthless strong-arm tactics to drive through Congress without alteration the so-called Bretton Woods program, on which hearings are scheduled to begin this week before the Banking and Currency Committee.

"For some time past there have been reports that sponsors of this legislation have boasted that they had 'greased the wheels' to slide the measure through. Events have shown that such reports were not without foundation.

"But a more insidious weapon than any of these is the studied effort on the part of the administration to tie the issue of all-or-none acceptance of the Treasury program with the issue of isolation. * * *

"* * * the issue of isolationism here is a synthetic one, created for purely political purposes."

Except for the substitution of a silk-glove technique, the fears of the Herald Tribune were well founded. Departments of the Government have shrewdly used every possible method of propaganda, most of which today are conrolled by the Government. Cunningly using the prestige of public office, sales meetings were reported held with radio commentators, news reporters, columnists, religious leaders, and others who play a decisive part in influencing public opinion in America.

With a technique and effectiveness resembling a totalitarian ministry of propaganda, through these influential avenues, the Nation has been drenched with publicity for Bretton Woods.

Officials of organizations of imposing voter membership filed into the hearings demanding that the committee pass this confusing and intricate proposal without change. To our knowledge, not a single one of these organizational witnesses had secured first-hand testimony giving an opposition appraisal of this plan. Upon questioning, these witnesses usually declined to pretend to be able to discuss the proposals themselves.

This political pressure, plus other less obvious tactics, were carried on behind the protection of lengthy and carefully staged hearings.

We could write a lengthy report detailing the propaganda methods used to promote this plan. Instead, we summarize with this conclusion:

This experience constitutes sobering evidence to us that the propaganda weapons in the hands of government can eliminate the processes of orderly legislation, based upon a fair presentation of both sides. Unless opposition to the regime in power secures equal publicity facilities to present its views to the people, bad government or bad proposals cannot be effectively exposed. Until those on both sides of a public question have equal opportunity to present their case to the people, representative government is not functioning.

Postmastership at Cleveland, Ohio

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. CROSSER. Mr. Speaker, for 8 months a vacancy has existed in the office of postmaster for the Cleveland postal district. On May 31, the President appointed and the Senate confirmed Mr. Guy R. Lucas as postmaster for the city of Cleveland.

I have urged that it was for the best interests of the postal service that a career man, so-called, that is, a man who has spent his lifetime in the service, should be placed at the head of the office.

The highest quality of service can best be assured by observing the principle of selection on the basis of superior ability, efficiency, and attention to duty. A most important factor to be considered in connection with the selection of a person to the head position in any service is the principle of seniority, chiefly because of the wholesome effect on the entire service. The appointment of a person having a record for efficiency and ability, and with 4 or 5 years to serve in the evening of his life, is most desirable. Such an appointment constitutes for everyone in the service an incentive to devote his best efforts to establish a record for good service. Those in the service

would then feel that when they will have served 40 years or more they will have an opportunity, in fair competition, to secure the highest award in the service.

A great many prominent citizens of Cleveland have spoken in the highest terms of Mr. Lucas' ability and hard work in the service. Let me quote some of the statements which have been made in regard to Mr. Lucas.

First, let me quote from the Cleveland Plain Dealer of Sunday, October 1, 1944:

Lucas seems to us by far the more desirable candidate. Harbour is only a postal clerk, while Lucas has had years of executive experience and must have a broader knowledge of the complicated business. Information volunteered by postal employees is to the effect that for years other postal officials, including the postmaster himself, have referred all seemingly insoluble problems to Lucas—an indication that he knows the business thoroughly.

We therefore urge the Postmaster General to place Lucas in this responsible position.

Excerpts from page 52 of report of survey of the delivery division of the Cleveland, Ohio, post office dated May 7, 1930 by inspectors Hart, Hadfield, Jefferson, and Mouser:

Mr. Lucas is particularly efficient and has rendered especially meritorious service, and consequently his promotion to the $3,100 grade is recommended in a separate report.

Mr. M. J. McGuire, 8116 Dorver Avenue, Cleveland, Ohio, who has been in postal service more than 40 years, says:

If Lucas is named, he will honor his sponsor, and the Cleveland office will so function as to make a career man postmaster a permanent institution, and Crosser's efforts in that direction will be recognized as just another illustration of a statesman, rather than a spoils politician, acting for good government.

Mr. F. H. Cogan, member of legislative committee of branch 46, National Association of Postal Supervisors, wrote from Cleveland on November 15, 1944, as follows:

My many years of service, personal contact, organization experience has fitted me so that I may speak advisedly on this subject.

Being in a position to observe at various times throughout the year the personnel of the Cleveland office, I believe that Guy R. Lucas would make an outstanding executive whose successful operation of the office would reflect credit upon those who were responsible for his endorsement. Favorable comment by visiting commissions of postal inspectors in the past, and their recommendation to the Post Office Department have placed his name in the vanguard of efficient postal workers.

The president of the National Association of Letter Carriers, Mr. W. C. Doherty, in a letter dated at Washington, D. C., September 22, 1944, said:

I am taking the liberty to personnally recommend that Guy R. Lucas be appointed postmaster at Cleveland. He is an assistant superintendent of mails at the present time but did serve as a letter carrier during his early postal service.

I know that Mr. Lucas is well qualified to serve in the capacity of postmaster. His long years of service make him well suited for the exacting duties required in that particular office.

The vice president of the Ohio Bell Telephone Co., Mr. John J. Joseph, in a letter dated August 9, 1944, said:

Mr. Lucas has been in the postal service for 42 years and at the present time is assistant superintendent of mails. Through various sources throughout the years I have been informed that he is a very efficient public servant and has thorough knowledge of the many operations and functions of the Cleveland office. Perhaps one of his strongest points is the respect and esteem in which he is held by his contemporaries.

I have known the Lucas family for many years and consider it a genuine privilege to commend Mr. Lucas to you. I feel sure that his selection would meet with general approval here in Cleveland.

Mr. Joseph C. Hostetler, of the law firm Baker, Hostetler, and Patterson, former assistant city solicitor, and a law partner of former Secretary of War Newton D. Baker until the latter's death, enthusiastically recommended the appointment of Mr. Lucas.

General Statement of Minority Views on Bretton Woods

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. BUFFETT. Mr. Speaker, the Bretton Woods committee report fails to include in its index a page guide to the minority views. In an ordinary committee report this oversight would be unimportant. However, in this case the report is both bulky and confusing, and is further complicated by lengthy appendix material.

Accordingly, in the effort to get just a minimum expression of the opposition views before the membership, I am inserting an excerpt from the general statement of the minority report on the propaganda aspects of Bretton Woods:

GENERAL STATEMENT

The minority believes that the future of civilization depends upon the maintenance of the solvency of the United States and the stability of the dollar. Accordingly, we share with every thinking citizen the earnest desire to establish sound foundations for international cooperation and stable monetary conditions everywhere. The achievement of these purposes is the high road to the restoration of peace and personal liberty.

The question before the House is not the need for currency stability and international cooperation. In a world where the only place the value of money often can be determined is in black markets, resulting from fiat currency, no one can question the desperate need for stability. The question is whether the Bretton Woods proposals will (1) promote the objective of monetary stabilization and cooperation, (2) constitute the best available means for achieving that purpose.

The Bretton Woods proposals are so intricate and complicated that the attempt to discuss them adequately is a difficult, if not an impossible, task. During the lengthy hearings various experts interpreted the agreements in a multitude of ways. More significant, however, was the fact that no substantial evidence was offered that the delegates who ratified the plan were in agreement on the meaning of many vital clauses which determine the operation of the so-called stabilization fund.

Accordingly, we urge the Members of the House to appraise this proposal, not by the stated objectives, but by whether or not this diversely understood proposal in its present state, is the best approach, or even a practical approach, toward the achievement of monetary stabilization.

We believe the Members of Congress are realists. We submit that the plan's advocates should prove conclusively, by authoritative evidence, that there has been a genuine meeting of the minds among the principals who are considering these agreements. Unless competent evidence is placed before the House that the nations understand each other on the modus operandi of the plan, truly intelligent debate is impossible. Rosy and glowing American oratory about the benefits of this plan is either futile, or worse still, misleading, until Congress secures competent testimony regarding the conceptions of this proposal held by other nations.

Certainly recent events should teach us that international agreements, like individual contracts, should represent a clear and definite understanding between the signatories. Even at the outset Bretton Woods lacks this elemental virtue.

Accordingly, we believe the plan, with or without the committee amendments, defective and unworkable. Members may find guidance in appraising the scheme from the analysis by one outstanding economist:

"Some people seem to believe that Bretton Woods is a cheap way of buying currency stability, or even world peace. It is nothing of the kind. It is a very high fee for entering the game. We have no right to sit down to play it until we know what the rules are going to be and how the others propose to play."

San Francisco Conference and World Conditions

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, June 1 (legislative day of Thursday, May 31), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on the subject of the San Francisco Conference and world conditions, which I delivered over the radio last Sunday night in connection with the junior Senator from Louisiana [Mr. ELLENDER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The results of the San Francisco Conference are not yet clear. We do not yet know what actual power will be vested in the new league to determine the shape of the world to come. If the league exists and has real power to curb aggression or to settle the complicated problems which are sure to arise in the future, that is one thing. If the league is going to be a weak debating society, that is another thing.

In any case, we must try to settle the fundamental problems which have already given us two terrible world wars and are liable to give us a third and worse one.

The common people, ordinary folk like you and me, don't want war. We are always amazed when it comes, anyway. This time we had better make up our minds that we are

going to stop it. The whole question about where we go from San Francisco relates simply to this: How do we stop the world from the disaster of another war?

I notice that our opponents, for whom I have a great personal respect, are apparently of the same mind as I, but they keep asserting that in addition to going into a new security league, we have to be armed to the teeth. Now, if we are armed to the teeth, the other fellow is armed to the teeth, and when you have two or three big fellows armed to the teeth, with a bunch of little fellows also armed to the teeth, shooting is going to begin somewhere. Being armed to the teeth can mean only one thing, and that is that the Nation is prepared to take the law into its own hands. That can only mean the rule of force and not the rule of law. In fact, that is the great objection I see to the plan of the league in that it is concentrated too much on the rule of force. It speaks of the right of a few large states to police other and smaller countries, but the big states themselves cannot be policed. That isn't organized security; it is organized power politics; it is organized suspicion, organized fear. Fear of what—frankly, I don't know. It must be fear of each other.

We will have to get over some of our deep suspicion of the Russians. We will have to agree that the Chinese and the Orientals can be free of interference by European imperialists for whom we will otherwise be forced to fight a war every decade or so. We will have to seek the "four freedoms" not only for ourselves, but for everyone. In short, we will have to make the business of being a good neighbor a practical policy.

We will have to abolish those terrible war-making machines, the cartels and monopolies. If there is anything to the reasons advanced for cartels and monopolies, then they should be owned and controlled by the people and not by a few financiers who can manipulate them to their own advantage.

There are certain newspapers who are already pounding the drums of war. They tell us, for example, that the United States must sooner or later fight Russia. Some of them even suggest that we may have to fight Great Britain. I say that all of this is fantastic. I don't think the Russian and the British people are fundamentally different than we are. I think the common people over there hate and detest war, just the same as we do. They know what it means to lose their sons and brothers and to saddle their economies with enormous tax burdens. We have fought a great war for what we consider a noble purpose, to rescue the world from tyranny. I tell you now, that we have fought this war to rescue the world from the tyranny of—war itself. We have fought to create a world in which war and tyranny can never exist again. If we fail to create such a world, and to start by creating this view within our own hearts, then we have failed miserably.

I say let us start with the idea that we have won this victory and that we have won it with real allies at our side, and not a lot of coyotes who will struggle in turn at the garbage pile of power.

Under no circumstances should the youth of this country be called upon to fight the youth of any other country—yes, including that of Russia. Let those who wish enshrine war as the proper goal of man, but they have had the consequences of it. Let us enshrine peace, and if to love peace makes me a worse man than I should be, then I will have to accept the consequences of it.

I suspect that it should be part of our policy not only to adjust our relationships in practical terms with all the other nations of the world but also our relationships with some of our own citizens, with the professional war mongers, Fascist personalities, and the whole dying tribe of pultocrats who look with terror on the Russian experiment and who feel it is our duty to go in there and crush it. I don't know whether the affairs of this country have been run by 60 leading families, as has been alleged, but if it is true, it is time that we ripped their grip off of the future policies of America and returned the future of this country to the people who have to fight the wars and build the wealth which wars waste. In my judgment, there must be a full and complete spiritual revival in this country. Hatreds and prejudices must be abolished. Brotherly love must be really instituted in fact. There must be an end to 1 percent of the people owning 99 percent of the wealth. The wealth must be distributed on a more fair and equitable basis, equality of economic opportunity must be given to every man and woman, and it follows that what takes place in America will take place in every country upon the face of the earth. I welcome the day when airplanes and ships will bring thousands of the youth of Mexico, Iraq, Russia, China, India, and every country on the globe to attend schools here in America, and when those same airplanes and ships return they will bear to every other country folks from America. During the war we sent our young men to the four corners of the earth for war purposes. Now let us send them out for educational purposes. If San Francisco teaches us anything, it teaches us that the next war should be a war not of killing, maiming, and wounding but a war against ignorance everywhere, a war for brotherly love, a war for clean living conditions, for a decent standard of living, fair honest wages everywhere upon the face of this earth. That is what I hope and pray will follow the San Francisco Conference.

Bretton Woods Should Be Honestly Considered by Itself, and Not Be Falsely Tied to Peace Conferences

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. BUFFETT. Mr. Speaker, some promoters of Bretton Woods lack either the integrity or the intelligence to present this scheme straightforwardly.

So, with cunningness or stupidity, they declare that it is essential to the Dumbarton Oaks proposals and the San Francisco Conference.

Are they telling the truth? Or is this simply a trick in the Hitler-Goebels fashion—you know that method—tell a big lie, keep telling it, and pretty soon the people will be believing it, and repeating it themselves.

The answer to this falsehood can be found in the New York Herald Tribune editorial columns, back on March 4. The Herald Tribune is a newspaper that has been generally accepted as a leader among those with international views. They indicated that hooking up Bretton Woods with peace conferences was deceitful and dishonest, as pointed out in the following editorial:

THE BRETTON WOODS ISSUE

There is a disturbing accumulation of evidence that the administration is determined to employ the most ruthless strong-arm tactics to drive through Congress without alteration the so-called Bretton Woods program, on which hearings are scheduled to begin this week before the House Ways and Means (sic) Committee.

For some time past there have been reports that sponsors of this legislation have boasted that they had "greased the wheels" to slide the measure through. Events have show that such reports were not without foundation. When the House was being reorganized in January, membership of the Banking and Currency Committee, according to George B. Bryant, Jr., Washington correspondent of the Wall Street Journal, in a recent dispatch to that newspaper, was selected with unusual care. The five Democratic vacancies on this committee—which will have much to say about continuing New Deal financial and economic controls, in addition to its international financial plans—were filled with Democrats of the New Deal school, and it was then expanded to include two more. This new committee, which the administration refers to as "streamlined," and Republicans as "stacked," had its trial test a month ago on the George bill, and for the first time in recent years the Democratic Members voted as a unit in opposition to a Republican-sponsored measure. Next, when the Wagner-Spence bill, designed to give legislative effect to the Bretton Woods program, was introduced it was revealed that it proposed to finance the initial needs of the monetary fund from the so-called gold profits in the present stabilization fund. Critics of this procedure interpret it as a device for bypassing the Appropriations Committee.

But a more insidious weapon than any of these is the studied effort on the part of the administration to tie the issue of all-or-none acceptance of the Treasury program with issue of isolation. The theme is constantly reiterated that, as Dean Acheson, of the State Department, put it before representatives of 104 national organizations invited to Washington for a pep talk by the Treasury on Wednesday, other nations "would be chilled toward Dumbarton Oaks" if the Bretton Woods proposals for international cooperation in the financial field are rejected.

It would be a grave error of Republican leadership to permit itself to be maneuvered into a false position before the public on this measure, for the issue of isolationism here is a synthetic one, created for purely political purposes. The $18,000,000,000 financial set-up, which is conveniently referred to as the Bretton Woods program, did not emanate with that conference nor was it drawn up under any authorization from Congress. It was developed out of plans produced by Lord Keynes and associates on behalf of the British Treasury and Dr. Harry White and others acting for our Treasury and as represented a tentative agreement among unnamed technical experts of 30 nations. Discussions at Bretton Woods were confined rigidly to this joint statement of principles, and no attempt was made to explore other proposals. Largely because of this limitation on discussion, the delegates were not authorized to bind their respective governments. Lord Keynes himself made this unequivocally clear when he declared:

"We (the British delegation), in common with other delegations, reserve the opinion of our government on the document as a whole and on every part of it * * * We do not even recommend our government to adopt the result. We merely submit it for what it is worth to the attention of the legislators concerned."

In other words, the so-called Bretton Woods program was never intended as anything but a starting point for legislative action to achieve the objectives it seeks. It is a complete distortion of the facts to imply that any modification of that agreement could be construed as in any sense a repudiation of the achievements of Dumbarton Oaks.

Postal Pay and Mr. Gary

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. ROBERTSON of Virginia. Mr. Speaker, the following editorial appeared in a recent issue of the Times-Dispatch, published in Richmond, Va.:

POSTAL PAY AND MR. GARY

The House last week passed the bill to increase the salaries of postal workers. Those who are familiar with the postal pay situation know that this group of Government employees has been long-suffering in this respect. The postal workers have not had a general pay increase in more than 20 years, and their basic scales are among the lowest in the Government service for the character of work performed. It is to be hoped that the Senate will give early approval to this measure for the correction of a long-standing injustice to one of the most faithful and hard-working groups of civil servants.

The new Representative from this district, J. VAUGHAN GARY, made the consideration of the bill the occasion for his maiden speech in the House. "Some of my constituents," Mr. GARY said, "will probably think it strange that, although during my campaign, I emphasized the need for economy in government during the postwar period, I am making my first speech in support of salary increases." He then proceeded to make a persuasive statement in support of the measure.

We believe we can assure Mr. GARY that no one is likely to hold it against him for voting with the majority on a bill so obviously deserving that it was passed by a vote of 361 to 1.

Important Reductions in Telephone and Cable Rates

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. HAVENNER. Mr. Speaker, the Federal Communications Commission has recently put into effect very important reductions in domestic long distance telephone rates and in international telegraph and cable rates which, it is estimated, will save the users of these communication services approximately $21,000,000 a year. I have just received the following explanatory letter from Commissioner Ray C. Wakefield, California member of the FCC:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., May 30, 1945.

Congressman FRANCK R. HAVENNER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HAVENNER: Two significant actions affecting your California constituents have been taken by the Federal Communications Commission recently. One involves a reduction in long-distance telephone rates and the other in international telegraph and cable rates. * * *

I am pleased to be able to report these reductions to you as I have been particularly interested in the telephone and telegraph work of the Commission. Commissioner Walker and I constitute the telephone committee. Particular credit is due to Commissioner Walker for the coast-to-coast long-distance telephone reductions which are effective July 1, 1945. When Commissioner Walker came to the Commission in 1934, he visualized the possibility of the $2.50 rate. At that time the rate was $10.25 station-to-station and $12.75 person-to-person for a 3-minute call. Effective July 1, 1945, the rate will be $2.50 station-to-station and $3.50 person-to-person as compared with the present rate of $4 station-to-station and $5 person-to-person.

The international telegraph and cable rate reductions which became effective May 1, 1945, are the most drastic ones ever effected in lowering communication costs for the public. For example, formerly the rate for a full rate ordinary message from San Francisco to Italy was 41 cents per word; from New York to Italy, the rate for the same message was 27 cents per word. Under the reduced pattern, the rate for the same message from San Francisco to Italy is 24 cents; or from New York to Italy, 20 cents. The former rate from San Francisco to Russia was 44 cents and to Denmark, 40 cents; or from New York to Russia, 30 cents, and to Denmark, 26 cents. To both points the rate is now uniformly 24 cents from San Francisco, or 20 cents from New York.

As you know, the charges for international messages are composed of two basic elements (1) the charge for the domestic service in sending the message from the point of origin within the interior of the United States to the place where the message is turned over to the radio-telegraph or cable carrier which is, generally, New York; and (2) the charge for the message by the radio-telegraph or cable carrier for the overseas transmission. As further indicated by the attached news releases, the charges for such messages vary according to the class of service rendered, that is, ordinary service, which is carried on a full-rate basis, code, deferred, and night letter.

The reduced basic rate pattern of 20 cents per word for the full-rate ordinary message applies to international messages from the United States destined to foreign points of communication in Europe, Latin America, and the Philippine Islands. Further, in view of the reduced United States land-line charges (the domestic service) on overseas telegrams and cables which simultaneously became effective on May 1, 1945, it is to be noted that residents of California will receive even a more substantial reduction in the charges for such communications than residents of New York. Prior thereto and with the exception of traffic from the United States to South America, the West Indies, and Central America, the United States land-line charges for messages from the west coast to New York were based upon the distances of the overland haul and were added to the basic international rate. Residents of the west coast paid 14 cents a word for the land-line haul of full-rate ordinary messages destined to foreign points; residents of the Middle West paid 8 cents, and residents of the East paid less. With respect to traffic from the United States to South America, Central America, and the West Indies, in a proceeding which I held about 2 years ago, looking toward the establishment of reduced rates from the United States to South America, the land-line rate differentials were eliminated and a flat 4-cent rate for the full-rate ordinary message was applied to traffic from all points beyond New York destined to Latin America.

By the rate reductions, effective May 1, 1945, this principle of a flat, uniform land-line rate for all points beyond New York is no longer restricted to traffic destined to Latin America, but has now been extended to international traffic destined to all parts of the world. Accordingly, west-coast residents now have added to the basic rate for the full-rate ordinary message only 4 cents as compared with the 14-cent former land-line rate.

The new rate pattern, of course, provides for proportionate reductions in the other message classifications, such as code, deferred, and night-letter telegrams. This information is set forth in the enclosed News Releases. In this connection, you will be interested in knowing that traffic figures indicate that only 5 percent of international traffic is in the full-rate classification. Thus, the bulk of traffic will now be transmitted at costs substantially below the 20-cent figure.

The foregoing rate reductions represent only a part of the Commission's activity in the field of postwar international communications. There is even much more to be accomplished in order to insure a low-cost, prompt, and uninterrupted flow of communications between the United States and all places of the world, and the Commission will continue with its efforts in this field.

Sincerely yours,

RAY C. WAKEFIELD,
Commissioner.

The Cattle Industry and Tariff Reduction

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, June 1 (legislative day of Thursday, May 31), 1945

Mr. LANGER. Mr. President, I ask to have printed in the Appendix of the RECORD a statement by F. E. Mollin, executive secretary of the American National Livestock Association, setting forth the view of the cattle industry with reference to a further reduction in the tariff.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE CATTLE INDUSTRY LOOKS AT A FURTHER REDUCTION IN THE TARIFF

We present below some statistical information as to the cattle population in the United States, Canada, Mexico, Cuba, and in South American countries. Also figures on United States beef production, cattle and calf slaughter and the amount of beef exported from Canada in recent years. Also figures as to existing cattle quotas and the tariff cuts already made under the reciprocal trade program to date on cattle, dressed beef, canned beef, and hides.

Cattle population

United States:	
1940	68,801,000
1945	81,760,000
Mexico:	
1930	10,083,000
1940	11,603,000

(No recent figure available. Cattle numbers thought to have increased since that time.)

Canada:	
1939	8,375,000
1944	10,346,000

Cattle population—Continued

Argentina:

1937	33,207,000
1942	31,460,000

(Decrease no doubt due severe drought of last 2 or 3 years.)

Uruguay:

1937	8,297,000
1943	6,256,000

(Decrease no doubt due severe drought of last 2 or 3 years.)

Brazil:

1938	40,076,000
1942	42,500,000

Cuba:

1941	5,335,000
1942	4,897,000

(1936–40 average 5,024,000.)

Beef and veal production

United States:

	Pounds
1936 (high for peacetime)	8,433,000,000
1939	8,002,000,000
1944	10,779,000,000

(For first quarter 1945 total beef and veal production 345,000,000 pounds above same quarter 1944.)

Canadian exports

Total Canadian exports cattle and beef converted to dressed-beef basis:

1938–42: Average 90,000,000 pounds.
1944: Exceeded 112,000,000 pounds.
1945: Estimated to exceed 134,400,000 pounds.

(Note 1945 figure is increase of approximately 50 percent over 5-year average 1938–42.)

Total slaughter cattle and calves

United States:

1942	27,619,000
1943	27,683,000
1944 (revised)	33,700,000

Total slaughter (farm slaughter not included) first 4 months of 1945 14 percent above same 4 months of 1944.

Quotas under trade agreements made with Canada and Mexico now suspended for the duration

CANADIAN AGREEMENT

1936:

Cattle weighing less than 175 pounds	51,933
Cattle weighing more than 700 pounds	155,799

1939:

Cattle weighing less than 200 pounds (Superseding the original quota on cattle weighing less than 175 pounds.)	100,000
Cattle weighing more than 700 pounds	225,000

MEXICAN AGREEMENT

1943: Cattle weighing over 200 pounds and less than 700 pounds	400,000

(Recently Canadian meat interests have suggested that the British market for Canadian beef may not extend beyond 1946 and have suggested seeking a raise in the quota on cattle weighing more than 700 pounds from 225,000 head to 500,000 head. If this request were granted it would make a total quota for the two countries of exactly 1,000,000 head of cattle.)

Reduction in tariff

CANADIAN AGREEMENT

1936:

Cattle weighing more than 700 pounds reduced from 3 to 2 cents per pound.
Calves weighing less than 175 pounds reduced from 2½ to 1½ cents per pound.
1939: Cattle weighing more than 700 pounds reduced from 2 to 1½ cents per pound.

MEXICAN AGREEMENT

1943: Cattle weighing between 400 and 700 pounds reduced from 2½ to 1½ cents.

CUBAN AGREEMENT

1942: Dressed beef reduced from original preferential rate of 4⅘10 to 3 cents per pound. (This reduction does not apply to other countries.)

ARGENTINA TRADE AGREEMENT

1941: Canned beef reduced from 6 cents per pound to 3 cents per pound.
Hides reduced from 10 percent to 5 percent ad valorem.
Tallow reduced from ½ cent per pound to ¼ cent per pound.

You will note from the above that the cattle industry in this country is at a peak in numbers and that beef production is expanded to a wartime basis and that under the existing trade agreements law the full 50 percent cut in tariff has already been made on most of the important items affecting the cattle industry; that further reduction of the tariff as proposed in the pending bill would leave only a semblance of tariff protection for this great industry. It should not be forgotten that considerably more than half of the land acreage in this country grows grass and that much of this area cannot be used for any other purpose.

That use of the power to cut tariffs has not been limited to items where existing rates were a barrier to imports is clearly evidenced in practically all of the above items. Cattle imports have moved into this country freely from Canada and Mexico under the rates prescribed in the original Hawley-Smoot Tariff Act. Dressed beef has come in considerable quantity from Cuba in recent years and it is now indicated that Canada, having expanded its processing facilities during the war, will seek also a reduction in the tariff on dressed beef in order to send part of its exports to this country in that fashion.

Our imports of canned beef from South America prior to the war ran around 80,000,000 pounds per year—some years higher than that. About the time the war began, when the Army made its first purchases of South American canned beef, it was found that they could undersell the domestic product close to 15 cents per pound. The cut in the tariff from 6 to 3 cents was entirely gratuitous.

On hides the original 10 percent ad valorem was a nominal tariff and certainly by no stretch of the imagination could be considered a bar to importations. Records show large importations annually from South America and other countries. There was no excuse whatsoever for the reduction in the tariff on this item.

It is our fear that further cuts in the tariff made at request of foreign interests without regard to the effect on American cattle producers can bring disaster to this industry when the war is over and we have to return to a basis of only domestic consumption. We have had no export trade in beef for more than a generation except during the two war periods. The possible heavy imports of cattle, dressed beef and canned beef from Canada, Mexico, Cuba, and South America with cattle numbers expanding particularly in Canada and Mexico constitute a major threat to our industry, and there should be no further reduction in the tariff. The only way to prevent it is to strike that provision from the pending tariff bill.

Respectfully submitted.

AMERICAN NATIONAL LIVESTOCK ASSOCIATION,
By F. E. MOLLIN, *Executive Secretary.*
DENVER, COLO, *May 18, 1945.*

A Debt, Not a Donation

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. VOORHIS of California. Mr. Speaker, on May 14, 1945, I introduced House Joint Resolution 192, the text of which follows:

Resolved, etc., That all monetary benefits awarded veterans of the wars of the United States, and/or their dependents, by the Congress of the United States, on account of physical or mental disabilities incurred by said veterans in defense of their country, are hereby declared to be both in law and in fact, a partial repayment of a debt owed by the Nation to such veterans and/or their dependents.

That the common-law doctrine holding such awards to be, as a matter of law, a gratuity, is hereby abrogated and annulled.

The background and reasons for the introduction of this measure are set forth so well in the following article written by Capt. A. A. Roe and published in the Arcadia Bulletin, of Arcadia, Calif., on May 21, 1945, that I am simply going to ask consent to include that article with my remarks here concerning my joint resolution:

VETERANS DESERVE MORE THAN JUST A GRATUITY, SAYS ROE

(By Capt. A. A. Roe, a veteran of three wars)

Oh, yes; the Congress from time to time has granted war veterans and their dependents monetary and other benefits in recognition of their service and sacrifices in defense of our common country; but here is where the rub comes: Under an old common-law doctrine it is held that such benefits granted by the Congress are a gratuity, and as such are not enforceable as a matter of law. Hence veteran claims cannot be brought into a court of equity for adjudication.

This is why it was necessary to create a special agency, something distinct and independent of courts of equity, for the adjudication of veterans' claims under the acts of Congress. This agency is now known as the Veterans' Administration; it is a sort of court beyond the pale and power of our democratic system of jurisprudence. Its like cannot be found in any other democratic country in the world.

Through the years we have proceeded under this old common-law doctrine, a relic of a barbaric age, in the matter of veteran benefits, which holds that all such benefits are a gratuity. What is a gratuity? Look at Webster. He says: "A gratuity is something given without any equivalent or recompense, or without claim or merit, being without reason, cause, or proof; a free gift; a present; a donation." In other words, under this doctrine the people and their Government owe the human wreckage of war nothing, as a matter of law.

One wonders how many patriotic citizens and members of our fighting forces, and their families, would agree to this definition of veteran benefits? Do we owe these men now coming back to us from the battlefields of the world, maimed and wounded in body and mind, a debt or a donation? You, Mr. and Mrs. America, must answer that question now.

The President, most citizens, and this writer is of the opinion that there is no debt

contracted by this Government more binding and sacred than the debt we, as a people, owe these veterans. This debt of all debts should be made enforceable in a court of equity, organized in accordance with due process of law.

Is it any wonder that, under the present system, veteran claims are adjudicated on the basis of favor instead of justice under law? That this evil theory of gratuity permeates every department of the Veterans' Administration? It is reflected, of necessity, in the attitude of investigators, examiners, adjudication officers, and rating boards toward veteran claims filed under the acts of Congress; it is the established policy.

No catch-all legislation, no GI bill, no new veteran organization, no change in the personnel of the Veterans' Administration, will remedy a condition that has forced thousands of disabled veterans and their loved ones into poverty and privation throughout the years. This false and inhuman doctrine and policy must be banished and wiped out before we can even talk intelligently of the so-called veteran problem.

The evils growing out of the existing policy are far reaching in their various ramifications and too numerous to be gone into here; it is safe to say, however, that 90 percent of the wrongs complained of by disabled veterans will be found to have their roots buried deep in that one word, gratuity. It should be distinctly understood that the Veterans' Administration, as such, cannot be held in any way responsible for the application of the common-law doctrine being applied to veteran claims.

At a conference between Congressman VOORHIS and national, State, and local representatives of the Disabled American Veterans, reported in these columns last month, this was one of the subjects discussed, and as a result on April 23, 1945, House Resolution 192 was introduced in the House and referred to the Committee on World War Legislation. Those interested in the welfare of disabled veterans may communicate with JERRY VOORHIS, Congressman, 501 House Office Building, Washington, D. C., or Millard W. Rice, national service director, Disabled American Veterans, Inc., 543 Munsey Building, Washington 4, D. C., for such information as may be desired upon this subject.

You may be sure that the returning soldiers from this war will repel with scorn any implication that he wishes, desires, or will accept charity, gratuity, or donations in any form. As upstanding fighting men they will demand justice. He who would accept less is a fool; he who seeks more is a knave.

Proposed Fair Employment Practice Act

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 1 (legislative day of Thursday, May 31), 1945

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very splendid editorial written by Mr. Robert L. Thompson, editor of the High Point Enterprise, High Point, N. C., May 25, 1945, in which he discusses sensibly and dispassionately the so-called Fair Employment Practice Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS A FRIEND OF THE NEGRO RACE

There is no newspaper, no public official, no sociologist, no individual of either race who is more anxious to see an improvement in the relations between the white and colored races than is the Enterprise.

There is none more anxious to see an improvement in the economic status of the Negro.

And there have been very few who were quicker to point out and to oppose incidents of injustice to the Negro race—incidents which we all know occur frequently but nevertheless, much less frequently than was once the case.

Our attitude is not based on charity. Rather it is based on the conviction that no country, no section, no community can achieve real prosperity as long as a large proportion of its population is ignorant, poverty-stricken, and the victim of economic discrimination.

Likewise no country, section or community can progress far unless its progress is based on fair play—fair play upon the part of both the majority and the minority.

It is for these reasons, and speaking as a friend to the Negro race, that the Enterprise is unalterably opposed to the bill now before the Congress which is miscalled the fair employment practice act.

We know of nothing which would do more to cause inter-racial strife, and to retard the progress the Negro race has been making for the last 80 years, than this proposed law. Truly it is an abortive brain child, begot by the passionately impractical do-gooders, conceived by politicians avidly seeking the Negro vote, and nursed by the totalitarian bureaucrats who never miss an opportunity to increase the power of government over the lives of men.

The effect of this proposed law would be to tell an employer that he must employ a certain number of Negroes for whatever type of work the bureaucrats said they were qualified to do, regardless of the situation within the plant or organization, regardless of the attitude of the other workers, regardless of the desires of the management.

Carried to its logical conclusion the passage of this law would mean that a certain percentage—approximately 10 percent—of the workers in every department of every plant, the conductors on railroad trains, the tellers in banks, the clerks in hotels, the stenographers in offices, the mechanics in garages, and every other type of worker on every other kind of job, would have to be Negroes. Just so long as they applied for a job, and the bureaucrats said they were qualified to do the work, the employer would be forced to hire them or close down.

We agree with the statement made by Senator CLYDE R. HOEY the other day that this proposed law is contrary to the Constitution of the United States. That Constitution protects the rights of an employer to pick the people whom he wants to work for him, just as it protects the worker from being forced to work where he does not want to work. But there is always the possibility that the courts will interpret the Constitution either way. So let us assume that such a law is passed and is upheld? Then what?

Can you imagine anything which would do more to create strife, strikes, economic chaos, and actual riots?

Can you imagine anything which would do more to retard the advance of the Negroes than such strife?

How long will it take us to learn we cannot settle such problems by the mere passing of a law?

We all know that there is a scarcity of certain types of work for Negroes. One reason may be racial friction. But a much more important reason is the fact that there is a scarcity of Negroes trained for all types of work, a scarcity of Negro capital, a scarcity of Negro management. And these things take years upon years to work out. First must come education—and we are making great strides in that direction. Second comes the birth of initiative on the part of the rising race—and the Negroes are making great strides in that direction. But anyone who has ever read history, anyone who has ever observed his fellowman, should know that this whole racial problem is not to be solved by the mere passing of a law—especially a law which could not be enforced and which would stir up strife throughout the Nation. The Detroit riots would be as nothing to what would follow the passage of this bill, in our carefully considered opinion.

We are wholeheartedly in favor of improving the economic status of the American Negro. We look forward to the time when capital—far-sighted white capital as well as Negro capital—erects plants for colored workers and pays them equal wages for equal work. We look forward to the time when these plants develop their own management. We look forward to the time when the improved earning power of Negroes results in a great increase in Negro capital. We look forward to the time when the white and colored races develop an ever-increasing respect for each other—and for each other's rights.

But we will never see such a day as long as the approach to it is attempted by any such fool law as the Fair Employment Practice Act—a law which attempts to increase the opportunity of the minority by depriving members of the majority of their constitutional rights and freedom; a law which would turn the great majority against the 10 percent minority just at a time when relations were becoming better; a law which would backfire and cause the Negroes of America, the greatly outnumbered colored men and women, the greatest setback since they began their wonderful progress upward from slavery, only 80 years ago.

Chicago Municipal Transportation System—Attitude of Judge Michael L. Igoe

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, June 1 (legislative day of Thursday, May 31), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Sun Inquiry Shows Friends of Judge Igoe in Fat Car Line Posts," published in the Chicago Sun of May 30, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUN INQUIRY SHOWS FRIENDS OF JUDGE IGOE IN FAT CAR LINE POSTS

(By J. M. Klein)

Most important hurdle to be cleared to give Chicago a publicly owned unified transportation system is the attitude of Judge Michael L. Igoe, of United States district court.

Next Monday the people of Chicago, longtime sufferers from the antiquated, high-priced transit service which has accompanied court receiverships of the privately owned lines, will vote on the question of adopting the city-State plan for public ownership.

Two days later a report is due from the Illinois Commerce Commission on the city's plan for purchase of the transit properties.

But Judge Igoe, because of his judicial authority over the traction litigation, is in a position to veto the program, even though the people vote for it and the State commission gives approval.

In view of this situation, the Chicago Sun has inquired into the prolonged control of the Federal district court over the traction properties, particularly the streetcar lines, which have been longest in litigation.

FACTS DISCLOSED IN INQUIRY

Information obtained by the Sun reveals:

1. The manner in which the traction lawsuits, dating back to December 1926, were transferred, with other big receivership and bankruptcy cases, from Judge James H. Wilkerson (now retired), in the United States district court to Judge Igoe, who still wields judicial authority over them.

2. An unsuccessful effort by other United States district court judges to censure Igoe and Wilkerson in connection with the lawsuit transfers.

3. Selection of friends of Igoe and Wilkerson for important jobs in the management of the Chicago Surface Lines, either by court appointment or employment by the management.

4. Appointment of five separate legal staffs, employing at least 37 lawyers to handle legal matters for the trolley lines or trustees of the streetcar properties.

5. A heavy increase in general office personnel of the surface lines at the same time the company was losing large numbers of conductors, motormen and other operating employees.

(Representatives of the Sun had made an appointment with Judge Igoe for yesterday afternoon, with the view of getting Judge Igoe's comment on the matters discussed in this article. However, Judge Igoe later sent word that he could not keep the appointment because of other business and that he would be unable to see the Sun's representative before tomorrow.)

The public ownership plan coming before the voters Monday would terminate the costly litigation tying up the surface lines and the elevated lines of the Chicago Rapid Transit Co.

The surface lines, composed of two separate streetcar systems, were in receivership for nearly 13 years until Judge Igoe placed them in bankruptcy last fall.

FOUR MILLION NINE HUNDRED THOUSAND DOLLARS IN EXPENSES

Receivership fees and related expenses have taken more than $4,000,000 out of streetcar fares. The elevated lines have been in bankruptcy since 1937, after 5 years of receivership. Expenses in this case total over $900,000.

Judge Igoe has had jurisdiction of the traction cases since March 27, 1940, when he inherited them from Judge Wilkerson.

Court records show the transit litigation was transferred on that date from Wilkerson to Igoe by orders signed by the executive committee of the United States District Court, then composed of Judges Igoe, Wilkerson, and the late Charles E. Woodward.

FRICTION OVER FEES

This action, together with later transfers from Wilkerson to Igoe of other important cases involving large fee allowances, had a disturbing effect on some of their colleagues, the Sun has been informed, and subsequently led to friction.

The matter came to a head at a stormy meeting of the Federal district judges in February 1941, when a resolution of censure against Igoe and Wilkerson was considered, according to unimpeachable information, Wilkerson had retired from the bench a few weeks before.

BARNES PROPOSES CENSURE

The censure resolution was proposed by Judge John P. Barnes and was seconded by Judge William J. Campbell. After some debate it was defeated by a vote of 4 to 2. The votes against the resolution were cast by Judges Igoe, Woodward, Philip L. Sullivan, and William H. Holly.

This incident, hitherto unrevealed, is recorded in the minutes of the meeting. (Minutes of the judges' meetings are not public records.)

Reasons for the censure proposal have not been divulged.

RECORDS SHOW CASE TRANSFERS

According to court records, a number of transfers from Judge Wilkerson to Judge Igoe were made in August 1940, on orders signed only by them. These transfers included big bankruptcy cases involving a hotel company and the Chicago, Milwaukee, St. Paul & Pacific Railroad Co.

In November 1940, after a new executive committee of judges began to function, Judge Wilkerson sent the committee several other important cases from his calendar "for reassignment to Judge Igoe." The executive committee, composed at this time of Judges Wilkerson, Holly, and Sullivan, transferred the cases accordingly.

CONGRESSMEN REPROVE JUDGE

A congressional committee investigating Federal court receiverships and bankruptcy matters in Chicago in 1934 sharply censured Judge Wilkerson, in a report to the House Judiciary Committee, in connection with his fee allowances in the traction case and other receiverships.

Later a final report, of the inquiry group, in April 1935, recommended that no further steps be taken toward impeachment of Wilkerson and two other judges involved in the inquiry, but said that "it appeared that there existed favoritism in the appointment of receivers, attorneys, referees, and allowances of excessive fees."

In December 1937, President Truman, then United States Senator from Missouri, referred to Judge Wilkerson in a Senate speech as "the most notorious receivership judge on the Federal bench." Senator Truman specifically criticized Wilkerson's fee allowances in the Chicago, Milwaukee, St. Paul & Pacific Railroad case, one of the cases subsequently transferred from Judge Wilkerson to Judge Igoe.

JUDGE IGOE TAKES OVER

Judge Igoe actually assumed jurisdiction of the traction cases a week before their formal reassignment to his calendar; he called into court all parties in the proceedings and asked for a report on progress of negotiations for unification of the streetcar and elevated lines. His entry into the case came as a surprise to the traction litigants.

Later, Judge Igoe explained he was handling the traction matter to permit Judge Wilkerson to give full attention to an important criminal case, and said he would retain jurisdiction of the traction case "until Judge Wilkerson asks for its return."

RETAINS PERMANENT CONTROL

However, Judge Igoe retained permanent control of the transit litigation. Wilkerson left the bench January 1, 1941, and went into private law practice.

Igoe and Wilkerson have been warm friends for many years, although belonging to different political faiths. Igoe is a Democrat and Wilkerson a Republican.

In 1932, when Wilkerson was nominated by President Hoover for promotion from the Federal district bench to judge of the United States circuit court of appeals, Igoe, then Democratic national committeeman from Illinois, supported the nomination, which provoked a storm of protest from labor spokesmen. The nomination died in the Senate Judiciary Committee.

WILKERSON WELCOMES IGOE

When Igoe was inducted as Federal judge in November 1938 in a public ceremony, in Judge Wilkerson's courtroom, Wilkerson, in a welcoming address, recalled that when he was United States district attorney (1911–14), Igoe was one of his assistants. Igoe was appointed special assistant to Wilkerson in November 1913.

Igoe has put in force a series of changes in the operating control of the Chicago surface lines since he has had jurisdiction.

Control of the surface lines, comprising two separate streetcar systems, now is vested in a joint board of management and operation created by Judge Igoe. One of the five board members selected by him has had any previous traction experience.

THREE FRIENDS OF JUDGE

They were appointed in the most recent shake-up last September 18, when Judge Igoe, over protests of some litigants, took the surface lines out of receivership and threw them into bankruptcy.

At least three of the five board members are known to be intimates of Judge Igoe.

There are indications that personal or political associations may be linked with the appointments of some of the men at the head of the surface lines and with the employment of some of their aids.

It is a matter of record, although no public mention has been made of the fact until now, that Judge Igoe has put a former law partner into the lucrative job of general counsel for the surface lines, said to pay $25,000 a year.

JOBS TO WILKERSON ASSOCIATES

While putting his own appointees in charge of the streetcar system, Judge Igoe awarded fee-paying jobs to two friends and law-office associates of Judge Wilkerson, William J. Froelich and Jacob I. Grossman, who previously had served in the transit case under Wilkerson.

Froelich and Grossman serve jointly, by Igoe's appointment as counsel for the joint board of management and operation of the surface lines. Each was awarded by Igoe a fee allowance, "on account," of $1,000 a month, effective since March 1, 1941.

Previously Froelich had served in the case, by order of Judge Wilkerson, as counsel to the court's traction adviser, receiving fees of $59,000 from 1938 through 1940. Grossman was special master for Judge Wilkerson in a minor phase of the traction proceedings, getting $3,000 for such service in 1938.

Judge Igoe recently appointed Grossman as court representative to participate in traction reorganization proceedings, in addition to his other duties. The new appointment did not fix any additional pay.

After Judge Wilkerson's retirement from the bench, January 1, 1941, he and Froelich and Grossman announced their association in the private practice of law at 231 South La Salle Street, where they still maintain offices together.

Grossman was Wilkerson's secretary when the latter was chairman of the Illinois Public Utilities Commission (predecessor of the Illinois Commerce Commission), and later was Wilkerson's master in chancery while he was on the Federal bench.

Judge Igoe's top man in the surface lines management is John E. Sullivan, a close friend and political associate.

Sullivan was made chairman of the present joint board of management and operation when Judge Igoe put the surface lines into bankruptcy last September.

At the same time Sullivan became president of the surface lines, an office that had been vacant since the death of Charles W. Chase in May 1942.

Sullivan has refused to divulge his salary but it is understood to be substantially lower than Chase's salary of $50,000 a year.

A former banker and State bank examiner, Sullivan was hired by the surface lines management as chief financial officer and treasurer in April 1941, about a year after Judge Igoe assumed jurisdiction of the traction case. He succeeded the late M. B. Orde.

In 1943 Sullivan became vice president of the surface lines, a post previously vacant, and also retained the title and duties of treasurer.

ADHERENTS OF O'CONNELL

Both Sullivan and Igoe were political adherents of the late William L. O'Connell, Democratic leader, who was general receiver for closed banks in Illinois under the State auditor until his death in July 1936.

Sullivan served under O'Connell as receiver for the Garfield State Bank.

Before Igoe left private law practice to become United States district attorney in June 1935, he and his law partner, William J. Flaherty—the partnership name was Igoe & Flaherty—served O'Connell as counsel for the State receiver of six banks.

Flaherty continued as receiver's counsel in the bank cases after Igoe withdrew from the firm, according to State records.

In addition to Chairman Sullivan, the joint board of management and operation of the streetcar system includes these four Igoe appointed bankruptcy trustees of the companies constituting the surface lines:

Edward J. Fleming and Charles H. Albers, trustees of the Chicago City Railway Co. and the Calumet & South Chicago Railway Co. (South Side lines).

Thomas J. Friel and Charles C. Renshaw, trustees of the Chicago Railways Co. (north and west side lines).

Fleming and Albers served as receivers of the south side lines by appointment of Judge Igoe before the surface lines were thrown into bankruptcy. Friel and Renshaw were brought into the traction case for the first time by Judge Igoe when he issued the bankruptcy order last fall.

Fleming and Friel, like Sullivan, are numbered among Igoe's intimate friends.

FLEMING COAL EXECUTIVE

Fleming is a business executive, president of the Fleming Coal Co. He was appointed by Judge Wilkerson as receiver for the Congress Hotel in April 1938, serving until the hotel was sold in January 1941. Two months later Judge Igoe made him a traction receiver.

Friel is a grain trader, operating as a broker for his own account on the Chicago Board of Trade.

Albers was assistant to "Billy" O'Connell when the later was general receiver for closed banks in Illinois. He succeeded O'Connell in this post when O'Connell died in 1936, resigning in March 1941. Soon afterward Albers was given a receivership in surface lines by Judge Igoe.

Renshaw has been an investment broker on La Salle Street for more than 35 years and is a partner in the firm of Mitchell, Hutchins & Co.

On his appointment as a bankruptcy trustee in the Surface Lines case, Renshaw filed an affidavit declaring that neither he nor his firm has any interest in securities of the Chicago streetcar lines, although his firm has handled such securities for clients.

NO BANKRUPTCY FEES YET

Thus far there have been no fee allowances for the bankruptcy trustees of the surface lines. Prior to the bankruptcy order, Judge Igoe allowed the receivers $15,000 a year each.

Judge Igoe's former law partner, Flaherty, has been general counsel of the surface lines since December 1941. A formal order was signed by Judge Igoe at that time approving Flaherty's appointment by the Surface Lines' management in place of John R. Guilliams, the former general counsel.

It was announced Guilliams had resigned because of illness. Guilliams, who was retired on a pension, had been getting $25,000 a year.

Another important replacement in the top personnel of the surface lines since Judge Igoe became judicial overseer was the appointment of Charles A. Burns, former banker and associate of Sullivan, as comptroller in February 1944. He replaced Charles H. Allen, veteran financial officer who retired on a pension.

ADVANCED TO TREASURER

Burns was moved up to treasurer last December in place of Sullivan after the latter became chairman of the management board. Burns and Sullivan had been associated some years before as vice presidents of the old Foreman-State National Bank.

Burns first joined the surface lines in August 1941, as auditor for the receivers of the South Side lines.

Under Wilkerson's jurisdiction of the traction case, the late Charles M. Bates, a Wilkerson protégé and former clerk of the United States district court, was employed by the surface lines in February 1935, as assistant secretary. Bates was retained on the surface lines pay roll after the traction case was transferred from Wilkerson to Igoe, until his death last September

It may be of interest to Chicago's streetcar riders, whose fares pay all the bills, that 37 different lawyers are employed to handle various legal matters for the Chicago surface lines, the trustees of the streetcar systems comprising the surface lines and the joint board of management and operation of the surface lines.

SET-UP OF LEGAL STAFF

The surface lines have a general legal staff headed by Flaherty, the former law partner of Judge Igoe.

Two other lawyers, David R. Watson and Thomas E. Strachan, Jr., serve as assistant counsel under Flaherty, according to a report filed with Judge Igoe in January.

The surface lines also have a personal-injury law department headed by Frank L. Kriete and employing 27 other lawyers. Nine of Kriete's lawyer aides are on a regular salary while the other 18 are trial lawyers employed on a per diem basis, the management board reported. The pay roll for this department has not been disclosed.

The board of management and operation has two lawyers appointed by Judge Igoe. They are Froelich and Grossman.

OTHER LAWYERS EMPLOYED

Members of the management board include the two bankruptcy trustees of the south side lines and the two trustees of the north and west side lines. In addition to the attorneys for the management board, a separate lawyer serves each set of trustees.

Charles Aaron, appointed by Judge Igoe in 1941, is counsel for the trustees of the south side lines. He has been paid at the rate of $15,000 a year.

Weymouth Kirkland of Kirkland, Fleming, Green, Martin & Ellis, is attorney for the receivers of the north and west side lines under a fee allowance of $15,000 a year. He was appointed originally by Judge Wilkerson in 1927 at the start of the traction litigation and was retained by Judge Igoe.

TWO TAX ATTORNEYS HIRED

Recently, on January 26, Judge Igoe authorized the trustees and the management board to employ two other lawyers, David L. Bazelon and Leo J. Schwartz, as special counsel to handle Federal tax matters.

Bazelon served under Igoe as an assistant United States district attorney during Igoe's tenure as Federal district attorney here (1935–38) and remained in that office as chief of the civil tax litigation division until February 29, 1940.

Both Bazelon and Schwartz are members of the law firm of Gottlieb & Schwartz, counsel for first mortgage bondholders of the south side streetcar lines.

In addition to the large array of lawyers, the Chicago Sun has found a curiously heavy increase in the surface lines staff of general office clerks since 1942 in the face of a large loss of operating personnel, such as conductors, motormen, and maintenance men.

This is revealed by sworn reports filed annually by the surface lines with the Illinois Commerce Commission.

MANY OPERATORS LOST

The reports show that from January 31, 1943, to January 31, 1945, the surface lines staff of transportation and maintenance employees declined about 10 percent because of the wartime manpower shortage. This loss included 1,277 conductors, motormen, and trainmen; 175 track and roadway workers; 69 carhouse employees, and 44 shopmen.

Yet during the same period, the number of general office clerks rose from 435 to 547, an increase of 25 percent. And the total pay roll for this group of employees jumped 42 percent, from $345,169 to $1,205,123.

Sullivan gave this explanation: The general office force had to be enlarged since 1942 because of additional clerical work entailed by increased war savings activities, pay roll withholding tax records, adoption of a half-fare rate for students, installation of a new biweekly pay-roll system, and various other innovations in the last 3 years.

Were new jobs created for patronage purposes or other questionable reasons? Positively not, said Sullivan.

"No one has been put on our pay roll for any reason except to fill a necessary job," Sullivan declared, "Our pay roll records are clean and will stand the most searching scrutiny."

However, Sullivan refused, on advice of counsel, to furnish pay roll lists requested by the Chicago Sun for the purpose of ascertaining specific changes and additions in personnel.

OTHER LINES' INCREASE LOW

In comparison with the 25-percent increase in the number of general office clerks in the surface lines since 1942, the Philadelphia transit system reported a rise of 8 percent in the number of such employees during the same period, the Detroit street railways, an increase of 10 percent, and the Boston elevated lines an increase of 13 percent.

The surface lines' reports to the Illinois Commerce Commission also disclose a 66 percent increase since 1942 in annual expenditures for "pensions and gratuities."

This item, listed as an operating expense, was reported at $661,525 for the year ended January 31, 1943, and $1,096,018 for the year ended January 31, 1945.

Sullivan explained that during this period the retirement pension plan for surface lines' employees was supplemented by other benefits, including group life insurance, accident, and health insurance, hospitalization, and full pay for sick leave up to 7 days.

The new benefits added to the normal increase in retirement pensions, account for the 66 percent jump in the "pensions and gratuities" expense since 1942, Sullivan said.

As in the case of the pay-roll lists, Sullivan refused to furnish any pension lists or other details about this expense, except the total number of pensioned employees. He gave figures showing the number of pensioners rose from 769 to 1,080 from January 31, 1943, to January 31, 1945, an increase of 40 percent.

OFFICERS PAY OF 9 PERCENT

Salary scales of general officers of the Surface Lines have been boosted an average of 9 percent since 1942, according to the reports filed with the Illinois Commerce Commission.

The last three reports showed:

January 31, 1943: Total pay roll of $294,886 for 23 officers, an average salary of $12,821.

January 31, 1944: Total pay roll of $307,009 for 25 officers, an average salary of $12,280.

January 31, 1945: Total pay roll of $363,328 for 26 officers, an average salary of $13,973.

Individual salaries are not listed.

It may be significant that between the last two reports, one general officer was added, while the total salaries rose $56,319. It was during this period that the office of president, previously vacant, was given to Sullivan, who had been vice president and treasurer.

International Peace Conference Planning Should Embrace Education Office; R. M. Davis Makes Contribution to Youth Participation

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. RANDOLPH. Mr. Speaker, it is imperative that our world security plans incorporate, within the pattern of peace, the provision for an international program of education. In this connection, it is gratifying to recognize the appropriate action which Congress has recently taken in the passage of legislation which urges the participation of our country in the creation of an international educational and cultural organization.

In reference to the House measure sponsored by Representative MUNDT, I include at this point, copies of correspondence between Dr. W. W. Trent, State superintendent of free schools, Charleston, W. Va., and myself, and also with Mr. Phares E. Reeder, executive secretary, State Education Association, Charleston:

MAY 18, 1945.

House Resolution 215, which in substance "urges participation by the Government of the United States in the organization of an International Office of Education * * *: *Provided, however,* That such agency shall not interfere with educational systems or programs within the several nations or their administrations," is now before the House Foreign Affairs Committee. Possibly by the time you receive this letter, the Foreign Affairs Committee will have completed its hearing on this resolution.

It is the honest and sincere belief of educators throughout the Nation that such an International Office of Education should be established. In West Virginia, during the past 2 years or more, we have held regional leadership conferences and other educational meetings in which we have discussed the general topic Education and People's Peace. Furthermore, we have sent before numerous parent-teacher organizations and civic clubs' speakers who have discussed this all-important topic. Within these discussions we have attempted to emphasize the importance of the establishment of an International Office of Education. Educators in West Virginia and many forward-looking lay citizens believe that such a step will go a long way toward effectuating a permanent peace.

Because of developments at the San Francisco Conference, it is believed that an immediate passage of House Resolution 215 will have constructive influence upon the development of Conference opinion favorable to the creation of an International Office of Education in the peace structure of the postwar era. If passage is to be effected, it will call for quick House action.

In behalf of the West Virginia teachers who so ardently have been interested in education as an aid for developing a lasting peace, I not only solicit your support of House Resolution 215 but urge that you use your influence in getting it brought to the floor of the House. I have wired Congressman KEE, who is a member of the Foreign Affairs Committee, regard this matter.

Thanking you for your cooperation and extending to you my best wishes, I remain,

Sincerely yours,

PHARES E. REEDER,
Executive Secretary.

[Telegram]

MAY 18, 1945.

Request your support for House Resolution 215, which urges participation by the United States in an International Office of Education with certain safeguards for the educational system of the several nations. I believe that such office can make a definite contribution to world peace.

W. W. TRENT,
State Superintendent of Free Schools, Charleston, W. Va.

My reply, in both these instances, follows:

MAY 23, 1945.

I appreciate your communication in reference to House Resolution 215. I am strongly in favor of the purposes of this legislation, and I feel that such an office would be helpful in the cause of an enduring world peace. Education must play an important roll in the postwar world. Any international organization which is formulated must, in my opinion, include the establishment of an International Office of Education.

Barriers that have kept the nations apart culturally can eventually be lowered or erased by the activity of such a unit within the framework of our peace building.

One of the principal reasons for my intense interest in this subject is because of the successful program which has brought a ready response from the youth of Monongalia County, which section, as a part of the Second West Virginia District, I have the responsibility to represent. R. M. Davis, of Morgantown, sponsored, earlier this year, an essay contest which was participated in by more than three hundred high-school students. This businessman, who is a courageous and far-visioned citizen, arranged a visit for the contest winners to Washington, D. C. They came to the National Capital April 2, 1945, and on the afternoon of that day I briefly addressed my colleagues, and called attention to their presence, in the following words:

Mr. Speaker, our citizens, regardless of party or creed or color, are intensely interested in seeing to it that when victory comes, which we hope will be soon in all theaters of war, there will be written a permanent peace. Two young people, Pauline Pyles and Tony Pataki, from my congressional district, are in Washington today. First prize winner, Darla Lou Eddy, was unable because of an injury to make the trip. They have won awards for the writing of clear-cut essays on the subject of a constitution for the United Nations. They are here as the guests of a splendid citizen of my district. I call him a rank-and-file citizen, a coal operator, R. M. Davis, of Morgantown, who is a pioneer in working for a permanent peace of the world. I believe their visit to our National Capital, and the recognition we give to these students, is something which will be embraced by the American people as symbolic of our earnest desire that peace must be nurtured in the hearts and minds of the youth of our land.

Their subjects were woven about the need for a Constitution for a United Nations Government.

There is noteworthy of quotation from that document, published on January 15, 1945, a provision in which Mr. Davis proposed, among other articles, an Office for Peace Education, in the following words:

OFFICE OF PEACE EDUCATION

1. While the United Nations government must be effectively prepared to fight to preserve the peace of the world it should also do everything within its power to remove all obstacles to a lasting peace. One of the greatest obstacles to such a peace is ignorance of international affairs. In recognition of this fact there shall be created by the executive council an International Office of Peace Education, to be presided over by a secretary of peace education, which shall develop an international-peace program to be carried to the four corners of the earth. In order to prevent overlapping and duplication of activities, cooperation shall be extended to the authorities of member nations in formulating an educational program to be carried on in the school systems of the member nations.

At this point, I include the following explanatory letter:

MORGANTOWN, W. VA., *April 11, 1945.*

DR. JOHN W. STUDEBAKER,
United States Commissioner of Education, Washington, D. C.

DEAR DR. STUDEBAKER: I want you to know how happy I was to see you the other night at the dinner given by Congressman RANDOLPH for the winners of the essay contest on the Constitution for an International Government. I have reflected upon this meeting several times since my return to Morgantown, and have been wondering how we might get an expression of the boys and girls of America on the kind of an international government that they desire. If the boys and girls in the high schools of this country could express themselves in essays on the kind of government that the world should have following the present conflict, I believe it would do a tremendous amount of good.

The more I think about it, the more I am convinced that Mr. R. M. Davis is on the right track, and that the boys and girls now in high school will be the men and women most vitally concerned with the problems of the postwar era. If a just and lasting peace, supported by a world organization of peace-loving nations is not provided, then we are doomed to a series of recurrent world wars.

It seems to me that the office of education would be the logical agency to stimulate the young people in the high schools to do the same type of thing that we have done here in Monongalia County. If you would address a letter to the different State superintendents of schools telling them what we have done in Monongalia County, they might be stimulated to do the same thing in the high schools under their supervision. Mr. Davis will be very happy to send 100 copies of his Constitution for a United Nations Government as an example of a concrete plan for stimulating original thinking on the part of the State superintendents as well as the boys and girls

in the high schools of the Nation. I shall appreciate having your reaction to this general idea.

Again assuring you that it was a pleasure to see you again, I am

Cordially yours,

FLOYD B. COX,
Superintendent,
Monongalia County Schools.

I agree with Mr. Cox, and I hope that the time will soon come when other individuals will do what Mr. Davis has done, because I believe that students throughout America would welcome the opportunity to participate in these essay contests. Dr. Studebaker at the dinner had indicated we should have contests in the 3,000 counties of the country.

I believe it worth while to quote from the essays of the first, second, and third prize winners respectively.

First prize winner, Miss Eddy:

Education must not alone be national but universal. The fundamental precepts of the common brotherhood of man must be set forth in our textbooks. The world must be educated for peace even as the Axis nations have been educated for greed, for egotism, for war.

The whole world needs a spiritual awakening. We must have spiritual security before we can have material security. We must have faith in men and must realize that the only foundation upon which a peaceful world can ever exist is in the ideas which we know as the golden rule and the brotherhood of man. These have been the basis of our own civilization. They are spread by teaching in the home, school, church, and community, and by example. If we would spend only 1 percent of what we spend on war to spread these ideals among mankind, the world would astonish us with its progress toward intellectual and moral unity which alone can give meaning and power to constitutions, councils, assemblies, and courts.

We must have faith in the future, and not exaggerate our fears and difficulties. Our problems can be solved by intelligence and good will. We have a better opportunity than any generation has ever had. We can have a decent and peaceful world, but we must act and act now

Second prize winner, Mr. Pataki:

To create a just and lasting peace it is necessary to set up an international organization to promote justice and to preserve peace.

Peace leads to international cooperation, understanding, and justice. War serves only to create distrust, suspicion, destruction, increased taxes, uncertainty, moral decay, and great sacrifice. It interrupts peace projects and leads to more war. The most fundamental antidote for war is the philosophy of love. In the church we are to love our neighbors and enemies. God taught us to overcome evil with good. Men and nations must obey the moral law which comes from God.

Third prize winner, Miss Pyles:

The most difficult political task in the world's history will rest upon the men who will build the peace which must follow World War II. I say must because I feel that if another war is to follow this one civilization will be completely wiped out. We must realize that our degree of civilization (while being highly advanced) makes it possible for whole cities to be literally demolished by a few bombs. If another war follows this one, innocent people far from the scene of battle will be killed by the new robot bomb. We cannot have another war! This new peace must be a lasting one! It is up to the youth of this country to see that the peace is carried out (putting it on a purely selfish basis) for our own good. A world peace plan must be drawn up which will be democratic, excluding no nation, race, or color.

It is up to us to use to the fullest extent our natural resources for the good of the people of the world. Nothing is gained by war but death, misery, backward steps in progress. A peace organization and an enforced peace is necessary simply because people cannot fully comprehend the disadvantages of war. They must be shown the path of peace.

I was first contacted by Mr. Davis early in 1942 in reference to his belief that an international constitutional convention should be held.

In accordance with his ideas, and my desire to cooperate, I introduced in the Seventy-seventh Congress, on July 17, 1942, House Concurrent Resolution 77; in the Seventy-eighth Congress, on January 7, 1943, House Concurrent Resolution 5; and in the Seventy-ninth Congress, on January 3, 1945, House Concurrent Resolution 8. Copy of the measure is herewith presented. It will be noted that the sixteenth point indicates the need for the international delegates to adopt a program of international education and improvement.

House Concurrent Resolution 8

Resolved by the House of Representatives (the Senate concurring), That the Congress respectfully requests the President to invite foreign governments to send representatives to attend an international constitutional convention charged with the duty of drafting a constitution which shall provide—

(1) For an international government;

(2) For participation by all nations desiring so to do;

(3) For an international administrative board consisting of 15 men;

(4) For an international supreme court;

(5) For an international congress consisting of senators from each participating nation;

(6) For free religion;

(7) For free press;

(8) For free speech;

(9) For free assembly;

(10) For retention by all nations of the right to maintain the form of internal government desired by each;

(11) For the abolition of all armaments by all nations; except an international police force under the control of the international government;

(12) For complete control by the international government of all international questions and relationships;

(13) For a program designed to raise the economic condition, living standards, wages, etc., of all people;

(14) For a program of improved international trade relations;

(15) For a program of international social improvement;

(16) For a program of international educational improvement; and

(17) For machinery to amend the constitution when found necessary.

In conclusion, I would like to state that Mr. Davis attended the opening days of the Security Conference in San Francisco. I am informed that he was most helpful in counseling with the representatives who were present. More than 300 copies of his proposed constitution were effectively distributed.

Responsibility of Congress to the City of Washington

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, June 1 (legislative day of Thursday, May 31), 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an able editorial in the Washington Post on the problems of the District of Columbia. The editorial makes a truthful statement when it says that the responsibility for the government for the District of Columbia falls directly upon Congress. I am glad to commend the editorial as being thoroughly sound.

There being no obection, the editorial was ordered to be printed in the RECORD, as follows:

So long as Congress insists on functioning as Washington's city council, it cannot unload the governmental failures on local officials, but what we need more urgently is a genuine local government, of which a department of public welfare would be a part. It is in failing to provide such a government that Congress has been grossly unfair to the District. Local citizens find it impossible to eliminate atrocities because all the power to govern is in the hands of a National Legislature which is too busy to exercise it wisely.

Nor is it to be supposed that Mr. COFFEE and other friends of the District can change the basic situation by appropriating funds for new welfare institutions. Of course, new buildings are needed. But far more than new buildings will be required to give this backward city a modern public-welfare system. Eternal vigilance is the price of successful management, as well as of liberty, and that sort of vigilance in the direction of municipal affairs comes only when officials are directly responsible to the people they serve. Until Congress is ready to apply the American formula of home rule to the District it would be naive to expect anything more than opportunistic patching up of disgraceful conditions.

World Peace Plans Threatened by Failure of Russia and Rest of World To Cooperate

EXTENSION OF REMARKS
OF
HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. THOM. Mr. Speaker, under unanimous consent, I am reprinting herewith the text of remarks I made at Memorial Day exercises held May 30 at Newcomerstown, Ohio, under the auspices of the American Legion and Veterans of Foreign Wars, with Mr. J. W. Robe acting as master of ceremonies:

As Americans observing Memorial Day this year in loving remembrance of soldiers of

past wars, we stand more confident and self-assured of our national strength than we did last Memorial Day. If you will let your minds travel back to Memorial Day of a year ago, you will recall that we were then in great anxiety and concern lest the invasion of the European Continent might meet with failure. We feared that at best we must expect countless casualties from wholesale destruction of troop ships.

None of these fears materialized.

May it come to pass that Japanese resistance we now know to be so intense will break soon, so that our next Memorial Day will see our people freed from the ever-present apprehension that fills every home which has sent a son to the front.

I have never quite outgrown my boyish idea that Memorial Day primarily is in memory of the veterans of the Civil War. The blue-coated Grand Army men were the outstanding personalities of my youthful days. If in those times there was any parading to be done, or a flag to be raised, or a cannon salute to be fired, it fell to their lot. Later, then, in the late nineties, whilst the columns of the Civil War veterans still headed the Memorial Day parade, and easily formed the bulk of the marchers, a new division brought up the rear—the Spanish-American War veterans, whom I saw leave home young, and wild, should I say, for the experiences of war about which the Grand Army men had talked so much to them in school and in public meetings.

This year in most communities everywhere there will be no Civil War veterans to head the parade, for there are now only 240 of them on earth, all of them of an average age of 98 years—what a pitiful remnant left of the army of the blue that numbered over 2,000,000.

In most places, therefore, oldest soldiers in line will be the Spanish-American War veterans, of whom there is now some 129,000 and better. Then will come World War I veterans, commingled, I assume, in most cities with World War II veterans just now streaming home covered with honor and distinction. At the moment, it does not seem that the veterans of the two world wars are to be independently organized, so that we shall almost begin to think of them as belonging to one great conflict between Germany and the world enacted in two episodes 25 years apart.

The Decoration Day processions, therefore, will grow longer and longer, because there will be more veterans than ever in the whole history of the United States—a melancholy sign that proves our deep yearning for the preservation of peace has not to date borne fruit.

If you will indulge my reminiscing a bit longer, may I tell you that in 1924 I was in Berlin, Germany, and there I witnessed the observance by the German people, of memorial day for the German dead of World War I. Fritz Ebert, President of the German Republic, was delivering the memorial address from the Reichstag Building, to which great crowds were repairing that bright Sunday afternoon. What I saw that day persuaded me that perhaps Germany was beginning to realize that her military urgings were futile and disastrous. Many young men were in these Berlin crowds, wearing on their coat lapels a paper streamer imprinted with the words: "Nie Mehr Krieg." Interpreted this means "No more war." To me this was significant, for on this day of national mourning such a slogan, it seemed, might impute blame to the Germany of Emperor William. Yet these young Germans were defiantly asserting themselves in this way.

At the very moment these young Berlin Germans were flaunting their sentiments against war, there was imprisoned in a fortress at Landsberg, Germany, Adolf Hitler, brewing his hateful philosophy which he incorporated in Mein Kampf, that fountainhead of all the malice and hate which finally threw the world into global war. I had then never heard of Hitler, although the Germans themselves knew of him as the wild, radical leader who had tried to upset the Republic by proclaiming a nationalist-socialist revolution in Bavaria in 1923, and had rather ingloriously gone down in defeat. In many eyes, he was looked upon as a mountebank, and an English writer drawing his conclusions evidently from the sentiments of the German people in 1927 wrote about him as follows:

"Hitler, a native of Vienna, had been apprenticed to a house painter, and from being a Socialist was driven by his own violent anti-Semitism into the ranks of the other extreme. He first came to Munich when the war broke out, and he served in the German Army, subsequently acquiring German nationality. Modeling himself on Mussolini in all but political intelligence, he cast himself for the part of a German Gambetta, for which he was totally unequipped. Though combining sincerity with a gift for glib oratory and more than a touch of megalomania, he was a complete stranger to the realities of politics, and seemed lost in a world of fantasy as he delivered his harangues, a mixture of anti-Semitic hatred, pose, and vanity. In his ecstatic visions he saw a dictatorship with himself as President of the Reich, destined to restore order not only in Berlin, but to operate beyond the German frontiers and liberate Germany from the consequences of the lost war. He had fired the imaginations of the younger men."

If ever man failed in prophecy or in estimate of the abilities and capacities of a public character, this author did so most woefully. If he still lives, he must realize how much all civilization all over the world would have profited if Hitler had been the inept and unequipped person he pictured in his book.

But the train of ruin that Hitler left is a part of a bloody history that we now cannot alter or change, and therefore we must concentrate our minds on the future, nourishing the hope that war makers must and can be stopped in their tracks, before they again upset the world and bring another harvest of death and devastation. While the San Francisco Conference sits in solemn session, we ought by prayer and by encouragement strengthen the men who guide it.

It is too early to predict what the issue of the Conference will be, but I have come from Washington down to your community, to make you conscious of one overshadowing and fateful fact, that if the world and Russia, this new giant in the family of nations, cannot find a way to live together in confidence and good will, all we do in San Francisco will be a waste of time and effort. Therein lies the gravest and most terrible problem of the moment.

Let me say with all the emphasis I possess, that the persons who now hopelessly declare, in your presence and in mine, that the United States is inevitably destined to fight another great people, are wittingly or unwittingly creating a national psychology that may bring to us in the not distant future, another world conflict. This, I think, can be avoided by wise statesmanship, and by the creation of a sentiment of understanding, despite the fact that both countries are diametrically opposed in their economic, religious, and political conceptions.

The soldiers of the United States and Russia marched hundreds of weary miles over European territory, much of which they had never before set foot on; they faced the perils of ambush and of hidden underground explosives; and by courage and dash unparalleled in the history of warfare, they met together to clasp hands on the sacred soil that Hitler boasted would never be touched by foreign soldiers. And ever since these European fronts of the east and west armies merged at the Elbe, the fraternizing American, British and Russian soldiers, at long last released from personal danger, are in a perpetual state of rejoicing, banquetting and jollification. Russian women soldiers, I read, are seen on the streets of German towns, carrying flowers to American soldiers. When one of our outstanding generals, a dignified figure, ended his vocal praise of the superb singing and dancing of Red Army men, the latter gave him "the business" by tossing him up repeatedly to the ceiling. Russian generals in their colorful uniforms went wild when they saw Americans dance "the jitterbug". Here's Russia's greatest general posing for a picture with one of America's movie stars. Yes, the men who risked all, and endured all, are getting along famously, and what we in America want to see is this spirit permeate the high-up diplomats who are representing the United Nations in the negotiations now in progress to make impossible World War III.

I believe most sincerely and devoutly in the American way of life, in the competitive system or the free enterprise system, as some refer to it; I do not want the United States Government to be the employer of every one of its citizens, and have all our manifold business and manufacturing activities directed by Government officials. If Russia, however, accepts these principles and refrains from attempting by force to impose them on us, I see no reason why her devotion to an ideology we do not like, should involve us in war.

I have a feeling Russia in some instances is pursuing a wrong course, yet, critical as I may be, I think it is essential for the peace of the world that the western nations patiently try to understand the Russian position, and strive by every means, without the sacrifice of our real interests, to bring about accommodation of conflicting views. This was accomplished in the waging of the war against Germany and we should not despair of it now.

As between the United States and Russia, there are fundamental reasons why we should not be brought into open conflict. Both countries have great expanses of land, underlaid with rich mineral resources, and obviously need no expansion of area to permit their complete and prosperous development. Our aims are not unlike—to provide full employment and to elevate the standard of living. Such a goal is surely not attainable if a country is to waste its resources and manpower in eternal conflict. Russia's terrific human losses, moreover, ought to be a brake on war as a means of promoting her national interests.

May I read, in conclusion, prophetic words from the monumental study of Alexis de Tocqueville, great Frenchman, who wrote, in 1835:

"There are at present two great nations in the world, which started from different points, but seem to tend toward the same end. I allude to the Russians and Americans.

"All other nations seem to have nearly reached their natural limits and they have only to maintain their power, but these are still in the act of growth. All the others have stopped, or continue to advance with extreme difficulty; these alone are proceeding with ease and celerity along a path to which no limit can be perceived.

"Their starting point is different and their courses are not the same, yet each of them seems marked out by the will of heaven to sway the destinies of half the globe."

These two nations—Russia and the United States—are now said to control 75 percent of

the productive capacity of the world. They have fulfilled the predictions of the great Frenchman. Upon how these two nations, together with England, react to each other depends, it seems to me, all our hope for peace in the future.

Gen. Dwight D. Eisenhower

REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1945

Mr. McCORMACK. Mr. Speaker, the magnificent victory of our armies in Europe is now making possible the return of many great generals who directed their mighty drives. We have just been told that the supreme commander himself, General of the Army Dwight D. Eisenhower, is to visit Washington on June 18. Plans have already been made for public acclaim of this illustrious hero. The leaders of both branches feel, and have agreed, that a special ceremony should be arranged by the Congress of the United States to symbolize the welcome and gratitude of all his countrymen for the service General Eisenhower has rendered to the Nation.

Surely some national honor must be prepared for the man to whom his country owes so much. For 3 years, since he left these shores in June of 1942 to command our forces in Europe, he has borne a responsibility more grave than that of any other soldier in the field. The armies under his command have been the greatest we have ever mobilized in defense of our liberty.

Through a series of strategic and tactical triumphs, General Eisenhower has discharged his responsibility with a brilliance that has fired the imagination of every Allied Nation, as it has struck terror at the hearts of our enemies. Now he is coming back to us briefly, before he returns to the task of bringing order out of the chaos which the funeral pyre of the Nazis has left as ashes in a broken land.

Mr. Speaker, the calamity of war places heavy burdens upon the shoulders of military leaders. Despite the training of our service schools and the lessons of field exercises, there can be no thorough preparation for the magnitude of the problems suddenly thrust upon a man called to carry out such gigantic endeavors.

When General Eisenhower went to Great Britain as the choice of our Chief of Staff to plan the defeat of the conquest-mad Axis Powers, there were few outside his profession who even knew his name. During the last war, as a young officer not long out of West Point, the fortune of assignment kept him from the battlefields of France. It was his growing professional competence in the two decades of peace which commended him to posts of mounting responsibility. When General Marshall selected him for the crucial assignment at the head of our European forces, he was Assistant Chief of Staff of the Operations Division of the War Department General Staff.

I do not know everything that may have been in the mind of the Chief of Staff when he selected General Eisenhower for the top post in Europe. We may have no doubt that he possessed the utmost confidence in this modest man's genius for high command. But, in addition, I can guess that General Marshall was thinking of the close relationship which must be established between the British and American forces as the key to their effectiveness against the enemy. He knew that one of Eisenhower's greatest assets was the warmth of his personality. No one could experience it without realizing that it came from a deep integrity of character and a rugged honesty. For 3 years the strength of these qualities has symbolized in the minds of our allies the all-out determination of our people to have victory at whatever cost.

General Eisenhower's task, Mr. Speaker, has not been wholly military. His victory has revealed him as a military statesman of the highest order. War has matured his genius for leadership, which has won the admiration of our allies as well as of our own Nation. From the outset of his service in Europe he ordered and enforced rigidly a close collaboration between our forces and the British. When Axis propaganda attempted to create suspicion and discord between us, it was General Eisenhower, by the example of cooperation already achieved in the combined staffs of his headquarters, who caused it to fail.

On the combined strength of his forces depended the success of the strategy in north Africa, which won us the first of our stunning victories in May of 1943. That winter and spring were anxious days for the American people. For the first time American soldiers, almost untested in battle, were face to face with the combat-hardened German veterans who had overrun all of Europe. These Germans had been described for us as supermen, skilled in blitzkrieg, adept in every phase of modern war.

I do not believe that any of us doubted the outcome. There is something in every American's heart which tells him that no other soldier is a match for our fighting men. But the German had created for himself an awesome reputation. There must have been some during those days when Rommel threatened a wide break-through at the Kasserine Pass who wondered whether our men, for all their courage, were a match for these hardened troops.

We were not long in having our answer. General Eisenhower's valorous counterblows first blunted, then contained, and at last threw back the weight of Rommel's mechanized thrust. We realized then that armored tactics learned in the mud at Fort Knox brought success in battle. We learned that infantry doctrines taught at a dozen posts in this country were the equal of any tricks in the German bag. We learned that the massed artillery fires developed at Fort Sill could immobilize great formations of German soldiers and literally destroy their will to resist. Finally, in those triumphant days of early May, we saw these veterans of Hitler's victories driven to relentless defeat at Bizerte and Tunis.

Such victories are won by the courage and fighting heart of our soldiers. But their architects are the men who plan the strategy and lay out the tactics. Weeks, sometimes months before, they draw the blueprints of a campaign's success. In the end, it is one man's responsibility—the commander's—to select and approve the final plan and the timing of its execution. In Tunisia, it was General Eisenhower who won the first great Allied victory over the Axis.

As we look back now on the series of campaigns—Sicily, Italy, the Channel crossing, the invasion of southern France, the break-out over France, the thrust across the Rhine—there seems to have been a certain inevitability to their pattern. The strategy has paid off so handsomely that we may be lulled into the belief that its success was foreordained.

I am sure there was nothing inevitable about it to General Eisenhower, who was charged with the responsibility of each one of these gigantic moves against a well-prepared foes. Mr. Speaker, every soldier knows that there is nothing sure in war. Disaster might have met any of those great assaults against the German force. It could have been avoided only by the cool, clear estimates of the situation which the supreme commander was able to make. Only by the minute planning of his staff down to the last detail, capped by the element of surprise, could we go into each new battle with confidence that from this calculated risk might grow a formidable victory.

We are now almost at the eve of the first anniversary of the Normandy landings. A year ago at this time, our invasion armada was poised for the greatest single assault in history. The unknown enemy in those fearsome hours was not the German strength. It was the weather. High winds had whipped the Channel to dangerous turbulence. Cloudy skies threatened disaster to our airborne troops. For a day the invasion was postponed. Another delay must stall it for days until tides were once more right.

That awful moment of decision on the 5th of June was General Eisenhower's alone. We know that he met it boldly and, after ordering the operation to proceed according to plan, he drove to the fields where the transport planes were waiting. He watched the paratroopers while they blackened their faces and chatted with the airborne infantry which would ride gliders into battle. Whatever anxiety he felt, it was his confidence that fired these men.

Toward midnight the sky trains were on their way to a rendezvous at the bridges which guard the roads to the beaches where our troops would land at dawn. Mr. Speaker, that night the lives of tens of thousands of courageous young Americans depended on the plans which had been made long before to win this epic beachhead on the Norman coast. Those plans and their execution were

the high responsibility of General Eisenhower.

The courage of this quiet man must have had its greatest test that night and during the days that followed. Coolness and calm, clear thinking above all things were necessary to draw from the confusion of battle on the beaches the moves which would give it success. As our strength grew and the fighting swept across the marshes and fanned westward toward the prize of Cherbourg, the battle plans were tested and confirmed. At last, after 2 years of preparation, the commander's flag was firmly planted on the mainland of France. The plains lay before him, a classic battleground for a war of maneuver which would bring victory in the west.

Mr. Speaker, in all the events that have followed his command in Europe, General Eisenhower has proved himself a man of truly heroic stature. He has seemed to grow with the growth of our military operations until now I have no hesitation in saying that history must mark him as one of the world's most illustrious military leaders. His genius has directed the moves of great generals who commanded the armies and the army corps, the divisions, and the smaller units which cut to pieces the mightiest military machine the Germans could build.

In honoring the supreme commander of the Allied Expeditionary Force, I feel that we shall be paying the Nation's homage not only to him but to the other leaders and the brave men who have earned his highest praise and our own. We shall consider it a great privilege to have General Eisenhower come here where the entire Congress may in some small way show him the warmth of the Nation's regard for his superb achievements.

The Mystery About Jose del Castano, Spanish Consul General in Manila

REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. COFFEE. Mr. Speaker, on February 13, 1945, over 3½ months ago, I made a speech on the House floor, in which I discussed the status of one Señor Jose del Castano. At that time, I warmly urged the State Department and the War Department, in collaboration, to pick up Del Castano upon the liberation of the city of Manila, try him as a war criminal and, if convicted, deal with him summarily.

During the last few days, I have been advised that Del Castano has been in the United States since May 10. Upon being apprised of this startling information, I made strenuous efforts to secure the latest data relative to this gentleman from the War Department and the State Department.

I am now advised by Dean Acheson, principal Assistant Secretary of State, that Del Castano has been sent out of this country on a vessel flying the Spanish flag, from New Orleans—that he has been kept under surveillance during his entire time in the United States—that he was required to board the ship for departure at New Orleans, with his family, immediately upon arrival at that port.

It appears that Jose del Castano was declared persona non grata by our State Department; that our Army authorities in the Philippines had picked him up on the capture of Manila; that Del Castano had claimed diplomatic immunity and that he was accorded the rights and privileges of a diplomat by our State Department.

Personally, I am disgusted and outraged that we are so solicitous of these Fascists and so careful to safeguard their interests. It has been my experience that people whose prominence has been achieved in the democratic field, internationally, have a very difficult time securing an entree into the United States and are often denied means of transportation. With our railroads and merchant vessels congested, it would appear that we should be very cautious about extending privileges to men of the character of Jose del Castano.

I have been advised by Allan Chase, author of Falange and the Five Arrows and a leader in the crusade to expose Franco, by wire from San Francisco, that Del Castano's military aide, Vice Consul Guiterrez, is now a prisoner of American military authorities at Manila. The same treatment should have been accorded Del Castano. He is a war criminal—he is a proven enemy of the United States. The New York Post editorially has taken a leading part in demanding that summary justice be meted out to Del Castano.

For the sake of refreshing the memory of those who may be unfamiliar with the situation, I am quoting the facts concerning this Falangist:

On November 3, 1940, Jose del Castano, chief of the National Delegation of the Falange Exterior—or the overseas division of the German-run Falange Party of Spain—was appointed Spanish consul general to Manila. Twenty-four hours later, the official newspaper of the Falange in Madrid, Arriba, published the official announcement that Jose del Castano had also been named chief of the Philippines cells of the Spanish Falange. A veteran leader of the Falange—the Spanish branch of the Nazi Party—Del Castano had long taken orders from Gen. Wilhelm von Faupel and the other Nazi officers who really control the Falange.

At the same time that Del Castano was sent to Manila, the Nazi-Falange Spanish Government also sent General Riestra to Habana as consul general. Riestra was just as important in the Falange as Del Castano, but Cuba was more alert to the Falangist menace than we were. Within 60 days of his arrival in Habana, Riestra was thrown out of Cuba—thanks to a courageous campaign led by Senator Augustin Cruz, and to the determination of the Cuban Government to stamp out falangism.

In Manila, Falange leader Del Castano was to suffer no such indignities. He built up the Falange, and, when Manila broke diplomatic relations with Germany, Italy, and Japan, on June 18, 1941, Del Castano took over their official duties in the Philippines. The Spanish consulate, under Del Castano, became the clearinghouse for all Axis confidential messages.

Mr. Speaker, I deplore the action of our State Department for letting Del Castano slip through our hands. Is not it time that we reassured the American soldier, fighting against the Japs in the Philippines and elsewhere, that we are determined to punish enemies of the United States?

James R. Young, former International News Service war correspondent, novelist, author of the book and motion picture entitled "Behind the Rising Sun," has repeatedly inveighed against Del Castano. The attorney general of California, Robert W. Kenny, has stated that Del Castano, during May, was in attendance at the San Francisco Conference. Gen. Douglas MacArthur expressed vigorous opposition to the position taken recently by Brig. Gen. Manuel A. Roxas, a prominent Filipino politician, who was captured by the Japanese, when Roxas announced his objection to the current policy of eliminating from the Commonwealth Government and the Filipino Army any who had worked for the Japanese.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, June 4, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with universal military training written by Hon. John J. McCloy, Assistant Secretary of War. The article, which is entitled "We Do Not Want Another War," recently appeared in a national publication.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE DO NOT WANT ANOTHER WAR

(By John J. McCloy, Assistant Secretary of War)

Opponents of universal military training for youth in the postwar years frequently raise the question as to why we should develop our military capability when our Nation is dedicated to the maintenance of peace through an international organization such as that contemplated in the Dumbarton Oaks plan. They go further and ask the proponents of the training program to name the nation or nations we are arming ourselves to fight after we have demilitarized Germany and Japan and set up a world peace organization.

Through the two questions spring from the same approach, the second one is not constructive in that it is based upon a hidden or

loaded assumption, much as is the well-known trick question, "Have you quit beating your wife?" The hidden assumption is that we must prepare to fight a particular enemy or not prepare at all. Stated another way, the second question carries the hidden assumption that we should do nothing about preparedness until another nation becomes our enemy, until another nation attacks us.

In still another respect it seems to be unfair. Those who urge it must realize that to provoke a discussion of possible war with another nation may harm our international relations. The balance of good relations between nations is delicate at the best. As the price of preparedness to defend our security against any aggressor or combination of aggressors which might hereafter wish to attack us, we in America should not have to single out particular nations and talk about them as possible enemies.

We do not think of ourselves as a fickle nation. But our international alinements in the past 200 years should at least be thought-provoking to those who insist that, with Germany and Japan crushed, we can forget all about the problems of national defense until we see the whites of the eyes of the next enemy. In 1754, in the French and Indian War, we were alined with the British against the French. In 1776, in our War of Independence, the situation was exactly reversed. In the War of 1812—the one in which our Capitol was burned—we again had the French for allies in our war with England. In 1846, we fought a war with the Mexicans over a large part of the South. In 1898, we fought the Spanish. The next year, in the Philippine Insurrection, we fought Filipinos whom we had freed from Spain. In 1914, we fought the Mexicans at Veracruz and 2 years later we were fighting them again on the Texas border.

OUR UNPREDICTABLE ALLIANCES

In the First World War, we and the British and the French and the Russians and the Italians and the Japanese fought the Austrians and the Germans and the Turks. In early 1941, we began our support of the British and French who were alined against the Germans. The Finns were alined against the Russians who were, in turn, in a treaty relation with the Germans. In late 1941, we began our fight with the Germans and the Italians. The Russians and the British and later the Turks became our allies. The Finns were fighting our ally, Russia, with German help. In the same year, we began our fight with the Japanese, and the Filipinos were on our side. In 1942, we were alined against some of the French and fighting with others, and we had the Mexicans on our side against the Germans and the Japanese.

So, as to the question of who our enemies are now, we can tell today, but as to who they will be, the only answer that can be made is that we do not know.

This is not a specific answer, but it might give us some food for thought as to whether we want or need a specific answer now to the question in order to consider further the matter of preparedness. Perhaps the best approach to the first question is to set out, in McGuffey's Reader style, a few basic assumptions upon which both the opponents and the proponents of military preparedness can, probably agree:

1. There have always been wars. This does not imply that there always will be wars, but the statement is pertinent to our consideration of the matter.

2. We do not want another war. We abhor war and as a peace-loving Nation we will do all in our power to prevent it. We must at the same time realize that we are only one Nation in an ever-contracting community of nations and we may or may not have all of our wishes.

3. We in America have sought earnestly to avoid war. We have set the pace in scrapping our armament. We have set an example in disarmament. We have not gone in for territorial aggrandizement, at least—to stay strictly away from arguments at this stage—not in recent years. On the contrary, we have gone in for what actually amounted to unpreparedness, in the belief and the hope that war could thus be avoided.

TIME TO PREPARE FOR WAR

4. We have, twice in 50 years, become involved in wars transcending, in horror and ferocity, all preceding wars. In both cases, we were able to demonstrate to our enemies just how tough we can be—if given time.

5. In both instances, we had some time to get ready. But while our allies suffered temporary defeat and devastation, we were in such paroxysms of haste that we paid dearly in lives and extravagantly in our national substance, for quick conversion from unreadiness to meet the enemy.

6. In both of the wars of this century, our Nation's participation probably made the difference in the outcome.

7. This land of ours is a great and wealthy nation, rich in natural resources, rich in the productivity of our soil and in the capacity to produce all things that add to the comfort and pleasure of living in this world. As such, would it not be a natural objective for an aggressor to pick?

8. And finally: Assuredly it is true that we will strive for peace and peaceful solutions of conflicts of national interest; that we will do our part, in collaboration with other peace-loving nations, to avert future wars. We in America want no more plagues like facism, nazism, or bushido.

With these factors in mind, let us now look at the problem that we as a nation face. Obviously we are not all in agreement about what are the proper measures to solve it. But we do agree that, whatever those measures are to be, they had better be good.

The alternative, their failure and military defeat, with what military defeat would mean should another war come, is an unthinkable prospect. Worse than a repetition of this world-wide holocaust would be its repetition plus military defeat for America. Planning, in which this grim possibility is not given proper place, would seem to be far short of complete. Consequently, we should keep this point in mind as we look at the ways in which we might accomplish our objective.

I believe that the best possible way to safeguard our Nation's future security is through the plan devised at the Dumbarton Oaks Conference or some similar plan. The Dumbarton Oaks proposal does not offer a magic formula for the postwar years. It is not a slide rule which statesmen can work when trouble threatens, and thereby automatically produce a peaceful answer.

It is a plan by which the combined power of the peace-loving nations will be pledged to enforce better behavior among nations which threaten to run amok. If a future Hitler or Mussolini realizes that the combined power of all the nations dedicated to preserving peace in this world is really going to be used for that purpose, and if that combined military potential is so great that it cannot be overcome, then he is not likely to be so foolish as to start something that will surely end in defeat and disaster. And, further, if he does start something, the fire can be put out swiftly by force before it becomes a conflagration.

In other words, the Dumbarton Oaks idea is one with teeth in it, designed for the very practical world in which we live. It is based upon the availability of military power to enforce its objective of peaceful settlement of differences.

Now if we are to join with other peace-loving nations in such a world organization, shall we not be obliged to have the military potential to give life and strength and meaning to the decisions made by that organization? Unless we have the required military potential capable of going into action on short notice, will not the words of our diplomats be hollow and meaningless? Here is where military preparedness would seem to fit in.

Military strength, amply sufficient for the purpose and cause of preserving peace in this way, might be kept available in a large standing army. This would be one way. Or it might be kept available in a well-trained citizen reserve,

AN ARMY OF TRAINED CITIZENS

It is foreign to our American policy to burden ourselves with a huge standing army—large numbers of men taken for long periods from productive effort in our Nation's economy to stand and wait in peacetime for a war which we hope will never take place. By maintaining a large standing army, together with other peace-loving nations, we would have enough combined military strength to discourage or stamp out aggression in its beginning. But a preferable way to have potential strength in sufficient size would seem to be to give every man thorough and intensive training in his youth and then release him to go ahead with his trade or profession or job, thus leaving the regular armed forces relatively small. Then the citizen would be ready—in reserve but not in service—to do his duty capably, efficiently and with a decent chance of survival, if the emergency should ever come.

So, to summarize, Dumbarton Oaks is a means by which it is hoped we shall attempt by active steps, backed by force if necessary, to keep the peace in a world where lasting peace has never yet been achieved. Americans might not all agree that universal military training—applicable democratically to all young man alike—is the preferable way to build up this reserve strength, but at least it has its points. It seems to fit the idea of our role in a Dumbarton Oaks plan better than a large standing army would.

We do not control or seek to direct world affairs. That would be contrary to the principle that other peace-loving peoples have their rightful part in shaping them. We do want to influence world affairs in what we believe to be peaceful directions, with due regard for the rights and views of others. Thus our first care will be to avoid wars by all honorable means. But in this attempt to outlaw war, we shall never gamble with our national security.

To go back to those afore-mentioned eight points of agreement: The inevitable conclusion any future aggressor could not miss is that the United States should be attacked and defeated first. Failure to do this has twice cost the aggressor his war. We know—and we may be sure that he will know, too—that distance has been a saving factor for us in the two World Wars. We also know, as does he, that modern implements of transport and warfare no longer make distance the barrier that it was, even in the early days of this war. Unless we blind ourselves to reality, we will realize the distance will be an even less formidable obstacle in the future development of planes, rockets, and ships. So, the question of which nation an aggressor would attack first deserves a lot of consideration by all of us who love our country and want to hold on to it.

If such an attack should come—and it could come from anywhere on the globe—and if our situation is then similar to our state of unpreparedness in 1940 when France fell, what would be our prospect of a successful defense? What would be our course, despite all that we might do as a member of a world-peace organization?

Again, the answer seems to be: Either a large standing armed force or a well-trained citizen reserve ready to mobilize and move quickly.

Now, the taking up of arms in the Nation's defense is something that has been recognized as an obligation of every able-bodied man of fighting age in this country

from the very beginning. Aggression threatening our national security we would resist to the best of our ability. The question really is whether or not the resistance will be trained, organized, and effective, or untrained, disorganized, and ineffective.

The answer to this question also will determine whether in case the emergency should come, these young men will be able to meet their well-trained adversaries in combat with a better chance of survival.

What it seems to boil down to is whether or not our able-bodied manpower, ever the bulwark of national defense, is to be always ready to discharge that traditional obligation. There is nothing new about the obligation. There is, however, a plain need that those who may be called on to discharge it should be trained and fitted to do so.

The need for training is—and will be—greater than ever before in view of the rapidly increasing intricacy of implements of warfare. Perhaps no lesson emerges more clearly from the experience of this war than that modern techniques in warfare require intensive training on the part of those who use them. While it is beyond the scope of this article to describe the details of a training program that would be adequate for the future, it may be stated that the training should be intensive, well-balanced, and carefully planned. It should include basic, specialist, and small and large unit training, and a sufficient period devoted to combined field maneuvers.

READY FOR NATIONAL EMERGENCY

Improved training techniques developed in recent years and proved in this war should be employed and further improved. The prime object of the program should be that, at the end of the period, the trainee—skilled in at least one of the necessary specialties of a modern army and trained in the use of that specialty in teamwork with others—would be able capably and confidently to discharge his duty to his country in time of national emergency.

Universal military training is not offered as the sole or automatic answer to the problem of preparedness. The vast reaches of science in modern war are just dawning on us. Manifestly our research and development program would have to go forward, so that, if another war should come, our men would not be handicapped with antiquated or obsolete equipment or thought. Likewise, the Nation's readiness for industrial mobilization ought to be maintained. As with the case of manpower, a state of readiness in reserve is indicated all around.

But whatever the nature of the implements, wherever the scene of combat and whenever it may come, men—well-trained men and alert—must use the weapons. There never was and never will be a substitute. Men—well trained and alert—must plan and direct the execution of our national defense program. Men—well trained and alert—must be the keystone of our national security.

Proposed Fair Employment Practices Committee

EXTENSION OF REMARKS
OF
HON. THEODORE G. BILBO
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a communication from Rev. L. L. Scott, of Savannah, Ga., in reply to attacks which have been heaped upon him because of his open opposition to the so-called FEPC or UEPC.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECOND BAPTIST CHURCH,
Savannah, Ga., May 25, 1945.

Senator THEODORE G. BILBO,
United States Senate Building,
Washington, D. C.

MY DEAR SENATOR: Yours of the 19th instant reached my desk today. Since the receipt of your first communication, it has been my very unpleasant lot to have been the object of a wave of race-wide criticism, originating in Washington. Some even took a chance with the law of libel in order that they might pour out their venom upon me. They are due congratulations however, for their suddenness of attack. They made the simple mistake of declaring a state of war against one who would never do his race an injustice, nor would he permit anyone else to do so if he could prevent it.

The immortal Wendell Phillips, in his tribute to the gallantry of the great statesman and soldier, Toussaint L'Overture, had this to say: "You read history not with your eyes but with your prejudices." No truer statement could be made of those who took exceptions to our correspondence, as was read into the CONGRESSIONAL RECORD.

If freedom of speech is forever reserved to American citizens by the Constitution, and is embodied in the Atlantic Charter, most certainly the minority groups can ill afford to encourage its abridgement, nor penalize one of their own number who exercises the very right for which they claim they fight.

I opposed the FEPC because I think it impractical, inoperative, and purely idealistic. I think the ends to which the FEPC is aimed may be met with another better and more fundamental program, and one that is a hundred times more satisfactory to all concerned. If as an American citizen, I had no constitutional right to speak opposing this measure, then I owe 13,000,000 Negroes an apology, and I hasten here and now to make it.

The United States Government, together with the various States and cities, should inaugurate a program designed to eliminate slum districts, which are nothing less than breeding places for disease and crime among Negroes, and with the money spent in the prosecution of criminals, build a decent place for people expected to grow into decent citizenship. This can be done. In addition to this, many Negro schoolhouses are mere firetraps, surrounded by unholy sanitary conditions, and are far from being an inducement to Negro boys and girls to attend school further than the age in which they are forced to do so. And it often happens that as soon as they reach the age where they cannot be forced to attend school, they immediately stop.

One last word about the school situation. The Negro school teacher's salary is not commensurate with the type of work he is required to do, and the qualifications required of him. This situation can and will be solved by amicable means in the South, if given a reasonable time, together with the right kind of cooperation and with the right kind of people on the job.

The Negro has the right without any violation of the law whatsoever, to pool his small holdings and make for himself a business in almost any field, where he can hire his own people, if he so desires, as some are doing. And thus rather than seek to be an employee, as the FEPC contemplates making him, he could thus become an employer.

The above three paragraphs constitute my major reasons for opposing the FEPC, and are the things I think should, and do, constitute the fundamental program which should get under way, instead of that offered by the FEPC.

Now without taking more of your time than is necessary, with your indulgence I close with a reference to Back to Africa. It is to be grievously regretted, that you and I would be understood by any person of yours or my group, who deem either of us interested in sending by force, American citizens of any color or creed to Africa or anywhere else.

. very small part of Africa belongs to Negroes, notwithstanding it is their native land and one of the largest and wealthiest countries in the world. Not even that part on which Negroes died during this war, driving the Desert Fox to his lair—and Mussolini upon the path of his much-deserved doom.

When the map of the world is redrawn and the races of the earth shall receive their just and equitable share, free from the heels of tyrants and oppressors, the Negro shall have apportioned to him as the holder in fee simple his native land, whether all or any of those in foreign lands return. The position of Negroes all over the world will be improved a thousandfold, for living together peaceably is a voluntary matter and cannot be forced upon any people in a democracy.

The United States should take the initiative in this direction, in this international apportionment, particularly as it affects the Negro. It is a debt that is due him, and the time is now.

This is the only solution for world peace, and not until then shall the lamb and lion lay down together and a little child can lead them. If as you say, your friendship for Negroes has often been questioned by them, you now have the opportunity to remove for all time, any further presumption in that direction, by lending the dignity of your office to the support of this national and international matter affecting America's largest minority. I would be pleased to hear again from you soon in this connection.

With apologies for taking up your valuable time with this lengthy correspondence, I beg to be

Very truly yours,

REV. L. L. SCOTT.

P. S.—I shall be pleased if you will do me the kindness of reading this into the CONGRESSIONAL RECORD.

L. L. S.

World Security

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1945

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on world security, published in the Vermont Farm Bureau News for June 1945. This editorial is written by Arthur H. Packard, president of the Vermont State Farm Bureau, a real dirt farmer, and a man who looks ahead in this world of ours.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

This year on Memorial Day we saw boys and girls decorating thousands of graves of veterans of former wars. Next year many more of the graves of soldiers of this Second World War will receive recognition. It is good to live in a nation where human beings are all important. Great progress will be

made when every nation of the world values human lives as we do.

It has been well said that the price of liberty cannot be paid for in one great war and the benefits passed on for generations ahead. A little over 25 years ago a substantial number of our boys gave their lives to end wars and to make the world safe for democracy. What they really did was to make the supreme sacrifice so that we and all the nations of the world could have one more chance to enjoy the "four freedoms."

Evidently we and the other great powers did not realize the punishment that demagogs could deal out to the world if we did not improve the great opportunity which was ours in 1918.

Who caused the Second World War? It would be more comforting, of course, to say that Germany, Italy, and Japan caused all the trouble, but possibly the profit motive, some greed and selfishness might have been factors also. It must have been the profit motive and a complete indifference to the opportunity for world peace of 1918 that prompted us to ship all our scrap iron to Japan for 10 years.

When every nation in the world starts building protective trade barriers and embargoes it must be that men forget that God makes a great variety of climates and soils. Vermont and neighboring States, for instance, should be producing maple syrup, sugar, or candy for those who love it in this Nation and other nations, and at a price which makes maple production profitable, but we, in Vermont, should not be trying to produce coffee, rubber, or bananas and a multitude of other products which we need. We had better pay for these with milk, eggs, fruit, and vegetables. Each part of the world will be happier if it will learn how to produce efficiently so it can exchange goods and services with others. This is largely a new horizon but worth a trial.

Let's remember that destiny has given us one more chance for a peaceful world. I believe that this is what millions of men and women all over the world have asked for in earnest prayer.

Marquis Childs told me a few days ago that he believes that the reason that we have escaped the robot bombs was that Hitler and his crew knew that at best they could send us only a few and these few would create a unity in America, like Pearl Harbor did: but Mr. Childs said something else; here it is: "If America can truly picture the destruction of civilians and property in Germany and England and France, then they will realize what bombers and robots can do to any nation in 10 or 20 years."

Yes, it is true that one generation cannot pay for the security of the future with blood, sweat, and tears. but the San Francisco Conference, and others to follow, can find a plan built from tolerance, a desire to live and let others live, a firm conviction in Christianity which can replace a third World War.

When the war with Japan is over, let us be prepared to thank our God that we have a second chance for peace—a chance which was most uncertain 4 years ago and a chance which Christian people may never have again.

War Refugees at Fort Ontario, N. Y.

EXTENSION OF REMARKS
OF

HON. HADWEN C. FULLER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. FULLER. Mr. Speaker, the situation of nearly 1,000 war refugees housed at Fort Ontario, N. Y., has attracted wide attention in the Nation.

I wish to include in my remarks a memorial to the President and the Congress of the United States concerning the freedom of these refugees which has been placed in my hands by the citizens' committee for the Fort Ontario Refugee Shelter, of Oswego, N. Y. This gives the history and present status of these people.

In view of the importance of the matter, I believe the reading of this memorial is worth while for every Member of the House.

The memorial is as follows:

A MEMORIAL TO THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES CONCERNING THE FREEDOM OF WAR REFUGEES TEMPORARILY LIVING AT PORT ONTARIO, OSWEGO, N. Y.

In August 1944, 982 refugees, natives of 17 European countries, were brought to Oswego, N. Y., as guests of the United States. Many of these people had been on the march since 1934, escaping ever from Hitler's advancing power and persecution. During their years of flight, most of the values ordinary humans hold dear and sacred were lost to them—homeland, possessions, security, friends, relatives and, in some instances, family. Consequently, when, to a limited group, the invitation was extended to come to America, it was seized with eagerness and anticipation. Now at last, behind them lay terror, persecution and insecurity; ahead of them was freedom and an opportunity to build life anew.

These refugees have now lived in our land for almost a year. They have a tentative security, the friendship of the people of Oswego whom they have been able to meet, modest provision for food, shelter, and medical care. But instead of the freedom they sought and of which they dreamed, they have been closely held in a fenced area on the shores of Lake Ontario, with permission to be absent from the camp for only 6-hour periods, and without permission to visit relatives or friends beyond the limits of the city of Oswego. Instead of the opportunity to fashion a new life for themselves and their families, they have been deprived of a chance to work at any gainful or life building pursuits; and this last in the face of a local and national war manpower shortage of critical proportions.

To be sure, after all arrangements for their departure had been made and they were at the ports of embarkation, these people signed statements saying that they agreed to reside at Fort Ontario for the duration of the war and then to return to their homelands. When, for so long, one's very life has been in jeopardy, all the ramifications of a document one signs to gain security do not immediately become evident, and it does not seem fair to enforce commitments which are inhumane and which are accepted only in desperation.

Succoring these people, less than 1,000 of the distressed millions of the world, represents our "token of good will to all mankind." Such was our statement when we carefully selected them to be our guests. The wisdom exercised in their selection has been confirmed by our own relations with them, for we have learned that they are unquestionably very worthy. They are intelligent; the adults, in their contacts through lectures, visits, etc., have provided an intellectual stimulus to the city of Oswego. The children and young people in our schools and college rank high. All are cultured and talented; many of the group were formerly business and industrial leaders; some are musicians of concert-stage ability, artists, actors, writers, and members of many of the learned professions. They are law abiding. Having so long been the victims of autocracy, they are imbued with the idea that democracy represents the good life. Some are already tightly bound to this country. Nineteen have sons in our armed forces; some even have wives and many have brothers and sisters who are citizens of this Nation.

These 982, wisely or unwisely, we have brought to our shores. They are now very definitely our problem. We need to face it realistically. Regardless of what they signed, they cannot all go back to their homelands, for in some cases these have been destroyed, and approximately one-third have been deprived of citizenship in the countries of their origin. We cannot keep them confined for an indefinitely longer period, inactive and desperate (to the point in some cases of insanity and suicide) as they see life slipping by with no opportunity to make a place for themselves and families in an onrushing world.

Less than 1,000 in a population of 135,000,000 will not in any way disturb the economic life of our country, and, since they represent a unique experiment, our treatment of them will not in any way establish a precedent or in any way complicate existing laws. As a matter of fact, we could permit them all to stay in this country without conflict with our immigration quotas. In the last 3½ years only a small percentage of the immigration quotas have been filled. To give as examples, the four countries which are most numerously present at the Fort Ontario shelter:

	Quota for last 3½ years	Immigrants to United States, 3½ years	Representatives at shelter
Yugoslavia	2,963	490	364
Germany and Austria	105,595	7,913	337
Poland	22,834	6,000	151
Czechoslovakia	9,959	1,436	41

Unless we are to deny the very essence of what we are fighting for now and have always stood for (life, liberty, and the pursuit of happiness), we should give our guests their freedom. If we do not do this, our pledges of world good will indeed sound hollow.

At the time of the arrival of the refugees, the War Relocation Authorities requested that a citizens' advisory committee be formed in Oswego to act as a liaison group between the refugees and the people of Oswego and the other nearby communities. Its members were appointed from citizens representing the varied business, civic, social, educational, religious, and labor interests and activities of the city of Oswego. It is nonpartisan in character. Both the individual members of the committee and the committee as a whole have visited the shelter many times during the past few months and have been in continuous contact with authorities at the shelter.

Gradually the committee has become cognizant of the situation as described above, and now finds itself facing a much greater responsibility than it anticipated. After long and careful consideration, the committee believes that—

1. The situation is different from anything anticipated by all concerned a year ago.

2. Action to meet the new situation is imperative.

3. Action should be taken along the lines of the following resolutions.

4. That the action recommended is in conformity with the thinking of the citizens of Oswego who share the information given in this memorial.

Resolved, That—

1. Benevolent and generous as was the intent of our Government in providing a shelter for the 982 refugees, because of restraint of their freedom, Fort Ontario has taken on the psychological aspect of a prison. We feel the refugees should be permitted to reside at

places of their own choices with friends and relatives. The taxpayers of the country should be relieved of the expense of caring for these refugees when relatives, friends, or private agencies are ready to care for them, if necessary, and guarantee that they shall not become public charges.

2. In this period of critical manpower shortage, the refugees should be permitted to accept gainful employment, and build themselves anew into their professions. In the case of many who have seen their productive years uselessly spent and no security ahead for their families, this is an imperative need.

3. The refugees who would, except for their present peculiar circumstances, be eligible under our existing immigration quotas should be permitted, should they so desire, to become citizens of the United States under existing rules and regulations.

4. Those who desire to return to their homeland or any portion of the world should be given the opportunity as soon as conditions permit.

Finally, the committee believes that the problem of these 982 refugees now living at Fort Ontario should be considered unique and apart from all other refugee problems consequent to the present war. They constitute our country's immediate responsibility. It is the Nation's clear duty, in charity and decency, to carry to its logical solution this definite obligation.

Signed: Ralph W. Swetman, president, Oswego State Teachers' College; Harry C. Mizen, lawyer and president of citizens' committee for Fort Ontario refugee shelter; Marian C. Mackin, executive secretary, American Red Cross; Daniel A. Williams, director of Oswego County Savings Bank; Jeremiah J. Davern, pastor of St. Joseph's Roman Catholic Church and member of Oswego ration board; Charles E. Riley, superintendent of schools and past president of United War Fund; William T. Griffiths, pastor of Congregational Church and president of Oswego City Council of Churches; Charles F. Wells, professor of English, Oswego State Teachers' College, and Secretary of Oswego County Schoolmasters' Club; Robert L. Allison, president, Wilcox Bros. Wholesale Grocers, Inc.; Margaret Roach, president, Oswego City Classroom Teachers' Association; Edwin M. Waterbury, publisher of Oswego Palladium-Times and past president of the New York State Publishers' Association; Louise H. Culkin, widow of Congressman F. D. Culkin and former president of the Oswego Board of Education; Marion E. Mahar, professor of history at Oswego State Teachers' College; Ralph Shapiro, president, Shapiro Paper Co. and past exalted ruler of the Elks; Matthew Barclay, past president of the Lions Club; George F. Lavere, vice president, Oswego Building and Construction Trades Council; Ralph M. Faust, principal, Oswego High School, and vice president, New York State Association of Secondary School Principals; Juanita Kersey, head librarian, Oswego City Library; Lionel A. Mohnkern, director of Retail Merchants' Bureau and third vice president of Oswego Chamber of Commerce, Inc.; James H. Lally, organist and choirmaster of St. Mary's Church and secretary-treasurer of Oswego Rotary Club; Harry B. Lasky, president, Clip-On Manufacturing Corp., and general manager, Oswego Netherland Co., Inc.; Charles G. Goldstein, chairman, war price and ration board, and past president of Oswego Chamber of Commerce, Inc.; Mrs. Anna S. Riley, member of Oswego Board of Education, and past president of the Board; Hugh C. Franklin, director of Oswego Chamber of Commerce, Inc., and a member of executive committee of Retail Merchants' Bureau; John W. O'Connor, collector of customs and president of Rotary Club; James M. Shanahan, pastor of St. Paul's Roman Catholic Church; A. J. Thompson, vice president of the United Trades and Labor Assembly, members of Oswego advisory committee.

Francis Thomas Maloney

MEMORIAL ADDRESS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. FRANCIS THOMAS MALONEY, late a Senator from the State of Connecticut.

Mr. KOPPLEMANN. Mr. Speaker, today, at the memorial exercises of our colleagues in the Congress who have passed away, in reverence we honor the memory of those whose presence once inspired our assemblies.

We miss our colleagues who shared with us the heavy burden which is upon us in these grievous times.

Particularly do my thoughts revert to an old friend from my own State of Connecticut, the late Hon. FRANCIS T. MALONEY, who died on January 16, 1945, at the early age of 51.

FRANK MALONEY gave the major part of his adult life to the services of his community and his State. He served with distinction as mayor of Meriden, Conn. In 1932 he was elected to the House of Representatives. In 1934 he was elected to the United States Senate and reelected in 1940.

Senator MALONEY, who began his Senate career as a member of the Appropriations Committee, was chairman of the joint committee created to study the procedures of the Congress, served on four other committees, one joint committee and was a member of several commissions at the time of his untimely death. In the short period of 6 years he had taken his place in the Congress of the United States as one of our foremost legislators.

But aside from his record as a constructive legislator, as a man his sense of justice, his sympathetic approach to the problems of his constituency and of the Nation, his willingness to understand attitudes whether or not in agreement with his own, bore eloquent testimony to his fairness and demonstrated his concept of a universe of "one for all" and not "all for one".

As a friend and as a colleague, I am grateful for the association which was ours and feel honored that for a period of many years we served our great State together.

My deepest sympathy is extended to his family who courageously are carrying on, blessed with the memories of a great and good man.

Bretton Woods

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, June 4 (legislative day of Thursday, May 31), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement entitled "We Believe Bretton Woods Is Good Business" from the Washington Post of May 13, 1945.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

WE BELIEVE BRETTON WOODS IS GOOD BUSINESS

Because we believe the Bretton Woods agreements can open new postwar frontiers for American business and industry and become the economic foundation for prosperity at home and a secure peace abroad;

Because we believe the Bretton Woods agreements will put international transactions on an orderly basis, and safeguard the American businessman and investor from currency manipulation and unsound foreign loans which lead to world economic disaster and war;

We have formed this business and industry committee for Bretton Woods, to give expression to the views of American businessmen on this subject We invite all businessmen who favor the Bretton Woods agreements without substantial change to join our committee.

BUSINESS AND INDUSTRY COMMITTEE FOR BRETTON WOODS, INC.
HOTEL ROOSEVELT, *New York, N. Y.*

Inviting members: Henry P. Bristol, president, Bristol-Myers Co.; Robert Butler, president, Walter Butler Shipbuilders, Inc.; C. N. Hilton, president, Hilton Hotels, Inc.; Emmet J. McCormack, vice president and treasurer, Moore-McCormack Lines, Inc.; Louis Sachar, president, Reliance Textile Co.; Walter H. Wheeler, Jr., president, Pitney-Bowes Postage Meter Co.

Committee (in formation): Clarence Avildsen, chairman, Republic Drill & Tool Co.; Barney Balaban, president, Paramount

Pictures, Inc.; William Benton, chairman, Encyclopedia Britannica; Edward L. Bernays, New York; J. A. Bloch, president, Bloch Bros. Tobacco Co.; John K. Boyle, Aeronautical Chamber of Commerce; Edward E. Brown, chairman of the board, First National Bank, Chicago; P. R. Bunker, vice president, Dodge & Seymour, Ltd.; Gardner Cowles, Jr., publisher, Des Moines Register and Tribune; Albert M. Creighton, chairman of the board, Federal Reserve Bank of Boston; Will Crocker, Crocker National Bank, San Francisco; Milton Dammann, president, American Safety Razor Co.; A. R. Davis, president, State National Bank, Garland, Tex.; Ben DuBois, secretary, Independent Bankers Association; E. A. Emerson, president, The Armco International Corp.; Ralph E. Flanders, president, Jones & Lamson Machine Co.; Henry F. Grady, president, American President Lines, Ltd.; Albert M. Greenfield, chairman, Bankers Securities Corp.; W. L. Gregory, president, Independent Bankers Association; Michael A. Heilperin, economic adviser, Bristol-Myers Co.; Henry H. Heimann, executive manager, National Association of Credit Men; James Hill, Jr., president, Sterling Drug, Inc.; Charles R. Hook, president, The American Rolling Mill Co.; Croil Hunter, president, Northwest Airlines, Inc.; Oscar Johnston, president, National Cotton Council of America; Ernest C. Kanzler, chairman of the board, Universal C. I. T. Credit Corp.; Henry P. Kendall, president and treasurer, The Kendall Co.; Jay Richard Kennedy, president, Jay Richard Kennedy Management Corp.; Edwin J. Kuh, Jr., Chicago, Ill.; William L. Maas, president, Pacific Sound Equipment Co.; John J. Mack, president, Detroit-Wolverine Corp.; Sidney Maestre, president, Mississippi Valley Trust Co.; E. H. Martindale, president, The Martindale Electric Co.; Allen May, president, Mutual Savings Life Insurance Co.; Stacy May, assistant to the president, McGraw-Hill Publishing Co.; Frederick G. Melcher, president, Publishers Weekly; William Morris, president, William Morris Agency, Inc.; John D. McCutcheon, president, John D. McCutcheon & Co., Inc.; James H. McGill, chairman of the board, McGill Manufacturing Co.; Irwin A. Olian, president, Olian Advertising Co.; Philip D. Reed, chairman of the board, General Electric Co.; Harry Scherman, president, Book-of-the-Month Club; A. Wessel Shapleigh, president, Shapleigh Hardware Co.; Blackwell Smith, Arthur Kudner, Inc.; Morton E. Snellenburg, president, N. Snellenburg & Co., Inc.; John A. Stevenson, president, Penn Mutual Life Insurance Co.; W. W. Wachtel, president, Calvert Distillers Corp.; Carl M. Wynne, president, Overseas Industries, Inc.; F. R. von Windegger, president, the Plaza Bank of St. Louis.

(The company names used in connection with the above list are used for identification purposes only.)

Capt. James Kimble Vardaman, United States Naval Reserve

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, by appointing Captain Vardaman as his aid, President Truman has, I understand, started a very fine precedent, according to Frances Burns, a writer for the Boston Daily Globe. It is the first time that a President has ever recognized the Naval Reserve and appointed as his aide an officer from this branch of the Navy. This is an extremely helpful and just action. I hope the Navy will realize that they must recognize the Reserve Corps if the Navy is to live and be strong after the war is over.

The article by Francis Burns, follows:

TRUMAN'S NAVAL AIDE IS FIRST RESERVIST TO BE GIVEN POST

(By Frances Burns)

WASHINGTON.—Capt. James Kimble Vardaman, Jr., UNSR, had been 28 days on Okinawa when a message was delivered to him in the field. It was an order directing him to report to the White House to assume the duties of naval aide to the President, his old friend and fellow artilleryman, Harry S. Truman.

That was April 28. The then Commander Vardaman had been attached to the twenty-fourth Corps shore party for the assault on Okinawa; after 14 days he had rejoined the military government section as executive officer. On April 21 he received word from the Navy that he had been made captain. But he was still in battle khaki, in a uniform which hadn't been changed for 16 days, when he climbed into a plane loaded with stretcher cases and walking wounded, and headed home.

There hadn't been time or opportunity on Okinawa to bother with stripes. They were added to the sleeves of his wartime dress blues in Washington. He wears now also the gold aiguillettes which, looped over the right shoulder, denote the President's naval aide (on the left they're an admiral's aide). But in the White House these mornings, the captain, his lined face still brown from the Japanese sun, his white hair still bristling in a crew cut, just wears field khaki with a blouse and a simple gold braid circle from shoulder under arm.

They say no other naval reservist has been a President's aide. Certainly there's never been another artilleryman-turned-Navy-man to have had the job. But Vardaman has had a third service connection. He has been in the Marines, too.

Back in 1917, the skinny young son of James Kimble Vardaman, ex-Governor and United States Senator from Mississippi, joined the Marines. He was 6 feet tall, but weighed only 117 pounds, and they bounced him out of the Marines two or three times because of his physique but he kept getting back. Finally, opportunity was offered him to go to officers' school in the Army, and the exchange was made. From September 1917 to April 1919, he served with the Three Hundred and Fifty-fifth Field Artillery in this country and with the AEF, finishing up as captain. He still weighed 117 pounds.

Captain Vardaman was a retired banker in St. Louis when he joined the Navy. For 20 years he had been a Missourian, although to this day he keeps the ancestral Vardaman residence and farm in Jackson, Miss. From 1919 for 10 years he was associated with Harry Truman in the Missouri Field Artillery Reserve. Other fellow artillerymen were John W. Snyder, Federal Loan Administrator, and Col. Harry Vaughan, the President's military aide.

It wasn't all work at summer camps. "I shoot good craps and play a tight game of poker," the captain admits with a twinkle.

They asked Captain Vardaman to join the Naval Reserve in 1939 in the Intelligence Division because of his knowledge of the industrial situation in the Eighth Federal Reserve District. He had been president, vice president, and director of various businesses, and had reorganized, liquidated, and rehabilitated industries and banks, many times in association with Mr. Snyder. After Pearl Harbor, Vardaman asked for foreign service and got it.

As r lieutenant commander, Vardaman was wounded in the Sicilian invasion by an enemy shell explosion. But, strapped up with bandages, he helped plan and conduct the leapfrog raids for General Patton's army on the north shore of Sicily, east of St. Stephano, which led to the fall of Messina.

His first overseas duty had been as security officer on Admiral Stark's staff from May to August 1942, followed by 3 months as executive officer of a naval base in Scotland and then as commanding officer of a landing party in the African invasion. He served at Oran, in Algeria, and Tunisia.

"Evenings, the captain would listen to music," his aide in north Africa says, "switching the radio to any symphony program he could find. Tea was his one vice. How that man could drink it."

His wounds unhealed, Captain Vardaman was returned to the United States for hospitalization. In December 1943 he was executive for a training program of LST crews and for 6 months last year he took special training at Columbia in the Naval School of Military Government and Administration, going from there to Samar, Leyte, and on to Okinawa.

Captain Vardaman married Beatrice Middleton Lane of Pocahontas, Miss., in 1917. Their only son, James Kimble 3d, enlisted in the Marines at 17 and is a sergeant in the Pacific.

When Bureaucracy Runs Wild

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. GAMBLE. Mr. Speaker, under leave granted me on May 28, I present for insertion in the CONGRESSIONAL RECORD an editorial which appeared in the Standard-Star of New Rochelle, N. Y., on May 22, 1945, titled "When Bureaucracy Runs Wild":

WHEN BUREAUCRACY RUNS WILD

Under the New Deal's peacetime program, magnified by the demands of war, Federal employment has grown to the stage where at present 1 out of every 11 employable persons in this Nation is on Uncle Sam's pay roll. If we eliminate from consideration school teachers, only 1 State in the Union, West Virginia, has within its borders more State than Federal employees. And, according to a recent survey of postwar plans in Washington, this condition is to grow worse instead of better unless something is done about it.

That is why the plan now proposed for a general manager over all Federal employees is worth study and sympathetic consideration. This new executive would be directly responsible to the President and his job would be to streamline Federal bureaus as an efficiency expert would undertake such a task in private enterprise. It would be a gigantic job, but it could be performed, provided patronage and politics were tossed out of the window.

Surely the time has come, with the end of the war in Europe, to consider methods by which the tremendous burdens of Federal taxation are lightened, and there is no more direct way to approach this job than to start cutting useless persons from the Federal pay rolls. As bureau has been piled upon bureau in Washington and in the multitudinous branches of Federal Government throughout the 48 States, it has seemed from the side lines that these agencies have run

hog wild with authority and supremely careless with the public's money.

For the job of Federal manager we can conceive of no one better qualified than the Senator who has year after year voluntarily assumed the role of watchdog, the Honorable HARRY F. BYRD, of Virginia. We suggest his availability.

A Square Deal for Italy

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 1, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me at the banquet tendered the Italian Ambassador, His Excellency, Alberto Tarchiani, on May 31, 1945, at the New School, New York, N. Y.:

It is indeed delightful to break bread with His Excellency Alberto Tarchiana and to participate in this tribute to him. This gathering augurs much for his success as the Ambassador accredited by his beloved country to the United States. We admire his steadfast adherence to his anti-Fascist principles at a time when it meant travail and suffering so to do. We all wish him well in his new undertaking and we want him to know that he comes to a country that has had a long and solid history of friendship with Italy; that there has always been between our two countries the fullest exchange of cultural and commercial relations. Wherever he travels in the United States he will see constant evidence of the continuous stream of immigrants from Italy to our shores, seeking the opportunities and liberties—shall I say the "four freedoms"—that America bestowed. It proved to be an enriching stream of great endurance and vitality, and those Italians readily identified themselves with America. They came to share in the American dream and abide by the doctrine of Woodrow Wilson—"Americanism consists in utterly believing in the principles of America."

When I think of Italy, I am grateful for Gentile, one of America's great aces; I think of Mucci, who was chosen by General MacArthur to lead the epic march to release the heroes of Bataan and Corregidor; I think of Sergeant Basilone, on whom we bestowed the Congressional Medal of Honor, and whose glorious death has left us a heritage to inspire future generations.

The late lamented President Roosevelt joined Prime Minister Churchill in a statement issued September 26, 1944, reading as follows: "The Italian people, freed of their Fascist and Nazi overlords, have in these last 12 months, demonstrated their will to be free to fight on the side of democracies, and to take a place among the United Nations, devoted to principles of peace and justice."

I earnestly desire Italy to take her rightful place among the United Nations. The pending congressional resolution giving fullest recognition to Italy as one of the United Allies should and must pass. She is entitled to such a distinction. There are 6,000,000 loyal Americans of Italian lineage, who are making every sacrifice on the home front and who have contributed to the armed forces of the United States more than 1,000,000 men and women. They are fighting and dying on the battlefields of the world for the American ideals of freedom, tolerance, and equality. To deny Italy a voice at the peace conference with the other United Nations would be to stifle the forces working so desperately for her rejuvenation. It would ill repay Italy and the Italian people, whose hands held high the lamp of learning through the Dark Ages, and caused that light to glow into the brilliance of the Renaissance. Italy and her people have suffered immeasurably from bad leaders but fascism is no longer in the saddle in that fair land. We now underscore the names of liberals, e. g., Sforza, Croce, Tarchiani.

Americans were startled the other day when Pietro Nenni, Italian Socialist leader, was arrested for a so-called violation of Allied military regulations. In support of the cause he represented he made a speech to a group of workers in northern Italy. Such an arrest was most improvident. It could not have reasonably been made on the grounds of military necessity or military security. There are no Nazi armies fighting in Italy, but the north does contain antifascism elements and democratic forces which are the political backbone of Italy. As a result of universal protest, Nenni was released, but his arrest brought into focus the disheartening fact that military security has been used as a facade to prohibit freedom of speech in Italy. This suppression of free speech and gagging of press are the very twin evils we fought against so desperately. In addition, censorship has been restored, another docile handmaiden of fascism. We are setting a discouraging example to the vigorous democratic forces in liberated Italy with this unwarranted suppression of the vaunted Four Freedoms. How in thunder we permit ourselves to be used as tools for this aid to reaction is beyond me. Are we becoming the backstairs assistants of British imperialism? Is Uncle Sam expected to sneeze every time John Bull takes snuff? Are the British to be permitted to repeat in Italy the tragedy of Greece? I do indeed hope we will have no further participation in such untoward occurrences and that the Italians will, without interference, proceed to their task of establishing their own form of government and pursue the destiny so rudely interrupted by the dead, degraded Il Duce.

Italian cities have been left in ruin and rubble. Her economy had progressively deteriorated under Fascist mismanagement and Nazi gangsters and the results of military operations to drive the Huns from Italy, accentuated the destruction.

The Allied Control Council, now the Allied Commission, has accomplished a heroic task. It has aided greatly in whatever rehabilitation that has been effected and in all instances sought and received the earnest cooperation of the Italian people who want, most of all, the opportunity to help themselves. It is indeed hoped that the Allied Commission will offer that opportunity and that the Italian people will work out as far as they can their own economic salvation.

For reasons of self-interest we should lend an economic helping hand to Italy. After VJ-day we shall have more workers, more factories, more machinery, and far greater skills and ingenuity than ever before. We shall need additional markets for our greater productivity. The war has left a wearied world yearning for civilian goods. Italy will be hungry for American machinery, autos, tractors, radios, bulldozers, shoes, clothing, etc. But Italy is now prostrate. She has no credit—no American dollars with which to pay. We must help supply that credit and dollars.

Foreign trade must be a two-way street. We cannot hope to sell unless we buy. Italy was always a fertile market for our goods. That market can be enlarged, but we must be prepared to earn and retain the good will and friendship of the people of Italy from Palermo, Perugia to Piedmont and beyond and between. Italians have good memories. They shall long remember her friends and give short shrift to her detractors. They will reward us if we help build a new Italy out of the ashes of the Fascist disaster and Nazi gangsterism. Expressions of good will and sympathy are not enough. We have had too much of that. Action is what counts. "An ounce of action is worth a pound of preachment." Let us implement our expressions of good will with the repeal of the Johnson Act, so as to permit loans to Italy and Italian entities, and thus, in part, supply them with the wherewithal to resurrect their mangled cities and to redeem a shattered economy—supply them, in part, with the credits to buy our goods.

The reciprocity bill should be passed immediately. We would, thereby, level down the barriers that impede a free flow of Italian products to America; otherwise, Italy's economy will remain anemic.

As was recently stated in the Nation:

"Naturally, Italians and many of us are puzzled by the delay in revealing the Allied armistice terms. If the terms are honorable, every future Italian Government will make it its duty to fulfill them, but if the courage, sacrifices, and democratic intentions of the Italian people have made them no longer applicable, the Allies had better modify them—for the sake of justice and of friendly relations in the future."

Italy has been smashed and torn and she has suffered horror and terror but Italy has not died. Her soul goes marching on and her indomitable spirit and her unquenchable thirst for freedom carry her forward. Her suffering and sacrifice have given her great spiritual strength to rebuild and reunite.

Italy wants no charity—no mere handouts—no international boondoggles. She has the right to expect that amount of relief and rehabilitation that will enable her to start anew. Recovery can only come as a result of back-breaking labor, soul-retching pain, but we must help her bind up the wounds of war. We can only do this with a sympathetic understanding. Italy will get our technology and our skill, but she needs more. She needs our kindliness. She knows she is not blameless. She knows the "moving finger writes, and having writ, moves on." She can't blot out the fact that she followed Mussolini but she is contrite and she is anxious and she is willing to redeem herself. She realizes full well that the invasions of Ethiopia, Albania and of France, blackened her escutcheon but she has paid dearly for such violence in the desolation and death that has been visited upon her. It is not my purpose to whitewash Italy but there are many facts to offset the darkened vision. It is worthy of note that thousands and thousands of Italian soldiers, driven by their intense hatred of the Nazis, came over to the Allied side, and inflicted great damage on the enemy. So did the Italian Fleet and a major part of the Italian Air Force.

According to Marshal Alexander, 250,000 Italians died in the fight for liberation. General Mark Clark, on May 11 of this year, announced that the Italian Partisan Army had liberated more than 200 towns, including Milan, Turin, Genoa, Spezia, and Venice. General Clark said he found in those cities an amazing degree of order, due to the smooth working administration of the partisans. He added that Venice had been liberated "from the interior by the armed forces of the Freedom Volunteers, with the support and encouragement of the entire population." He proclaimed "the world must have no fear that Italy cannot produce men to guide her in the future. On the contrary, there are men in Italy who are more than fit to take an active part in the reconstruction staged by the Allies."

Let no one believe that A Bell for Adano cannot be supplied by liberated Italians.

By some (even in Congress) the Italians are considered as "not quite enemies." That attitude is utterly wrong and indefensible. They are our allies now. They would be willing to fight in any theater of combat operations. Others consider Italians as victims of

fascism, who are to be freed, but who are not quite free. I counter by saying that Mussolini is dead, and the Italians have withdrawn from fascism and thrown it away as though it were a soiled and foul-smelling garment. Still others consider Italy an enemy on parole. I am convinced that she has purged herself. Her parole is ended. She has completely expiated. She vindicates our confidence in her. She is more than a cobelligerent. She must become a member of the family of Allied Nations.

It is for those reasons that I ask justice for Italy and I ask for economic aid to help her help herself.

Duck Damage to Crops

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 4, 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Duck Damage to Crops Stressed in Union Resolution," from the Bottineau Courant of May 2, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DUCK DAMAGE TO CROPS STRESSED IN UNION RESOLUTION

At a meeting of the Bottineau County Farmers Union board of directors a resolution was adopted dealing with the damage done to crops by ducks in the past year in Bottineau and McHenry Counties. This resolution is being sent to our Congressmen in Washington. The board realizes that individual letters will have more bearing on the subject in Washington than the resolution adopted by the board.

The board urges every individual farmer who realizes the damage done in the past to the crops, and the damage which may be done during the crop season of 1945 by the great increase in the population of ducks in these counties to write to your Congressmen and urge that steps be taken to control this destruction to farm crops and food production in our State.

Plans were also made for a farm meeting to be held in Bottineau pertaining to postwar planning for agriculture, according to County President V. L. Tarvestad. This meeting will be widely advertised and it is to be hoped that every farmer as well as businessman in a wide area will attend. The main speaker will be M. W. Thatcher, manager of the Grain Terminal Association. Further announcement of this meeting will be made later—watch for the dates. Talk it over with your neighbors and see that they attend.

"Resolution adopted Monday, April 23

"Whereas we believe there may be a great shortage of food in the United States and abroad in the months to come; and

"Whereas the wild duck destruction to crops in the harvest of 1944 was unbelievably heavy in Bottineau and McHenry Counties and the duck population appears to be double or more than what it was a year ago, of which many will nest here and will increase greatly by harvesttime of this year and the destruction to crops may be double or more the coming harvest: Now, therefore, be it

"Resolved, That the Federal Government take steps to control the destruction of farmers' crops by the ever-increasing wild-duck population on the wild-game reserve and the county as a whole by the abundance of water that has been dammed up, as well as the great amount of water in the marshy places and lowlands caused by the heavy rainfalls of the past few years; and be it further

"Resolved, That it is the opinion of this body, and it recommends that the season for taking ducks be opened earlier in the fall and that it continue open until April 15 in the spring and the hours be from daybreak until dark.

"V. L. TARVESTAD, *President.*
"ALDA FRASER, *Secretary."*

Memo on Hoover

REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1945

Mr. GROSS. Mr. Speaker, just about 2 years ago when I as a farmer stood here in the well of this House and called attention to the food situation and prophesied a shortage, some people laughed. It was then that I coined the phrase "Lick your platter clean." Today people are licking their platters clean not because of my advice but because of necessity. The food situation is growing more acute daily and will continue to do so regardless.

I am very happy that President Truman has seen fit to call former President Hoover to Washington and consult with him on the food situation. I am quite sure that if we had Herbert Hoover at the head of the food program and a man like Andrew Mellon in the Treasury this country would be better off and the world outlook would be brighter.

In this connection I set forth here an article entitled "Memo on Hoover," written by George E. Sokolsky. It reads as follows:

THESE DAYS
(By George E. Sokolsky)
MEMO ON HOOVER

President Truman has again exhibited a faculty to assuage ill-will and to requite injustice. His invitation to Herbert Hoover to visit him at the White House was a simple act of decency and good taste. It may turn out to be more than that, namely, a call to service, although I doubt that one visit will accomplish that much.

Mr. Hoover has been the most viciously smeared and maligned man in the whole of American history. The attacks on him were not accidental. They were the result of a planned conspiracy designed to make of a man a symbol of opposition and hate and to heap upon that symbol every possible vilification. I have studied that process in detail. I have access to the entire file of lies, falsehoods and libels. I have traced many of these foul deceits to their authors, with the astonishing discovery that among them were not always these little mosquitoes who call themselves communists nor the leftist moles, but that often the authors of the infamies were persons who had benefited while Hoover was in office and who took advantage of his apparent unpopularity to dissociate themselves from him on the "stop thief" principle of making the most noise to hide their own treacherous guilt. It has been a fascinating study in cheapness and vulgarity.

It is then an act of simple courtesy and fineness when President Truman recognizing the dignity of position invites the only living ex-President to call upon him—ending the apparent approval of the White House for the abuse of an individual for political purposes.

Until this meeting Mr. Hoover and Mr. Truman had never seen each other, and what their personalities will do at first impact is difficult to analyze. In spite of his prolonged public career, Mr. Hoover is a shy, awkward person, deeply emotional, unselfish, capable of expending himself in a righteous cause. Since 1914 his cause has been food. He believes that there is ample food for all human beings on their own level of consumption, but that the distribution of food is frightfully mismanaged, so that in time of crisis, innocent civilians, particularly children, starve. In this war that has been indisputably and tragically true.

His administration of world feeding and domestic American feeding during the last war was altogether more efficient, more able than anything produced in this war. The Food Administration of the last war makes OPA altogether ridiculous; Belgian Relief and the American Relief Administration of the last war still put UNRRA of this war in the shade.

One reason for this is that prices in World War I were based upon stabilizing prices at points nearest to the producer—that is, elevators, stockyards, creameries, milksheds, etc. Then a mark-up was established for each stage of manufacture or distribution. Prices in World War II were fixed at arbitrary levels at various outlets with subsequent adjustments. World War I methods resulted in the uninterrupted flow from farmer to consumer, required only a few hundred men for enforcement, and resulted in no black markets and no local famines. World War II methods require thousands of men and women for enforcement, require hundreds of millions in subsidies to patch up irregularities, and have resulted in local famines and black markets.

Prices in both wars had advanced considerably before the United States entered the wars, and before control of prices was established, but the increase has been greater in this war.

The total administrative expenses of the Food Administration in World War I from beginning to end, including the relief of Europe, was under $8,000,000. The expenditures during the first 19 months of World War II food agencies probably exceed $200,000,000. The Food Administration in World War I returned all appropriations of working capital intact and earned a net profit of over $60,000,000 in food operations. It paid out no subsidies. The food agencies of World War II have paid out several hundred millions of losses on food and subsidies. Thus, the Food Administration in World War I, under Hoover, cost $50,000,000 less than nothing for its 19 months, whereas the food agencies of World War II have cost several hundred millions in the same period.

Propaganda Front

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1945

Mr. FLOOD. Mr. Speaker, we have heard in this House a great many quotations from newspapermen regarding the propaganda work of OWI. There is one newspaperman who is qualified above

all others to speak on the subject of propaganda. He is Mr. William L. Shirer, the noted author of Berlin Diary, who has studied and written about propaganda for the last 3 years. I want to read to this House a few excerpts from Mr. Shirer's column Propaganda Front of May 27:

PROPAGANDA FRONT

(By William L. Shirer)

Ignominious defeat has at last silenced the poisonous voice of nazism in this world, but at the very moment of our great victory the voice of America may become silenced too, if the Congress fails to grasp what is at stake.

Washington dispatches last week told of the possibility that the House might abolish the appropriations needed by the Office of War Information to stay in business for another year. This is hardly likely, in view of the fact that the Japanese war has still to be won. But the Washington correspondents report strong sentiment in Congress to curtail greatly or even abolish the funds needed by the OWI to operate in Europe and other areas not directly connected with the Pacific war.

SILENCING VOICE OF AMERICA

This would be tantamount to silencing the voice of America over most of the globe. Maybe that is what the American people want, but I doubt it. For then the voices of Russia, of Great Britain, and perhaps of France would become dominant in the world. That may be what the Congress wants, but I doubt that, too.

It will be argued, no doubt, that the voice of America was heard mainly and appropriately of late through the roar of her guns and her bombs, which spoke a language much more articulate than that of mere words. But the same could be said of our gallant allies. Now, with the guns silent, they are substituting words and pictures. For politics, which for the last 6 years has been conducted principally by the waging of war, will now be handled by other means.

The Russians understand this when they reopen movie houses throughout the vast part of Europe which their armies occupy and show, even in Berlin, such Soviet films as Lenin in 1918, Professor Mamlock and Zoya. They understand it in their broadcasts, which are now going out over the Berlin radio and other captured stations. The British understand it by holding a great exhibition in France to show the glories of the British Army in this war. They show they know what is at stake when BBC programs suddenly come over the air from German radio stations controlled by the western Allies.

UNITED STATES MUST TELL OWN STORY

There is what we might call a Russian story and a British story to be told to the masses of this world and, as is quite natural and indeed proper, they will be told from the respective viewpoints of the two nations and the two peoples.

I believe there is an American story to be told, too. I know it will not be told by our Russian or British or French friends. If it is told at all, it will have to be told by ourselves. That is what is at stake.

There are, of course, many ways to tell it. And there are undoubtedly many sincere men in Congress who believe that the OWI is not the one to tell it. In fact, they would like to take the state out of this business and hand the matter over entirely to private enterprise. And they can advance many good arguments for their stand.

But before we abolish the OWI, with all its faults, let us remember that our British, French, and Russian friends will be telling their story in the years to come almost exclusively through state agencies. We may not like it, but that's the way it will be done. And just as diplomacy, as one means of handling foreign affairs, is a prerogative of national government, so to a considerable extent will be public relations, insofar as they have to do with furthering foreign policy and making the voices of nations heard around this world.

PRIVATE ENTERPRISE CAN HELP

There will be plenty of opportunities for our private enterprise to help, especially in the field of news agencies and radio where American talent is especially great. Certainly no American wants the voice of his country to sound stereotyped or echo the dullness of Government bureaucracy. And obviously there are many voices in America, including that of the party out of power and those of capital and labor and agriculture, which are not always in harmony. But above all this there is a synthesis that stands for the American Nation and the American people, regardless of class, party, or creed. This is what we must give voice to. And it is the burden of a democratically elected government, it seems to me, to take a responsible part in propagating that voice.

The war taught us the potential power of the new technique of propaganda and of the special role of the radio and the motion picture. But the media are not the only things to be considered. Much will depend on the wisdom of our national policies and the expertness of our diplomacy.

At San Francisco we learned how inept diplomacy could weaken and confuse the voice of America in the world. This great Republic, which still holds to the ideals of Washington and Jefferson, was temporarily maneuvered diplomatically into the utterly false position of seeming to champion Argentine fascism and seeming to be against eventual independence for the dependent peoples and seeming to be against labor being heard in the councils of the new world security organization. Actually, nothing was further from the thought of those in the government directing the present course of the Republic. But harm was done to our prestige and to the good will which we have built up in the world. And harm was done to the Allied coalition which won the war and must, in the beginning at least, keep the peace.

The voice of America faltered not because America faltered, but because of a surprising ineptness in our diplomacy and a corresponding failure to realize the consequences in terms of public relations.

RADIO'S ROLE

At the moment radio seems destined to play an important role in peacetime politics. Unfortunately, the end of the war did not bring the end of political censorship in Europe. But the radio will go over the heads of the censors. The crisis over Trieste provided an example. Allied-controlled radio stations in Italy gave Field Marshal Alexander's side of the controversy. Yugolsav stations broadcast Marshal Tito's position. There was censorship on both sides. But the radio seems to have overcome it to a considerable extent.

There are today certain countries where the facts about America, its immense contribution to the war and its sacrifices for the peace, are not very well known for reasons which we need not go into here. Some in those lands think that we ought to provide more food or fuel or transport, that we are waxing fat while they starve. Some think that we are too friendly to the Fascists, too kindly disposed toward the war criminals, or that we plan to turn on the Russians when the Japanese war is over, and so on ad absurdum.

Chiefly by radio, which will get over any local restrictions on the voice of America's being heard, we can, unless Congress decides otherwise, do a great deal to set these things and many others straight immediately. And through the turbulent years that lie just ahead, we can, if we are not blind, do a great many other things to make the voice of this great land heard.

Joint Congressional Committees to Check Executive Agencies and Bureaus—Needed in Present Food Shortage

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. PITTENGER. Mr. Speaker, I have today introduced a House joint resolution, providing for the establishment of joint congressional committees, to be assigned to each Government bureau, and keep a check on its activities, give it good advice, and report to Congress from time to time. Such committees would render great service to Congress and to the American people. Under this resolution Congress would be in touch at all times with these executive agencies, and could prevent many of them from making mistakes. I have in mind an agency such as the Office of Price Administration. The men in that bureau, responsible for the present food shortage, started in 2 or 3 years ago to adopt policies which had the necessary result of curtailing food production. They must have liked the doctrine of artificial scarcity, because that is where we find ourselves—without a meat supply. Now, a committee of Congress could have helped prevent this sad situation. This committee would be helpful to Members of Congress in many other ways. We would get direct reports from such a committee about the policy of any particular Government agency. I hope that the committee to whom this bill is referred considers it carefully and seriously.

NEW SLAUGHTERHOUSE REGULATIONS OF OPA

I discuss the good effect such legislation as I have introduced would have on the Office of Price Administration because on June 1 my attention was called to the slaughterhouse regulations promulgated in May, and which I understand became a law April 30, 1945. Now, here is a regulation that is law, and a violation subjects the person to a maximum fine of $10,000 and 2 years' imprisonment, without Congress having anything to do about it.

Now, I am not certain about the details and effect of this slaughterhouse order, but I am sure the farmers will be interested to know that the number of hogs they may slaughter for their own use will probably be determined by OPA, and they will have a quota. There are probably other features of this new order that will be more or less popular. We shall see.

COUNTY HOME FOR AGED PEOPLE AFFECTED BY ORDER

Under date of May 29, 1945, I received a letter from the county official of St. Louis County, Minn., whose office is at Duluth, Minn., and who says, in part:

DEAR MR. PITTENGER: You are familiar, I am sure, with the fact that the county welfare board operates the Cook home and the Cook farm in connection with it. It has been the practice for many years now to raise our own pork, and we have occasionally slaughtered

some beef whenever we had an animal which was of no other use.

Recently, a representative of the OPA, Mr. ——— called at the Cook farm, and stated we would have to reduce our slaughtering to 50 percent of our 1944 total. He was very gentlemanly about the whole situation, and stated that he could make no exception to our institution, and requested that we put our protest in writing.

We protested this decision of OPA because of the following facts:

1. All of the animals which we slaughtered at the Cook farm have been utilized for food at our own institutions.

2. We have given up ration points for every pound of meat which has been slaughtered.

3. Our only object in raising our own meat is to furnish meat for the institutions, and none of it is put up for sale to the general public.

4. If we do not use these animals for food for the institutions, we will quit raising them * * *.

5. We believe that if the requirements of the institutions are burdened on to the general meat supply, that such a move would serve only to accentuate the shortage of meat.

There is correspondence submitted with this protest indicating that the young men representing the Duluth, Minn., OPA office in connection with this problem were very courteous, but stated that they did not have specific regulations from Washington, D. C., which would exempt the Cook home and farm from the new slaughterhouse regulations. Thereupon the county agency wrote me to contact OPA and get an answer to their protest against the new slaughter order, so that they might continue to raise their own livestock so as to provide meat for the inmates of the homes.

Of course I am taking this up with OPA, but I have no idea when I will get an answer. This observation is based on past experience. In the meantime, I want to advise your colleagues, who will doubtless be called on for relief in identical cases of this kind.

I may add that the county official is not at all critical, but just presents his facts and asks for relief. He says in his letter to me, in part:

While we are sympathetic with the efforts of OPA in trying to alleviate this meat shortage, we fail to see where there is any possible gain if we are required to reduce our slaughtering.

Ideological Issue Seen Barring United States as British-Soviet Mediator

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. LEFEVRE. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an article appearing in this morning's New York Herald Tribune by Mark Sullivan.

Mark Sullivan brings to our attention the confusion in the minds of the people with regard to Russia. When men who have studied the situation are puzzled, we certainly cannot blame the public for being leary. I believe the majority of the American people want to understand Russia and want to be friendly with her. Americans have had enough of war, and that is the reason we are continuing wholeheartedly in every effort toward defeating Japan at the earliest possible moment. I believe that the Russian people must feel the same way about war. This transition period is difficult for Russia, even as it is for us and our ally, Great Britain. We Americans must be patient and do all that we can to persuade Russia, not Stalin alone, but also her leaders and her people, that security problems must be openly discussed so that all people may understand them, if we are to reach satisfactory agreements. The Moscow Government has much to win by maintaining a lasting friendship with our country. The time is here when an attempt by the Russians should be made to show more friendliness and more understanding of the American way of reasoning in order to boost the faith that the American people are so willing to give.

IDEOLOGICAL ISSUE SEEN BARRING UNITED STATES AS BRITISH-SOVIET MEDIATOR—MARK SULLIVAN SAYS AMERICA MUST STAND WITH BRITAIN AGAINST ANY EXTENSION OF COMMUNISM; SEES THE QUESTION ARISING IN CHINA, TOO

(By Mark Sullivan)

WASHINGTON, June 3.—Three events last week illustrate a state of the public mind and, to a larger degree, the official mind.

The House Committee on Foreign Relations, moved by "the increasing volume and complexity of world problems," and wishing to acquire more information, divided the world into five regions and itself into five subcommittees, each to study and search for information about one region. It is doubtful if such additional information as the subcommittees acquire will reduce that "volume and complexity of world problems" which already bear down on them. What is significant in this action is the puzzlement it reflects. And if the Foreign Relations Committee of the House of Representatives is puzzled, much more so is the public.

Another committee of the House, this one informal and self-created, laid before Acting Secretary of State Grew five questions. The questions show that this group of Representatives think the State Department is not as friendly toward Russia as these men think it should be. But it would be easy to find another group of Representatives who think that State Department policy toward Russia is not as firm as it should be. What this incident illustrates is cleavage of official thought. The same cleavage exists in the public mind.

TWO SIDES PRESENTED

In a discussion at Town Hall last week, broadcast by radio, two speakers took the position that we should be more tolerant and patient toward Russia. Two opponents put emphasis on actions by Russia which make patience and tolerance difficult. The significance of the event is suggested by a statement of the moderator of the meeting. He said there was more interest in this question than in any other Town Hall had discussed recently.

The Russian question is not a clear issue upon which everybody is on one side or the other. It is a tangle of many different issues. The arguments do not start from two opposed points of view but from several, many of which overlap. Some regard one consideration as paramount, others any of several different considerations. The result is not conclusion by confusion.

One large section of American thought was earnestly expressed at the Town Hall meeting by Raymond Swing. This position, as held by many Americans, may be stated in 3 sentences: If Russia and the United States get on together a future world war may be averted. If they do not get on together another world war is possible. Therefore, in all this discussion about Russia, the primary purpose should be that America and Russia get on together.

The position is sound, but does not help to solve the problem. America and Russia getting on together is prevented, for the present, by the difficulties between them, and these difficulties compose the real problem. Meanwhile, the easy assertion that Russia and America must get on together gives encouragement to what Senator La Follette the other day called the Russia-is-always-right school of thought.

NO SIMPLE SOLUTION

There is no simple solution, eagerly though statesmen seek one and the public wishes one. It is proposed that America take the role of mediator between Russia and Britain. This might be possible as to some territorial problems in Europe and Asia where Russia and Britain have interests and America has none. But beneath all lies the ideological issue. It is between democratic government, free speech, and other institutions practiced in common by America and Britain and totalitarian government practiced by Russia. About the extension of one or the other of these systems to liberated and conquered countries the United States cannot be a mediator. Of necessity it must stand with Britain.

The Russian problem and the tangle of other world problems associated with Russia will increase when and if Russia enters the war against Japan. Just as Russia in the peace settlement in Europe insists on dominance of her own interests as respects countries close to her borders, so presumably will she follow the same course in Asia. This will raise problems about the independent and territorial integrity of China even more troublesome than those about Poland and the Balkan states.

Postwar Education

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the speech delivered by Mr. Jiminie Chappell, of Union Springs, Ala., in the finals of the Alabama State oratorical contest, that is sponsored each year by the Birmingham News and Age-Herald. Jimmie is the youngest entry to ever gain the finals of this oratorical contest. His speech:

Mark Twain, the famous American writer, once said, "Education is not what you learn, it's what you unlearn."

This will be true in our postwar world.

The people of Japan are taught from earliest childhood that their Emperor is divine. They must "unlearn" this.

The people of Germany are taught that they are supermen and should be masters of the world. They must "unlearn" this.

The Mohammedans were taught that others were infidels and had to be killed. They had to "unlearn" that.

Lack of education has caused practically every war since the beginning of time.

Military leaders have taken advantage of the people's ignorance to lead them on wild schemes of conquest.

A German took advantage of his people's ignorance and started World War I.

A Mohammedan took advantage of his people's ignorance and tried to invade Europe.

Another German took advantage of his people's ignorance and plunged us into World War II.

What shall we do about ignorance in our postwar world?

The answer to this is simple—youth. The youth of the world will blow out the torch of ignorance and kindle the torch of education.

The youth of today are the citizens of tomorrow.

It will be these future citizens that will teach the ignorant people the ways of peace, democracy, and justice.

Though many of us will not be called upon to teach these ignorant people, we shall still have a great task at home. A task of keeping the world out of war by reasoning and thinking.

We have found the answer to this problem, but now we face another.

How are we to finance this great crusade against ignorance?

Our Government and other governments will have much to do in our post-war world. But we shall manage to save enough money to finance this great crusade.

With these problems disposed of, we now face the last and greatest problem of all. Will these people want education?

We see pictures of Poles and Slavs studying on crude slates in torn down buildings. They want education.

We hear of Chinese starting schools in the mountains. They want education.

But the Germans? People who have always lived under a Prussian military rule. Will they want education?

The Japanese? People who are taught that others are inferior. Will they want education?

We must make them see how great education is and how it will keep our world out of war.

One of the greatest mistakes in history was made after World War I. Instead of taking Germany in hand and showing her a peaceful world, we let her alone. Then out of the dust rose a dictator. A dictator who said, "Follow me and I will give you riches." The poor, dumb, ignorant people followed and plunged us into this great World War.

Oh, how much could have been averted if only we had educated these people. They would have been able to reason and think and resist the dictator.

The only possible way to avoid another world war is to educate the world.

In this postwar world, we cannot sit back and say, "I have nothing, let those with money educate these ignorant people."

Some of the world's greatest educators have risen from almost nothing. Take for instance, Booker T. Washington. He was but a poor Negro, born in slavery. Yet today we honor him as one of the world's greatest men.

In this postwar world, education must be so cheap that the poor as well as the rich can afford it. For if we did not, then the rich could take advantage of the poor and plunge us into more wars.

In this postwar world, we will have places only for those who work and none for those who do not. For it is the lazy people that follow the easiest path to riches and plunge us into wars.

In this world of tomorrow, we must toil and sacrifice and not sit back and watch. So as Winston Churchill says, "With hope in our hearts, a prayer on our lips, and work on our hands"—we set out on a vast crusade for education. May it succeed.

The Average American

EXTENSION OF REMARKS
OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. RAMEY. Mr. Speaker, every person is entitled to these five things:

First. A normal birth.

Second. A liberal education.

Third. A position suited to his ability and temperament.

Fourth. Security during his declining years.

Fifth. Last, and most important, recognition.

I wish to emphasize the word "recognition" and to speak about the real man, the average man. This average man has been scolded, and when I say "average man," I mean, of course, the average man and woman. He buys bonds to the limit but is never noticed in the public headlines, nor does he try to attract attention. His sons are in the fighting fronts, but he does not tell the public his boys are the only boys there. He works for his country, prays for their safe return, but does this in the closet. He is a tither and gives 10 percent of his earnings to God's Kingdom; yet he does not have his name on the envelope; he realizes that any charity with the name signed to it is not charity. He does what he can for all public functions without attracting attention. He is the average man after all—the real hero not receiving recognition. This man is truly God's nobleman.

God Almighty will not look us over for medals, worldly recognition, or acclaim, but He will look for scars. Have we suffered? Have our hearts been wounded? This average man receives no applause as he marches, no applause at the close of some statement which is sound wisdom. He does not want it. Whether in the trench, the work shop, the farm, whether a little mother caring for the household—they crave no worldly plaudits. The average man has no press agent—he avoids, rather than seeks, publicity. Whether at home, abroad, in battle, or in civilian duty, "he carries the message to Garcia." No letter to his Government is written by him asking "What about me and mine?" He just thinks, "What can I give to my God and my country?" Yet he has not only been forgotten but has been scolded. Chain speakers, chain writers, and the heads of those who are seeking publicity have created for him a most harrowing experience. He is waking up. Some day his voice will be heard.

I am attaching hereto an editorial written by a man who dares to speak and who speaks with a zeal for righteousness forged into white heat. I now have the pleasure of inserting in the CONGRESSIONAL RECORD, which I hope will be read by every student of Government in this country, as well as other countries.

THE SILENT AMERICAN SOON WILL BE HEARD

There is a man in this country who seldom speaks up. He eats, sleeps, works, votes, and pays taxes, but his voice is usually as silent as the falling of the dew. He should be the most powerful man in the country, yet he says little. He listens to others, praises what he likes and condemns what he does not like—to his limited cluster of associates, yet his voice is never heard on the floor of Congress or the State assembly. He wins our wars and pays for them. He spends sleepless nights worrying about his debts and whether he can send his son away to school. He cuts his own lawn, repairs the family vacuum cleaner, washes his car, and paints the back fence.

He is the average American.

When elections come he votes, more often at the November polls than at the primaries. He scans the ticket, puzzled over a lot of names with which he is not familiar. He does the best he can. But there is not much choice. The political parties have put up their favorite candidates. Any way he votes he turns his Government over to organized political machines. After election day he goes home to see what will happen. Nothing does, so he goes back to the shop or office and obscurity.

He is told what he can buy, how far he can drive his car, and what he can eat. When he gets his pay check the Government already has taken out a generous slice. He has read in the newspaper that the war is costing untold billions. But he does not complain. It is patriotic to pay taxes, especially for a war. His life, in spite of the freedoms he is told he enjoys, is hardly his own. There doesn't seem much he can do about it. So he keeps on working, eating what he can get, and paying his taxes.

Some day he will insist upon being all he has been told he is—a free citizen. He will insist upon his privileges being restored. He will insist upon a voice. He will break the silence. He will demand his rights—his freedoms in such a way that they cannot be disputed.

He is told before national elections that he is as important as the President when he walks into a voting booth. It makes him feel good. The day after election, he knows this is not true. It was merely political salve on his vanity.

He is getting a little tired of a government so far away running all of the small details of this every-day life. He is going to throw the whole thing out the window as soon as the Japs give up. He wants to be his own voice. And some day not too far away he is going to do it.

You know him. He is the man who sits next to you on the bus. He lives across the street. You meet him in the elevator with a last year's straw hat. He stands in line with you for cigarettes, shines his own shoes, and uses a razor blade almost a week.

His political harness is beginning to chafe. He is preparing to cut the straps and make himself known. His ancestors pitched the tea into Boston Bay in the Revolution; they fell in Gettysburg and in Cuba. He is ready to break loose and be himself again.

He is the average American.

Resolution of the Mayor and Council of Jersey Homesteads, N. J.

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. AUCHINCLOSS. Mr. Speaker, in accordance with the permission granted

me, I append herewith a set of resolutions recently adopted by the mayor and Council of the Borough of Jersey Homesteads which would change its name to Roosevelt in memory our late President. This community was founded some years ago by the Federal Government and is now operated under the control of the National Housing Agency, Federal Public Housing Authority. This proposal is most appropriate, because it was due to the efforts of the late President that the homes in this community were made possible.

BOROUGH OF JERSEY HOMESTEADS,
Jersey Homesteads, N. J.

Resolution adopted by mayor and borough council at meeting held May 14, 1945

Whereas on April 12, 1945, a war-stricken world learned with tragic suddenness of the untimely death of Franklin Delano Roosevelt, President of the United States and Commander in Chief of the armed forces of this Nation; and

Whereas this Nation and the world have lost one of its greatest leaders of all time, who had unselfishly devoted his health and his life to their cause; and

Whereas as President of this great Nation, he led this country through its most severe economic crisis and reestablished American faith in the future; and

Whereas as a result of his program for rehabilitation came about the creation of our community and many hundreds of others: Now, therefore, be it

Resolved by the mayor and Borough Council of the Borough of Jersey Homesteads, That in honor and out of respect to the memory of our great leader, Franklin Delano Roosevelt, we change the name of our borough to Roosevelt; and be it further

Resolved, That the borough clerk is hereby instructed to have this decision put on the ballot of the forthcoming election, to be held November 6, 1945; and be it further

Resolved, That the borough clerk is hereby further instructed to send copies of this resolution to the Representative of our district, the Honorable JAMES C. AUCHINCLOSS, and to the Senators of our State, the Honorable ALBERT W. HAWKES and the Honorable H. ALEXANDER SMITH.

Approved:

JACOB N. REARSON,
Mayor.

Attest:

JEANNE G. REARSON,
Borough Clerk.

Immigration Bars To Be Let Down by Letting in Products of Sweated Foreign Labor

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following statement of Harry H. Cook, of Toledo, Ohio, international president, American Flint Glass Workers' Union of North America, affiliated with the American Federation of Labor, before the Senate Finance Committee, June 1, 1945:

Mr. Chairman and members of the committee, those demanding the continuance in their hands of the power to destroy American industries, to transfer the jobs of America's workers to workers in other countries, especially the jobs of those workers in industries where labor costs represent a high percentage of the total costs, seemingly act Hitler-like in that the more often they repeat a statement, irrespective of its accuracy, the more people will believe it.

CLAYTON CLAIMS UNTRUE

Secretary Clayton represented to your committe, I quote, "No single American industry can show that it has been seriously injured."

Speaking for and on behalf of the officers and members of the American Flint Glass Workers Union, affiliated with the American Federation of Labor, I want this committee to know that that statement is wholly untrue. Further, the State Department has admitted, by its own actions in canceling or suspending the trade agreement with Czechoslovakia, its knowledge that such a statement is wholly untrue. In addition, the Ways and Means Committee recommended and the House of Representatives, in adopting the pending legislation with the proviso that the Czechoslovakia trade agreement could not be reinstated, bore witness to the falsity of the statement that "no single American industry can show that it has been seriously injured."

The Czechoslovakian trade agreement was the only trade agreement entered into with a foreign country, which country was overrun by the Nazis, which trade agreement has been suspended or canceled.

The State Department has made trade agreements with France, with Belgium, with Holland, with Finland, which countries have been overrun and occupied by the Nazis. None of these trade agreements were canceled or suspended. Why?

The only trade agreement affected by the unusual action of the Ways and Means Committee, and by the action of the House of Representatives, was the trade agreement we had entered into with Czechoslovakia.

In view of these undisputable facts, so well known to those in the State Department actually in charge of trade agreements, we feel that the members of this committee, and of the Senate, are warranted in most carefully weighing the value of unsupported assertions presented by those who, solely through this unusual power placed in their control, become for the moment important in our economic life.

Of course, members of this committee may have noted from answers you may have received from Secretary Clayton that he may not be aware of the actual facts or the real history of the trade agreements.

When questioned by members of the Ways and Means Committee I noted that he invariably stated that he did not know because he had only been in the Department for a period of a few months.

TARIFF COMMISSION REPORTS COMPETITIVE ADVANTAGE OF FOREIGN COUNTRIES

We state to your committee without the slightest hesitancy, that the concessions made by the State Department officials in the trade agreement we entered into with Czechoslovakia seriously injured our industry and transferred the jobs of hundreds of our workers to the lower paid workers of Czechoslovakia.

The United States Tariff Commission, in its report to the Senate, April 1945, page 2–59, states, referring to handmade glassware, "Methods of production are much the same in the several producing countries and the high proportion of hand work required gives competitive advantage to countries with low wage levels."

The same report, same page, also states that imports of hand-made glassware represented 15 percent to 30 percent of United States consumption value, and that imports in 1939 represented 25 percent of the United States consumption of hand-made glassware for that year.

IMPORTS WHICH CONTROL 25 PERCENT OF AMERICAN MARKET NOT NEGLIGIBLE

Further, the United States Tariff Commission, in this same report, same page, states, "Because of the increase in United States demand and the decline in imports, domestic production—jobs—increased in value from less than $12,000,000 in 1939 to more than $19,000,000 in 1941, the latest available estimate. This was possible without expansion of the capacity of the industry because much of the existing capacity was not previously in use."

Is it fair to say that from 15 percent to 30 percent of the American market represents what Secretary Clayton often refers to as negligible imports?

It is evident to us that if this legislation is extended that in some other trade agreement, either with Czechoslovakia or some other glass-producing country, our industry and our jobs will be faced with a reduction of tariff rates which will leave us with tariff protection of not more than 30 percent to offset what the Tariff Commission reported to the Senate of the United States "the competitive advantage to countries with lower wage levels."

COUNTRY ON NOTICE TARIFF RATES TO BE REDUCED TO 30 PERCENT

Mr. Chairman and members of the committee, Secretary Clayton has placed the Congress and the American people on notice of what he intends to do not with some certain industries but with all American industries, the products of which compete in the American market with products of other countries, if and when you delegate to him the power which this legislation will confer upon him.

I did not personally hear Secretary Clayton's presentation to this committee. However, I have a copy of the statement handed out and I wish to quote two paragraphs which prove what I said.

On page 3 of his statement I note he said, "No one familiar with the exorbitant rates in the Smoot-Hawley bill, many of them running over 100 percent, can deny that tariff adjustment, selectively and carefully made, is called for." Then, he added, "At the time the Trade Agreements Act went into effect, 11 years ago, the average rate of duty on dutiable imports under the Smoot-Hawley bill was about 50 percent."

Secretary Clayton has publicly stated to the Congress that he believes that average tariff rates of 27 or 28 or 30 percent are fairly high.

In response to a question of Congressman SIMPSON, Secretary Clayton, when he appeared before the Ways and Means Committee, stated, as shown on page 341, "I think an average tariff of 27 or 28 or 30 percent is fairly high."

In addition, Secretary Clayton has publicly told this committee why he wanted tariff rates reduced to 27 or 28 or 30 percent.

Secretary Clayton refers to the tariff rates in the Smoot-Hawley Act as exorbitant. He also states that rates of 30 percent are fairly high. No reference is made to whether or not these fairly high tariff rates of 30 percent will equalize the difference in production costs. No reference is made or interest shown in the fact that the foreign produced competitive glass tableware articles, product of workers in foreign countries at less than our costs of production, are sold to American retail consumers on basis of American costs.

Secretary Clayton is officially and publicly aware that the Maritime Commission has definitely found that the difference in production costs, American and foreign, are 100 percent higher in America. When asked

about this situation at Ways and Means Committee hearings he raised no objections thereto.

Why should America's workers, dependent on the sale of glass tableware in American markets, be limited to a production differential of, say, 30 percent—tariff rates—and other American workers allowed a differential—tariff equivalent—of 100 percent over foreign costs?

In all fairness, why should the Senators and Congressmen from glass-production States and districts permit such discrimination to be continued?

Throughout his presentation before this committee you will note that he wants the value of our mechanized exports, as well as our loans in foreign countries, invested in production plants in those foreign countries, and insists that "if we fail to adopt the tariff policy which this bill embodies, we cannot expect to receive the returns that will be due us on the large foreign loans which we shall inevitably make during the reconstruction period" (p. 7).

NO CITATION OF FOREIGN TRADE BARRIERS REDUCED

In addition he stated (p. 2): "Now, for the debtor countries to pay the interest and dividends on such investments and continue to buy our goods, it is absolutely essential that trade discrimination be eliminated and that excessive barriers to the international movement of goods, such as tariff—in excess of 27 or 28 or 30 percent—quotas, etc., be substantially lowered."

I have read the hearings before the Ways and Means Committee, and so far as I have been able to learn no presentation or citation has been made by any of those who seek the continuity and expansion of the power which the Constitution delegated only to the Congress of any trade barriers, or quotas actually filled, which have been placed in actual effect by any of the foreign governments as a result of the concessions we made, which reduced our average tariff rates from 50 percent to 35 percent.

Mr. Chairman, the people of the United States, the Congress of the United States are on notice of what is going to happen to those workers who are dependent for their means of livelihood on those American industries where the difference in production costs of American-made goods exceeds more than 30 percent of competitive foreign-made goods.

CZECHOSLOVAKIAN TRADE TREATY CLOSED GLASSWARE PLANTS

We do not know what other Americans are going to do. We faced the same situation in 1938 when, as a result of the reduction of the tariff rates on glassware from 60 percent to 30 percent the jobs of our workers were literally transferred to lower paid glassware workers in Czechoslovakia. We instituted a Nation-wide boycott of foreign-made goods.

We are satisfied that as a result of the agitation and the education we promoted that we saved the jobs of our members, and finally, when the excuse presented itself, the State Department lost no time in canceling the trade agreement which made necessary the boycott campaign which we had instituted.

We have made our appeal to the elected representatives of the American people. We have presented our case to the members of the Ways and Means Committee and to the members of the Senate Finance Committee. Failing to secure proper redress and protection we have no hesitancy in placing our case before the American people.

GLASSWARE WORKERS WANT JOBS—NOT CHARITY

There are about 10,000 members of our international union serving in the armed forces, in addition to many others who are sons or sons-in-law of our members. Many of these will not return as they have already sacrified their lives that we might preserve what some call freedom in the United States. The possession of freedom or liberty, dependent on some relief roll or the charity of one's friends is not what our members in the armed forces sacrificed their lives for. When they went away we all, employers and representatives of the employees, promised that their jobs would be there for them on their return. We know that with tariff rates of 30 percent there will be no profitable jobs for them.

Others will return too crippled to take their places in any industry. Our organization, to a man, will not hesitate to take such measures as we deem necessary and helpful to assure our returning members, who served in the armed forces, and, those who carried on as soldiers in the production lines, of their rights to a job in an American glass tableware industry at decent wages and under decent conditions of employment.

RESPONSIBILITY THAT OF CONGRESS—NOT OF THE PRESIDENT

Mr. Chairman and members of the committee, in closing I wish to impress upon you that the duties of the President of the United States are such, especially in these days, that he is dependent upon the advice and the recommendations which he receives from those he entrusts with or delegates responsibility to. In this case it is not the responsibility of the President. The Constitution of the United States entrusts to the Congress of the United States the raising of revenues. When you, for any reason, see fit to delegate your responsibilities to some unnamed and unknown persons the responsibility is not that of the President of the United States; it is yours.

Succession to the Presidency

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Columbus Dispatch, dated May 11, and an article from the Columbus Citizen, dated May 15, 1945:

[From the Columbus (Ohio) Dispatch of May 11, 1945]

WHITE HOUSE SHIFT EMPHASIZES FLAWS IN PRESENT SYSTEM

(By Elmer P. Fries)

Under existing provisions relating to Presidential succession it is possible for a Chief Executive of the Republic to be a man upon whom the voters never have passed judgment at the polls. And a Vice President who becomes President is in a position to pick his possible successor without reference to the electorate. These important but seldom noted flaws of our Federal Government system were pointed out by James A. Farley to a chamber of commerce meeting in Pennsylvania the other night.

And the former Postmaster General, who knows both history and politics through diligent study as well as long experience, contributed a constructive suggestion for doing something about various aspects of the matter of succession which present laws do not cover.

Mr. Farley's discussion was based on the elevation of Harry S. Truman to the White House office through Mr. Roosevelt's death—the seventh instance in history in which a Vice President has thus taken over.

He told his audience in part: "Under the Constitution, of course, the Vice President succeeds in the event of death, removal, resignation, or inability to perform Presidential duties. And under the same paragraph of the Constitution, the Congress may by law provide for the situation that would be presented if a succeeding Vice President likewise were to be removed, to die, to resign, or to become incapacitated.

"The present statute in this respect was enacted in 1886 and provides that the Secretary of State is next in succession, and after him in series the Secretary of the Treasury, the Secretary of War, the Attorney General, the Postmaster General, the Secretary of the Navy, and finally the Secretary of the Interior—in short for a cabinet succession based upon seniority among the Departments.

"But this raises a question. Under our present method, a Vice President who succeeds to the Presidency is in the unique position of being able to choose his own successor without reference to the electorate.

"The first in line, as I have remarked, is the Secretary of State, whom he appoints subject only to Senate confirmation. This possible short-circuiting of the electorate is a gap in our democratic procedure that we have not yet solved. There are other aspects to the problem of succession which never have been worked out by law."

One of the latter, Mr. Farley explained, is the possible creation of a complicated situation in Congress which presumably has the power to name a President and Vice President if both persons elected to those offices should die before being inaugurated.

A congressional deadlock due to party divisions conceivably could result in much delay and confusion which would leave the country without a President for a period.

The remedy, as Mr. Farley sees it, lies in setting up a special commission on which the Senate and House would be represented, with one or more other Members appointed by the President and perhaps one Supreme Court Justice selected by the Chief Justice.

This commission would make recommendations clarifying the various problems relating to Presidential succession. These might include a constitutional amendment or merely legislation.

And Mr. Farley holds, with sound reasoning, the importance of devising proper action warrants immediate study by an eminently qualified group such as he proposes.

[From the Columbus (Ohio) Citizen of May 15, 1945]

NOW IS THE TIME

Representative MIKE MONRONEY of Oklahoma says he will soon introduce a bill to authorize study by a special commission of the question of succession to the Presidency. James A. Farley advocated the same idea the other day.

When, as now, a Vice President has succeeded a President, the man next in line is the Secretary of State, with a number of other Cabinet members following him. Maybe that's the best possible arrangement; maybe not. Whether there could be a better arrangement is worth considering.

And, as Mr. MONRONEY says, there are many blind spots and ambiguities in the present system. Various contingencies that might arise, and for which the Constitution and the laws do not provide, could create grave doubt as to who should become President, or whether there is anyone legally qualified to become President. None of these contingencies has arisen in 156 years, but that's no guaranty that none ever will.

We agree with Messrs. Farley and MONRONEY that now is the time for a nonpolitical commission to study the whole subject and recommend such improvement in the Presidential succession system as may be found desirable.

Memorial Day Address of Hon. Fred M. Vinson

EXTENSION OF REMARKS
OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by War Mobilization Director Fred M. Vinson at Arlington National Cemetery on Memorial Day:

Memorial Day marks, always, a solemn pause in each year of our Republic's life. Here, at Arlington National Cemetery, we gather once more to pay what honor we can in words and by observance to the men who have served our Nation to the end of their capacity. We are humble in the presence of these dead.

This is the one hundred and sixty-ninth year of our Republic. Once more, the heirs of America's freedom are proving in battle that our liberal tradition breeds fighting men. Great victories have been won; final triumph will be achieved. But the cost is heavy. Here, looking about us at the marble and granite which marks the resting places of our heroes, we can count in some degree, the cost of our freedom.

There are many other dead who do not lie here, whose bodies rest beneath foreign soil: In France, and Italy, and Germany, in Africa, and on far-off islands of the Pacific, Iwo Jima and Tarawa, and Okinawa. There are others whose bodies have been consigned to the seas; who have fallen from the skies to nameless graves. We have lost many men, many, many sons, and husbands, brothers, and lovers. We have lost also our great leader, in the cause of human justice and freedom, Franklin Delano Roosevelt.

We mourn these men, soldiers and sailors, and warriors of the sky. But in our Nation, grief gives us always greater resolution. We go on, with stronger armies, with new leaders. Our trial is not over. Here at home, we labor unceasingly, and will labor harder. Overseas, we fight more strongly, and with greater determination now that one of the enemies of freedom has been crushed. It is our tradition in America that we count no cost too great if it will secure to us, and to the world, the freedom of men.

We have struck a strong blow against tyranny in Europe. We have wiped out the armies and we are expunging the leaders of fascism and nazism. The war criminals who have not destroyed themselves at the threat of retribution will be brought to the bar of international justice for judgment. We have set ourselves the task of making sure that these nations who once proclaimed themselves masters of the world shall learn the error of their ways. We will make sure that they have not the power again to strike us in the back. They must begin now to learn how to live in a civilized world. They must answer to justice for the crimes they have committed; for the damage they have caused. Then, and only then, will the United Nations permit them once more to earn their way back into the fellowship of men of good will.

While we perform this necessary task of cleansing Germany, we are striking fresher and stronger blows against tyranny in the Pacific. Crippling damage has been done to the Japanese Fleet, and to the Japanese merchant marine. Our planes are driving home to the Japanese the truth that democratic nations are always stronger than despotism. Our soldiers and our fleet have smashed through Japan's outer defenses and brought us to the very doorstep of the home islands. Yes, these are great victories and point the way to the ultimate triumph. We are proud of these achievements.

It is a tragic thing that men must die because of the evil that other men do. It is tragic that evil is allowed to take root and flourish until only the savagery of war can tear it out. There is another way, and we must find it.

These wars that destroy treasure and manhood do not "just happen." Let us once and for all root out of our thinking the idea that wars are beyond control. Wars are not "acts of God." They are caused by man, by man-made institutions, by the way in which man has organized his society. What man has made, man can change. We can alter the shape of things so that war is no longer an ever-constant threat. It is within our power, as man, as members of the United Nations to accomplish this. It will not be easy, but the homage we pay our dead here today will be a mockery unless we use to the utmost the opportunity for which they fought and died.

We of the United Nations can do this, because the future of the world is in the hands of mankind. We must do this because mankind must progress and grow. We will do this because it is mankind's destiny to live in peace, and liberty, and brotherhood upon earth.

What are the means by which we may accomplish the quarantine against wars? The means are not simple to find, nor are they easy to put into operation. Yet ways must be found: The world must work together. The separate nations of the world must not only be willing that brother nations should have economic security, but they also should assist each other to attain it. There must be a method for working in concert, with force if necessary, to put down those who seek by violence to attain selfish and anti-social ends.

At Dumbarton Oaks and at Yalta and at San Francisco, we of the United Nations have been shaping machinery intended to prevent aggressions. We have been blocking out the systems and the methods by which men and nations can come to a peaceful solution of their differences. We are seeking to substitute debate, discussion, compromise, and legislation for the horror of modern war.

We are making progress. It is a healthy thing that the problems of the world are being decided, with all the world listening in. This is not secret diplomacy such as marked the end of the last war. This is the modern, democratic way of working, free debate in the open. Through these means, we are shaping the constitutions of the United Nations.

I think that, no matter how great the difficulties of the moment may seem, the San Francisco Conference, and other international conferences, will succeed. They will, because the people of the world have demanded it.

Solid measures are also being forged in the Congress of the United States and in the parliaments and assemblies of the United Nations to serve the cause of world cooperation.

The United Nations confront two main problems: the suppression of aggression and the assurance of a full flow of trade among nations. It is equally important that we are applying to the task of peace the cooperation that we learned in the hard school of war. We are determined to eliminate the causes of war. We cannot evade this responsibility. The world looks to us for leadership, and we are accepting the role.

America has never wished for war. Yet there are things dearer than peace—and so, sometimes we do go to war. What are these things dearer than peace? What is it that makes American men willing to die in fields and seas and skies of battle?

They are simple things, as our men, as all men everywhere are simple in their hearts: security of their homes and loved ones; the opportunity to work, to achieve, to grow in a land free from the tyranny of little men greedy for power.

Yes; these are simple things. But their attainment is not simple. The Declaration of Independence is a living document that was born in strife and whose fulfillment has required, and still requires, the selfless devotion of generations of men. The "four freedoms" of men have been proclaimed. They are being born in battles more savage, more demanding of courage than the framers of our independence could ever have imagined. We are setting about the fulfillment of those freedoms.

A job for every man and woman who wants to work would constitute a good beginning to the fulfillment of the "four freedoms," and to the prevention of war. Our country has more than attained this goal during the war.

We have glimpsed a treasure of prosperity beyond anything this Nation, or the world, has ever known—by providing a multitude of jobs. But there is something wrong when such standards of living can be attained only by producing for war. There is something wrong with us, with the systems of mankind that have caused war.

There will be something wrong with mankind, too, if we allow wars and depressions to return with clocklike regularity as of old. Depressions, like wars, are not acts of God. Man makes them. If we make them, we can unmake them. We must create, in peace, a new prosperity and a greater opportunity for jobs than has existed before.

A difficult task? Of course it is. But during the last 5 years, America has accomplished many difficult tasks. In 5 years, we have doubled our national production. We have piled an entire war economy on top of a civilian economy already operating at what, a few years before, some would have considered an impossible peak of nearly $100,000,000,000.

We are a nation of prodigious accomplishment, and we can do this job, too. Our efforts in this war have opened our own eyes to the tremendous production which American labor and the American genius for management and organization can accomplish as a team. But this record, this vast number of jobs, has been attained through the establishment of an unlimited market by the Government's purchases for war. The change to peacetime production and employment, on a similar scale, will call once more upon the genius of all of us, upon business and agriculture, labor and management, State, local, and Federal Governments to create new peacetime markets to take the place of war-born demands.

We have the means to produce a standard of living far higher than any we have ever known. We are rich in resources, in manufacturing facilities, and in manpower and the know-how of management.

If the ceiling of our production seems almost unlimited the needs of our people are also great. Our needs, plus those of the war-blighted lands overseas, are so various and so great that they challenge the production capacity of even the greatest industrial nation on earth. Yes; the needs are great, but needs do not constitute the means. The people of the United States must have steady income, and must feel sufficiently secure to want to spend that income, before the people become customers for all their needs.

This is the real challenge to America. We know we can produce what people need and what people want. We know that our system of distribution can get the goods to them. But the creation of steady pay presents the test of the genius of our business management, large and small. They must actuate demand by expanding their business,

offering better services and better goods at fair prices. Labor and agriculture can increase man-hour production and thus make an important contribution to higher incomes and higher standards of living.

Government, too, has its responsibility and it is a large one. Business, labor, and agriculture cannot alone assure the maintenance of high levels of production and employment. The Government, acting on behalf of all the people, must be responsible for broad economic policies. Their purpose should be to promote and encourage the expansion of business, and to broaden markets, to support consumer spending.

The way to this goal, like the way to enduring world peace, lies through the joint work of all of us, through the genius of all of us; through the spirit of mankind. What can be done here at home will be done. The leaders of America, in every walk of life, will work individually and collectively. Where Government can help, it will. But the task is, first and foremost, the job of every one of us; of everyone within the reach of my voice; of every living man and woman of America and in the world. We living owe it to those who have died. We owe it to those who will return. They are fighting to get the job done, to get home and to pick up the task, the happiness, of living. What we, and they, do now and in the future will be the measure of whether or not we who live have fulfilled our duty to those who die.

I have called this a solemn pause in the year, a pause to honor those who have served our Nation to the death. Let us also pay them the tribute of searching our own hearts to see what service we can perform, what duty we owe to the dead and to the living. Let our actions today confirm to the hearts of our fighting men the fact that we know why they are fighting. Let them see that we are planning together, laboring together, acting together to wipe out the causes of future conflict, and to guarantee to common men everywhere the freedom to live and work in peace, in harmony with their brothers.

This is the least that we can do; to bring about the realization and the fulfillment of freedom for the world—for which all of us have fought, and some of us have died. Only in this way can we truly honor our dead.

God care for the hero dead and all who fight to preserve the rights for which they died.

The Friant-Kern Canal

EXTENSION OF REMARKS
OF

HON. ALFRED J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. ELLIOTT. Mr. Speaker, time and again you have heard me address the House on the subject of the importance of the Friant-Kern canal, the most necessary and vital irrigation unit of the Central Valley project, and the need for which justified that project from its very inception.

Since 1939, when construction of the great Friant Dam was started, I have urged and pleaded that construction of this great irrigation canal be commenced and carried on to completion without delay. Year after year since that time I have never ceased my efforts to bring about the start of work on building this project.

When the clouds of war first darkened the horizon, I submitted facts and figures to show the tremendous food production that the water this canal would bring to our thirsty lands would produce. My congressional district, comprising the counties of Kern, Tulare, and Kings, is undoubtedly the highest ranking agricultural area in the value of its products that exists anywhere. The value of its agricultural crops last year exceeded $300,000,000. The waters that this great canal will carry are necessary to maintain this production and protect the huge investment in orchards, vineyards, and farms of all kinds from utter ruin, should another drought cycle occur. It is imperative that this canal be built as speedily as possible, for dry years in this area can occur with frequency and no one can predict what the future holds for us in the way of rain and snow and weather.

Again and again I have gone to the officials of the Bureau of Reclamation and urged them to expedite getting the work under way. I have testified again and again before the Appropriations Committee of the House and Senate, asking them to make funds available for the work.

In 1941 the Reclamation Bureau did advertise for bids to construct the first unit of the project, only to cancel them as the country became involved in war. As time passed on and the need for food became acute and apparent to the whole world, I again submitted the possibilities for increased food production that the construction of this Friant-Kern canal would make possible. Very comprehensive data were prepared, to show in detail what the building of the canal would produce. I submitted these data to the War Food Administration, the Bureau of Reclamation, and the War Production Board. Hearing after hearing was held by various committees and agencies of the War Production Board. The project was endorsed and recommended by the War Food Administrator, whose knowledge of the great productivity of the lands under this canal caused him to give enthusiastic support to the canal program.

The Bureau of Reclamation awoke from its apathy and indolent attitude toward the irrigation features of this huge project and evidenced a desire to get construction under way. They promised to build the canal in 2 years if given the opportunity, for they, too, realized the tremendous increased production of foodstuffs that its completion would bring.

The War Manpower Commission gave its blessing to commence the undertaking. However, the War Production Board would not give its approval. Without any doubt, the most incompetent consideration was given this canal project by some of the WPB committees. It would have been looked upon as a comedy of errors if it had not been so tragic.

If the canal had been started in 1939 when the Friant Dam construction began, millions of tons of foodstuffs would have been produced from the waters that have wasted to the sea through lack of a conduit to carry it to the farmlands. If the canal had been started in 1942 or 1943, the waters this year would be growing a million new tons of foodstuffs. Some of our food shortage can be directly traced to the lack of diligence and foresight of a few of our governmental agencies that should have known better.

Here I wish to pay a tribute to my colleagues in Congress. Again and again I have been the only Congressman to appear before the Appropriations Committee to ask for funds to implement the construction program on our irrigation canals. In spite of the fact that we have had no power shortage at any time in this area, while all the time we have had a water shortage, a food shortage, and increased power loads and costs due to having to pump the water from an ever increasing depth, I have been the only Congressman to plead for funds and construction of the canal that would bring the water to the lands that need it so desperately.

The members of the House Appropriations Committee, most of whom had taken the time to come to California and see this great Central Valley project, see at first hand the marvelous productivity of its lands, see the water wasting to the sea, see the plight of the farmers suffering from a water table that had dropped out of economic reach, and see the majestic Friant Dam serving only as a roosting place for birds, with wisdom and understanding appropriated funds to commence the construction of the Friant-Kern canal. They even earmarked the funds to make certain that money would be available at any time a clearance could be obtained for the construction program.

I am grateful to them and so are the people of California who have prayed and worked for this water project for 25 long years. We are grateful, too, to the Members of the House who have supported this program and who have approved the appropriations made available by the members of the committee. I assure you that your faith and confidence in this irrigation works will be justified a thousandfold once the waters are brought to the lands.

Today I am happy to report that on last Saturday afternoon, June 2, the War Production Board approved the construction of the first unit of the canal and the excavation of its entire length of 160 miles. This decision was reached after I had conferred with J. A. Krug, Director of the WPB, and members of his staff. Their consideration and understanding of the importance of this irrigation canal reflects great credit upon their administration of the functions of the War Production Board.

Commissioner Bashore, of the Bureau of Reclamation, has promised energetic action to see that work gets under way, and I am confident that under his able guidance we shall see work underway before the end of this summer.

On behalf of the people of this great valley, I wish to thank everyone who has assisted in bringing this matter about.

Pledge to the Flag

EXTENSION OF REMARKS
OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the United States Flag Association, national headquarters, Washington, D. C.:

AUTHORSHIP OF PLEDGE TO THE FLAG

The original pledge to the flag read as follows:

"I pledge allegiance to my flag and[1] the Republic for which it stands; one Nation indivisible, with liberty and justice for all."

MODIFICATION OF PLEDGE

At the First National Flag Conference held in Washington, which was attended by eighty-some-odd delegates from patriotic societies, fraternal orders, civic bodies, and other organizations, the Pledge to the Flag was modified to read:

"I pledge allegiance to the flag of the United States and to the Republic for which it stands; one Nation indivisible, with liberty and justice for all."

FURTHER MODIFIED

The Second National Flag Conference held in Washington on Flag Day, 1924, further modified the Pledge to the Flag to read as follows:

"I pledge allegiance to the flag of the United States of America and the Republic for which it stands; one Nation indivisible, with liberty and justice for all."

CONFLICTING CLAIMS OF AUTHORSHIP

For several years the family of Francis Bellamy and that of James B. Upham have each claimed for these men the authorship of the original pledge to the flag. At the time the pledge was written both Mr. Bellamy and Mr. Upham were connected with Youth's Companion.

APPOINTMENT OF COMMITTEE TO DETERMINE AUTHORSHIP

To determine, in the interest of historical accuracy and certainty, the authorship of the original pledge to the flag, the United States Flag Association appointed a committee consisting of Charles C. Tansill, professor of American history, Fordham University, chairman; W. Reed West, professor of political science, George Washington University; and Bernard Mayo, professor of American history, Georgetown University. All three of these university professors have had long experience in research work, in which they are known to be experts of a high order.

FINDING OF COMMITTEE

After carefully and impartially weighing all evidence submitted by the two contending families of Francis Bellamy and James B. Upham, the committee unanimously decided that to Francis Bellamy unquestionably belongs the honor and distinction of being the author of the original pledge to the flag.

The report of the committee, which was submitted to, and approved by, national headquarters of the United States Flag Association, May 18, 1939, is given below in full.

REPORT

After a careful examination of all the data submitted by the Upham and the Bellamy families, the committee of historians appointed by the United States Flag Association has come to the unanimous conclusion that the credit for the authorship of the pledge of allegiance to the American flag belongs entirely to Mr. Francis Bellamy, of Rome, N. Y. The data submitted by Mr. David Bellamy in defense of his father's claims to the authorship of the pledge are especially significant.

On February 17, 1892, the department of superintendence of the National Education Association adopted a resolution to perfect plans for a national Columbian public school celebration to be held on October 21, 1892. In order to carry out these plans, the association arranged for the appointment of an executive committee of five persons, with Francis Bellamy, of the Youth's Companion staff, as the chairman. From the extensive literature issued from the headquarters of this committee, it is apparent that Francis Bellamy played an outstanding role in making a success of this national Columbian public school celebration. Not only did he carry on a voluminous correspondence with leading educators in the United States, but he also kept in close contact with the American press and with men who were prominent in public life. For the official program of the national Columbian public school celebration, Mr. Bellamy wrote the formal address in easy and fluent language, and its smooth cadence bears some resemblance to the phraseology of the pledge of allegiance.

In three long affidavits, dated August 13, August 30, and September 1, 1923, Mr. Bellamy gives an intimate picture of the background of the pledge of allegiance. These affidavits are clearly and cogently written and bear the unmistakable stamp of verity. In this connection it should be kept in mind that Mr. Bellamy had served many years as minister in the Baptist Church before entering upon his duties as a member of the editorial staff of the Youth's Companion. There seems to be no good reason to doubt the authenticity of the statements that he makes in these affidavits, and the fact of his clerical connection gives added weight to his testimony.

In the three affidavits there is a detailed account of the events leading up to the actual writing of the pledge of allegiance. There is also a statement which explains the evolution of the phraseology of the pledge. In this regard it is important to note that Mr. James B. Upham did not write any statement asserting his authorship to the pledge. The claim that he was the author of this 23-word salute to the American flag rests almost entirely upon the testimony of members of his family and upon statements made by members of the staff of the Youth's Companion. It is pertinent to note that the evidence in favor of Mr. Upham as the author of the pledge of allegiance is of comparatively recent origin and has come to light since his death in 1905.

In addition to the affidavits of Francis Bellamy with reference to the authorship of the pledge, there are additional data which support the Bellamy claim. In the Bellamy scrapbook there are two drafts of the pledge in the handwriting of Mr Bellamy. Just when these drafts were written it is impossible to detemine. There is also in the Bellamy scrapbook a page from the Youth's Companion of September 8, 1892, in which the program of the Columbus Day celebration is given in full. In the handwriting of Mr. Bellamy there is a notation alongside of the pledge of allegiance and of the address to the effect that Francis Bellamy is the author of both pieces.

It is very true that these notations could have been made some time subsequent to September or October of 1892, and it is equally true that the drafts of the pledge of allegiance in the handwriting of Mr. Bellamy may have been mere exercises in penmanship. The fact remains, however, that the links in the chain of Bellamy evidence are numerous and well-fitting and cannot be lightly disregarded.

The American Flag Manufacturing Co., of Easton, Pa., presumably in 1893 or 1894, published a small pamphlet entitled "A Ritual for Teaching Patriotism in the Public Schools." In this pamphlet there are detailed directions for the holding of a ceremony for honoring the American flag and the pledge of allegiance is printed in full. There are two salutes to the American flag published in the pamphlet, and the ritual that accompanies the holding of these salutes is explained by George T. Balch and by Francis Bellamy. The fact that Mr. Bellamy was chosen to write the ritual that was later associated with his name is a fact that cannot be overlooked.

Shortly after the appearance of this pamphlet, Mrs. Lue Stuart Wadsworth, a member of the national committee of the Woman's Relief Corps on Patriotic Teaching in the Public Schools, paid a visit to the office of the Youth's Companion to ascertain if that publication would print and distribute some copies of the so-called Bellamy salute for the children of the public schools. During the course of a conversation with Mrs. Wadsworth, Mr. James D. Upham remarked: "While Francis Bellamy wrote that salute, it should never have been published under his name, as he was in our employ."

During the session of the Twelfth National Convention of the Women's Relief Corps, Auxiliary to the Grand Army of the Republic, September 11, 1894, Mrs. Wadsworth brought to the attention of the convention the Bellamy salute to the American flag.

In the fall of 1894, therefore the pledge of allegiance was widely known as the Bellamy salute, and in the Acme Haversack of Patriotism and Song, published in Syracuse, N. Y., in March 1895, the pledge of allegiance is frankly credited to Francis Bellamy.

In view of this strong contemporary evidence it is the opinion of the members of this committee that the author of the pledge of allegiance to the American flag was Francis Bellamy, of Rome, N. Y., and not James B. Upham, of Malden, Mass.

Before concluding this report the committee wishes briefly to discuss the basis of the claim that James B. Upham was the author of the pledge. This claim is based upon a series of letters and affidavits from members of the Upham family and from friends and associates of Mr. Upham. Letters from former members of the editorial staff of the Youth's Companion like Charles M. Thompson, Edward W. Frentz, Henry S. Chapman, and Ira R. Kent are strongly in favor of the view that James B. Upham was the author of the pledge of allegiance. They also indicate the sterling character of Mr. Upham and the credit that rightly belongs to him for his share in making the Columbian celebration such a conspicuous success. But these letters were written many years after his death, and they are balanced by letters written by Mr. Bellamy by other members of the staff of the Youth's Companion (Harold Roberts, LeRoy Phillips, and Mrs. H. Underhau), who were convinced that Francis Bellamy wrote the pledge.

Because of the conflicting evidence in the letters from former members of the staff of the Youth's Companion, the committee inclines toward the view that the contemporary evidence adduced by Mr. Bellamy in support of his father's claim has unusual weight. After surveying every aspect of the question of the authorship of the pledge, the committee is of the opinion that Francis Bellamy wrote the pledge of allegiance to the American flag in the form in which that salute is reproduced on the program of the National Columbian public school celebration as printed in the Youth's Companion, September 8, 1892: "I pledge allegiance to

[1] In later versions "to" was added after "and."

my flag and[2] the Republic for which it stands: one Nation indivisible, with liberty and justice for all."

Aviation Development Will Help Furnish Jobs in Postwar Unemployment

EXTENSION OF REMARKS
OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. PITTENGER. Mr. Speaker, there is already evidence of unemployment problems following VE-day on May 8, with the curtailment in production in war industries. This might indicate that some of our administrative Government agencies have not been on the job. There has been a lot of talk about postwar planning in some of our executive departments. I hope some of it has been more than talk. I fear for the worst, however.

In this connection I want to call to the attention of the Members of the House one item of aviation development that would furnish employment to a large number of people. I refer to many uncompleted airports throughout the United States. When the Administration liquidated WPA several airports were being constructed, but uncompleted. Three such airports were in the Eighth Congressional District, located at International Falls, Hibbing, and Eveleth, Minn. The Federal Government had spent money on these projects, and it would be wasted, unless the work was finished. A number of Congressmen, including myself, sought a congressional appropriation in 1943, for these projects. We succeeded and Congress enacted Public Law No. 216, Seventy-eighth Congress, approved December 23, 1943. This law directed the Administrator of Civil Aeronautics to finish these airports. It will be interesting to note just what is going to be done. This is one project where the money is available, and all they have to do is start to work. This sounds simple, but, nevertheless, it is true. It is high time that we cut off landlease foolishness for foreign countries, and started to build America for our own people. Finishing these airports would be a good start.

So there may be no question about my attitude, Mr. Speaker, let me say that I have advocated and shall continue to advocate the development of aviation in the United States. Its possibilities are just in the beginning. This includes both passenger and freight service. The Federal Government ought to help, and we ought to do it now. Thousands and tens of thousands of Army and Navy men in our Air Forces will be coming back to civilian life. They are trained aviators or they are trained ground mechanics. They will be looking for jobs. Commercial aviation offers the answer.

But preliminary to all this, there must be a network of airfields, from east to west, and north to south, all over this country. This is a sound project for those who want to furnish employment in a postwar program.

The demand is immediate, for without these airfields, you cannot have air transportation to different localities. With these landing fields in operation, men will be needed at the different airports and work will be given the trained pilots. Surely we cannot overlook this opportunity to create jobs for our returned servicemen who have been trained and whose experience fits them to take part in the development in future aviation expansion.

If the proper kind of program is carried on, it will mean the manufacture of new airplanes, which will give employment to people now employed in factories which make the planes for the Army and Navy. Unless there is a demand for new planes, these factories will be closed down, with resulting unemployment.

[2] In subsequent edition of the pledge of allegiance to the American flag the word "to" was inserted, thus making it a 23-word pledge.

Dedication of Thomas Jefferson Memorial Auditorium, United States Department of Agriculture

EXTENSION OF REMARKS
OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. FLANNAGAN. Mr. Speaker, in connection with the Thomas Jefferson bicentenary celebration, the Congress created the National Agricultural Jefferson Bicentenary Committee. I was honored by appointment on the committee. One of the several recommendations which the committee made for perpetuating the memory of Jefferson with agriculture was the naming of the Department of Agriculture auditorium in his honor. Appropriate exercises were scheduled for Jefferson's birthday, April 13, 1945, but due to the death of our late President the program was postponed until May 29, 1945.

When the auditorium was dedicated on May 29 short addresses were delivered by Mr. W. A. Lloyd, Washington representative, Association of Land-Grant Colleges and Universities, and myself. Under unanimous consent, I insert the addresses in the Appendix of the RECORD:

ADDRESS OF HON. JOHN W. FLANNAGAN, JR., OF VIRGINIA, AT THE DEDICATION OF THE THOMAS JEFFERSON MEMORIAL AUDITORIUM, UNITED STATES DEPARTMENT OF AGRICULTURE, MAY 29, 1945

FARMER TOM

Farmer Tom was a versatile man. He was many sided. To the lawyers who only saw his deep interest in establishing canons that would enjoin the right and restrain the wrong, he was a great jurist. To the students who only saw his long and arduous application to the acquisition of knowledge, he was a great scholar. To those who believed in the harmonious development of all of our faculties, he was a great educator. To the political leaders who only saw his skill in the science of government, he was a great statesman. To the lovers of popular government who believed, in the matters of state, the duly chosen representatives of the people should translate the voice of those they represent into policies of government, he was a great leader. To the planners and builders who only saw his genius for designing and constructing, he was a great architect and engineer. To those concerned with establishing facts, laws, and proximate causes, he was a great scientist. But to all those who really knew Thomas Jefferson, it matters not from which side they approached, he was ever a great farmer.

Born the son of a dirt farmer whose farm was located in the foothills of the Blue Ridge Mountains of Virginia, which was then the fringe line of American civilization, the malodor of the barnyard followed his eventful, Nation-making footsteps down his trail of life, though that trail led to the Virginia House of Burgesses, to the Continental Congress, to the Governor's mansion, to the French court, to the Cabinet, yea, to the Presidency of this great Republic, reminding all with whom he came in contact that the soil has a way of identifying and marking its own.

A product of the soil, the rustic skein of agriculture was woven through his life by nature, the master agriculturist, with a persistency and continuity that far excelled the work of the most delicate hand that ever fashioned a golden skein in some great tapestry, and so we find him while in attendance at the French court collecting seed and vegetation to be sent back to his beloved America; experimenting in crop rotation and soil conservation while busily engaged with matters of state; corresponding with the different State agricultural associations, and others interested in agriculture, all during his busy life; and resigning from Washington's cabinet and returning to Monticello "to scenes," as he expressed it, "of greater tranquillity than these which neither my talents, tone of mind, nor time of life fit me," and from there writing John Adams, "I return to farming with an ardor which I scarcely knew in youth, and which has got the better entirely of my love of study."

It is written of man: "For as he thinketh in his heart, so is he." Farmer Tom was a great agriculturist because agriculture was entwined in his heart. He loved the soil and the fruits thereof. And he loved those who peopled the soil. Listen to these heart throbs: "No occupation is so delightful to me as the cultivation of the earth * * * I have often thought that if Heaven had given me choice of my position and calling, it should have been a rich spot of earth, well watered, and near a good market."

In order to impress upon you the love he had for the soil and the people thereof let me read a few excerpts from his writings.

The importance he placed upon agriculture is clearly set forth in a letter to Robert Livingston written in 1800. Here is his valuation: "The first and most precious of all arts."

In a letter to R. Izard he stated: "Agriculture is the wisest pursuit of all."

Why did he think agriculture the wisest pursuit of all? Let me answer in his own words. Here is the answer he gave in a letter to George Washington: "Agriculture is the wisest pursuit, because it will in the end contribute most to real wealth, good morals, and happiness."

Why? In a letter to Baron De Moll, written in his seventy-first year, he again answered:

"Agriculture is the basis of the substance, the comforts, and happiness of man."

And what did he think of farmers?

In a letter to Arthur Campbell he said this about those who till the soil: "Farmers, whose interests are entirely agricultural, are the true representatives of the great American interests, and are alone to be relied on for expressing the proper American sentiments."

In a letter to John Jay: "Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, and they are tied to their country, and wedded to its liberty and interest by the most lasting bonds."

In his notes on Virginia he had this to say: "Those who labor in the earth are the chosen people of God, if He ever had any chosen people, whose breasts he has made His peculiar deposit for substantial and genuine virtue. It is the focus in which He keeps alive that sacred fire, which otherwise might escape from the face of the earth."

Again in his notes on Virginia he said: "The proportion which the aggregate of the other classes of citizens bears in any State to that of its husbandmen is, generally speaking, the proportion of its unsound to its healthy parts, and is a good enough barometer whereby to measure its degree of corruption."

Born Farmer Tom, neither his deep interest and leadership in freedom's cause, nor his great effort in the field of jurisprudence, nor his love for and outstanding works in education and science, nor his successful fight to free the soul of man from legal bondage and his mind and conscience from the tyranny of power, dampened his ardor or dimmed his love for the soil and those who dwell thereon, and so he died as he was born, as he had lived, plain Farmer Tom.

And today, as one of the representatives of the farmers of America, I take pride in publicly saluting Farmer Tom as the greatest American farmer that has so far appeared upon the American field. May the soil of Monticello that he loved so deeply, so affectionately, ever rest lightly upon his remains.

And now, in a few minutes, we will, here in this beautiful temple of agriculture, dedicate this, its auditorium, to our own Thomas Jefferson, the father of American agriculture, in loving memory of the great contribution he made to God's good earth and the people who dwell thereon. May those who in the future gather here from time to time for discussion and instruction ever look upon agriculture as did our patron saint, as being "The first and most precious of the arts," is my sincere hope, my earnest prayer.

ADDRESS OF W. A. LLOYD, WASHINGTON REPRESENTATIVE, ASSOCIATION OF LAND-GRANT COLLEGES AND UNIVERSITIES, AT THE DEDICATION OF THE THOMAS JEFFERSON MEMORIAL AUDITORIUM, UNITED STATES DEPARTMENT OF AGRICULTURE, MAY 29, 1945

It is with a deep sense of satisfaction that I bring you greetings from the Association of Land-Grant Colleges and Universities. The State colleges and universities comprising this association have a very deep interest in what is transpiring here today. We welcome this opportunity to render homage and recognition to the great contribution made by Thomas Jefferson in the development of public education in America; and particularly for his original concept of grants of land by the Congress in the interest of education.

In his old age, and after much opposition and controversy, he secured a grant of funds from the Virginia Legislature to found the University of Virginia. It was to be the apex of the educational pyramid he visioned for his State. As he conceived it, it was to include useful and practical as well as cultural education as indicated by his provision for a chair of chemistry, which was to include specifically its application to agriculture. Jefferson had little relish for the refinements of science: for "the philosophers who wrote for each other." He desired that scientific discovery be related to something useful that would help people in their everyday life. Intrenched scholasticism was slow in surrendering the classical tradition. Not only did Jefferson contemplate what 50 years later became agricultural chemistry in its relation to soil fertility and increased food production, but he also envisoned its application to household economics in such homely matters as "making soap, cider, bread, butter, and cheese." It took long years for that idea to ripen into action, as it finally did in the Morrill Act of 1862, which provided for the establishment in each State of at least one college that "without excluding other scientific and classical studies, and including military science, should teach such branches of learning as are related to agriculture and the mechanic arts."

Philosophically this was the Jeffersonian concept. It visioned the completely educated citizen, with a broad cultural background steeped in the classics and the humanities but also versed in the application of science to the requirements of daily life. This is the ideal embodied in the Land Grant College Acts. Just as the University of Virginia, at the outset, fell somewhat short of Jefferson's ideals, so too the land-grant colleges were long years in attaining in completeness this grand idea: The unity of education—the integration of the ornamental and cultural with the useful and practical in the development of the truly educated citizen.

The debt which the State colleges and universities owe to Jefferson, however, is much deeper and more fundamental even than the founding of the University of Virginia. It rests on broader though less well recognized foundation. The celebrated Ordinances of 1785 and 1787 for the government of the Northwest Territory are almost wholly the fruit of Jefferson's genius. By these ordinances "lot 16 of every township" was reserved from sale "for the maintenance of public schools within said township." Here is the precedent for all future land grants in aid to education and for public improvements. This even more than the founding of the University of Virginia establishes his title as the patron saint of the land-grant colleges. Shortly after the promulgation of these ordinances, the Ohio Co., in 1788, and the Symmes Purchase, in 1794, were given grants of land by the Congress for the founding of colleges in the western wilderness comprising the Northwest Territory. To these grants of land we are indebted for the organization of Ohio University at Athens and Miami University at Oxford. These were pioneer institutions of higher learning west of the Alleghenies. So do great results follow turning loose a fruitful idea in a waiting world. The idea was to be used again and again and for many purposes in our political development and was ready made for Congressman Morrill in his bill providing for a national system of State colleges.

Chiseled in stone on the cornice of Hilgard Hall, the Agricultural College of the University of California, are these words: "To preserve for society the native values of rural life." It would be difficult indeed to better epitomize Jefferson's philosophy of the stabilizing influences of the rural population and their need for a cultural inheritance. This is the goal of the land-grant colleges. There are values in rural life that are important; that must be preserved, if "life, liberty and the pursuit of happiness," as envisioned in the immortal Declaration, are to be preserved. Genuine country culture in America is now in serious danger. City ideals and influences are becoming increasingly predominant. The open country is becoming suburban in activity and outlook. The country tradition is vanishing. This is not progress, as some would have us believe. It can be disaster. The last citadel of democratic ideals, institutions, and processes lies in the people of the open country. This too, was a Jeffersonian concept.

Our State colleges and universities are happy to join you, Mr. Secretary, in the dedication of this auditorium as a forum for free discussion, where the steady light of a genuine country culture may be forever burning and so keep our land from the eclipse of a discordant urban night. In a democracy there is no substitute for informed public opinion if liberty is not to perish from the earth.

Postwar Puzzle: What To Do With Portland Housing Land

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregonian of May 27, 1945:

POSTWAR PUZZLE: WHAT TO DO WITH PORTLAND HOUSING LAND—HOW PROJECTS WILL BE LIQUIDATED IS STILL UNANSWERED

(By Harry H. Harrison)

In the early stages of the war, Portland and Vancouver worried about where to house the thousands of shipyard workers who crowded into the area. The problem is in reverse now: What to do with all the extra houses when peace comes?

Vanport City, McLoughlin Heights, and others—what becomes of them? The answer would be simple if they were owned by municipalities; they could be ordered torn down immediately after the last shot is fired.

But Uncle Sam, believe it or not, has $100,000,000 invested in war housing in the Portland area. Five of the ten largest war housing projects in the United States are in this area. The biggest—by two and one-half times—of anything else in the country, of course, is Vanport City.

And that very fact worries both cities unless some of their plans are approved by the Government. If not, they fear each may wake up some morning with approximately 31,000 war homes on their hands to compete with permanent rental property and sadly depress the real-estate market for years to come.

When the Government built the war housing, it was the general understanding that the buildings were temporary and must be torn down within 2 years after the war ends. But city planners know that there may be considerable pressure to retain some of the dwellings, especially if approximately half of the present force of outside shipyard workers remain in the area.

SURVEY SHOWED MANY WORKERS PLAN TO REMAIN HERE

A year ago, when Henry Kaiser hired Dr. Chilton Bush, of Stanford University, to survey workers in his yards, he learned 21.3 percent will definitely stay in the area; 30.6 percent will stay if jobs are available; 23.6 percent will leave; 21.9 percent undecided, etc.

Some observers believe that a high percentage of the outside Negro workers will stay, since many southern Negroes nowhere before have found such an equality of conditions.

There are some workers who complain about Oregon's "continual rain." Then

there are others, like the elderly white worker who was sitting on a bench in the waiting room of Vanport's administration building the other day. He volunteered that he was again moving back "into one of those damn, paper-thin shacks after living downtown for a year."

He also volunteered that he was from St. Paul, had been in Portland 2 years in the shipyards, and intended to stay. He had learned, he said, that Portland was a much milder place to spend a winter than St. Paul, where "last year I was there the snow covered the sidewalks before Christmas, and we didn't see them again until the end of March."

Portland and Vancouver housing authorities have no fear that they will not have a comfortable dwelling for the worker from St. Paul and thousands of others like him who want to remain in the milder climate. But they want to do it with private capital.

Only recently Chester A. Moores, chairman of the Housing Authority of Portland, refuted charges that Portland and Seattle are "missing the boat" in not asking for Federal funds for postwar housing for the low-income groups. It came from E. Stanton Parker, regional PFHA project planner, Seattle.

Portland housing officials suspect that the Government would like to have the city commit itself to many more houses before it has had a chance to dispose of the temporary ones. Foster had estimated Portland will need 3,360 new permanent housing units.

MR. MOORES WANTS TO KNOW FATE OF HOMES

Mr. Moores asked what the Government was going to do with its $60,000,000 worth of temporary housing in the Portland area alone, of which approximately $30,000,000 is tied up in Vanport and East Vanport. University Homes and Guild's Lake projects are also among the Nation's 10 largest.

Again Mr. Moores reiterated the first objective of the Portland plan: Raze Vanport City and East Vanport as soon as feasible and convert the 790 acres into badly needed industrial sites. Right now the Portland Chamber of Commerce's industry committee has a special subcommittee spending much time on that very item.

The Vanport site has everything to attract industry, once dwelling units are razed, the committee points out. Five railroads: Southern Pacific, S. P. & S., Great Northern, Union Pacific, and Northern Pacific serve the area, thus eliminating switching charges. Public power is assured because it is near a Bonneville substation.

Five wells supply Vanport City with its own water. It has sewers, utilities, and buildings ideal for industry. It is outside city limits, assuring low taxes; it is on a branch of United States highway No. 99, and it is near the confluence of the Columbia and Willamette Rivers, to which a channel could be dug, for seagoing vessels.

And what's more important, Portland, like other cities on the Pacific coast, is short of good industrial sites.

Early last year the Housing Authority of Portland had suggested that the Government use Vanport for a few years after the war as a rehabilitation center for soldiers. A soldier could live with his family at Vanport while receiving medical treatment at nearby Barnes Army Hospital at Vancouver. But nothing came of this proposal.

VANCOUVERITES HAVE WORRIES ABOUT PROGRAM AFTER WAR

"Vanport, blocked out, could be the most model industrial district in the United States," Mr. Moores said. "It's got everything."

Residents of Vancouver even profess more worry than Portlanders. So much, in fact, that the Vancouver Housing Authority recently issued a printed brochure entitled "Vancouver's Plan." The brochure points up the problem in this manner:

"To understand the seriousness of the problem, it is necessary to look back to the community before the war. Vancouver then was a quiet little city of 18,000 people. Within its boundaries were some 6,000 homes. With the war came the Kaiser shipyards, and suddenly a great influx of workers from all over the country. A housing authority was set up and the Federal Government built 8 great projects totaling 12,350 family units and 10,000 dormitory units, occupying in all, 1,950 acres of land."

With a 60,000 population and much Government war housing, Vancouverites want to know what will happen to "this great expanse of Federal land? To the 1,000 permanent-type homes, schools, shopping centers, community buildings and a network of streets and utilities?"

The Vancouver Housing Authority wants to be sole agent for the real estate, once the houses are razed, on the theory it should be disposed of by local agencies "that understand local conditions" and put on the market as "the community requires."

VANPORT BATH TUBS SOLD TO NAVAL FORCE

Already the authority has heard reports from Washington, D. C., that the Federal Public Housing Authority does not think Vancouver's plan feasible.

W. K. Perry, executive direct of the Vancouver authority, said: "We have no argument with Washington over the physical disposition of the temporary houses. The law already requires they be taken away when no longer needed. What we're worried about is how the Government is going to dispose of the land."

The McLoughlin Heights project is Vancouver's largest. Occupying nearly 1,100 acres, it cost the Government nearly $20,500,000 and has 6,096 family housing units. Second in size is Bagley Downs, costing $5,000,000, which has 2,100 housing units. In total, the Government has spent $40,000,000 in the Vancouver area for 12,350 family units and 5,000 dormitory rooms, not including the Government-operated Hudson House $4,000,000 project at the Kaiser shipyard.

If Vancouverites can get somebody in authority to give them the green light, they would like to carve approximately 1,000 homesites from the housing area some day, without upsetting the real estate market. They believe part of it would make a site for a junior college, a tuberculosis sanitarium, and an 18-hole golf course (Evergreen Country Club was swallowed up in the building of McLoughlin Heights project). Also, there is the matter of restoring part of the city cemetery.

It was only last January that Vancouver war housing reached its peak, with 11,450 war workers or families sheltered. But shipyard layoffs now are making a big dent, and recently only 10,500 units were occupied.

The trend has been downward, too, at Vanport City, this largest of family dwelling units in the United States, with 10,414 apartments ranging from one to four rooms. Recently Vanport had 8,870 out of 10,292 units available for occupancy, or about 86.1 percent. This was a little below the average for Portland's 18,157 available units, of which then 90.9 percent were occupied.

Vanport reached its peak, too, on January 20, 1945, when a 95.9 percent occupancy was gained.

The trend in the last 3 months has been the return to Vanport of many former residents, reports Quentin B. Griffin, general manager.

"Many who went back home last fall, believing the war over, found the old home town not what they thought it was, that their home-town industry hadn't reconverted to peace, so they came back to Vanport," he said.

But Vanport continues big business when it comes to war housing. Its size and its activities continue to be an ever source of interest. Harry D. Freeman, executive director of the Housing Authority of Portland, revealed that Vanport collects about $8,000,000 in rents annually, of which Uncle Sam gets $2,250,000.

Every nationality in the world, except Japanese, lives at Vanport. Negroes make up 22 percent of the population, but occupy 18 percent of the units because many families live double. There is no discrimination and none is tolerated by any of the six shopping centers, which have 45 separate commercial projects.

Other than considerable vandalism and a few knifings that send Vanporters to their own fully equipped 130-bed hospital, crime is at a minimum. Only one murder has occurred since the project opened in December 1942.

If and when the 31,000 war homes in the Portland-Vancouver area are razed, it is a pretty good guess that all the surplus thousands of windows, toilets, stoves, pipes, and the hundreds of other items will be sold by the United States Treasury Department's division in charge of selling surplus war property. That was the case some time ago when it was found Vanport had 400 unneeded bath tubs (they had previously been located in the laundry rooms). At that time, the Treasury sold the bath tubs to the Navy.

However, when it comes to disposing of approximately $100,000,000 worth of real estate, it is not a small matter.

What a City Housewife Thinks of Daylight Saving Time

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

GREEN BAY, WIS., *June 1, 1945.*

TO OUR WISCONSIN REPRESENTATIVE, MR. STEVENSON (REPUBLICAN, WISCONSIN):

This is just a plea from a Wisconsin housewife to have our old daylight plan back again. I am a housewife that gets up at 4:30 present time (3:30 old time and who should be in bed at that hour) to get my husband off to work for the 6 o'clock shift.

Now, when all wartime business plants are working 24 hours a day what difference does the daylight-saving plan make? None at all.

Who wins on this daylight-saving plan? Not the housewife. I burn light from 4:30 till 8:30 on those long, cold, dark mornings. That's the complaint you hear from all our housewives. They can't go back to bed, because if they have two and three members of their family working they must stay up to get the next breakfast ready, then by that time it is time to get the children off to school. It's still dark when our children start off to school—and our schools and business plants burn more light in the morning than they ever had before. This daylight plan does not hurt the white-collar-job man. It is the plea for the war worker who has to get up so early to be on his job at 6 o'clock and still travel from 10 to 60 miles or more to get there. A man that's put in a hard day's work and is used to going to bed at 9 or 9:30 p. m.—in the summertime goes to bed at 8 or 8:30—which is broad daylight in Wisconsin.

A man's work is from sun to sun and not getting up with the moon shining full on his face as he goes to work.

Our electric companies are forever reminding us that the electric rates haven't gone up. They don't need to, because those dark, early mornings that we burn lights make up for any cut in light power we ever got.

Here's hoping our man in the White House will listen to our plea. Who in this world has the right to tamper with God's time? He made this world, not us. He gave us the privilege to live in it so let us leave it as He made it.

Sincerely yours,

GREEN BAY HOUSEWIFE.

A Prayer for Our President

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I submit for insertion in the CONGRESSIONAL RECORD copy of a letter addressed to President Truman by Mr. Waldo F. Operer, president of the Masonic Club of Larchmont, N. Y., and copy of the prayer offered by the club's chaplain, Lt. Col. George H. McClelland, for the President:

MASONIC CLUB OF LARCHMONT,
Larchmont, N. Y., April 23, 1945.

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: At our meeting held Friday evening, April 20, 1945, our chaplain, Lt. Col. George H. McClelland, delivered a prayer for our President.

A resolution was presented by our Congressman, Brother RALPH A. GAMBLE, to have this prayer inscribed upon the minutes of our meeting and a copy thereof sent to you. This resolution was enthusiastically and unanimously adopted.

It is my cherished privilege to enclose a copy of our chaplain's prayer.

Respectfully and fraternally yours,

WALDO F. OPERER,
President, Masonic Club of Larchmont.

A PRAYER FOR OUR PRESIDENT

(By Lt. Col. George H. McClelland)

Our Eternal God, to the secret pavilion of Thine unfailing strength and unerring guidance we repair in these climactic days of our Nation's history.

Thou hast summoned to the leadership of this great Nation Harry S. Truman, as President of these United States.

For him we beseech a plenteous bestowal of physical strength for the tasks ahead of him, and for a rich endowment of wisdom, courage, and decision as he faces the gigantic problems of world reconstruction and rehabilitation.

Succor him we pray Thee, as he summons the forces of righteousness to cleanse the muddy stream of our civilization from its barbarity, godlessness, and inhumanity.

We fervently pray that peace and just government may be restored to the nations of the earth; that concord, unity, good will, and fair dealings may be established in the farthest corners of the world.

For these tasks ahead, wilt Thou, Almighty God, strengthen the soul of our President, cheer his heart, and illumine his pathway with the beacon light of faith.

Into Thy gracious keeping we commit him, together with the weal of our Nation, and to all these high endeavours we pledge our fraternal aid and our patriotic devotion.

Amen.

APRIL 20, 1945.

Willow Run Housing

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. MICHENER. Mr. Speaker, a few days ago I called the attention of the Congress to the fact that the Willow Run bomber plant at Ypsilanti, Mich., in which the Government has an investment approximating $100,000,000, was to cease manufacturing Liberator bombers about July 1.

Incidental to the operating of this plant, additional housing was required for the employees, and the problem of disposition of this housing and facilities must now be settled. The Ann Arbor (Mich.) News contains an editorial which is to the point. The Ypsilanti (Mich.) Daily Press gives additional information which is indicative of what is beginning to happen in communities where war projects are no longer needed. Pursuant to the privilege given me, I include this editorial and this news article which are as follows:

[From the Ann Arbor (Mich.) News of June 2, 1945]

SEE WILLOW RUN VILLAGE BEFORE IT IS DESERTED

Eight miles east of Ann Arbor stands a war emergency housing project that invites the sober study of all those seriously and objectively concerned with the economics of governmental welfare projects. It is Willow Run Village, now in process of becoming deserted. In a lesser degree it is also in process of being torn down.

Gasoline and tires are precious, but their expenditure on a visit to Willow Run Village while it still is functioning, would be justified in the cause of practical, visual education.

Willow Run Village and Willow Run Lodge have served a highly useful and necessary function in the war effort. They have sheltered men and women who were needed to build Liberators in the bomber plant—Liberators which had a very real part in helping to pound Germany into submission.

But mistakes were made in the building of Willow Run Village. Mistakes due to many causes. Mistakes due to overestimating needs. Mistakes due to unrealistic theorizing. Mistakes due to a species of sociological hysteria. Mistakes due to faulty planning. Mistakes due to pressures from self-serving groups.

It is no use now to weep over these mistakes. But from these mistakes we should learn lessons—lessons that may save us many thousands of dollars, that may save us from going astray in connection with future projects of this type. It is well for us to realize these mistakes and particularly to profit by them.

Visitors to Willow Run village will see many houses that were never occupied—even when the bomber plant had peak employment. They will see the so-called corncrib dormitories for men that were never used. They will see the concrete pavements and foundations of a proposed trading center that was located far from the village and across two main trunk lines—a trading center so foolishly misplaced that abandonment was ordered immediately after it was checked by a responsible Government agent. They will see housing sections that were already well on the way to becoming blighted areas, at least in appearance, even before word came of the bomber plant closing. They will see things to admire and things to condemn.

But the important thing is that those who are interested see Willow Run village before it is too late. Then, perhaps, they will have a better idea of what Federal emergency housing means. Perhaps they will be able to form more sound opinions on both public housing and low-priced housing in general.

[From the Ypsilanti (Mich.) Daily Press of May 31, 1945]

THOUSAND IN USES OFFICE

Nearly a thousand former workers at the Willow Run bomber plant filed through the United States Employment Service office today to apply for unemployment compensation or to be referred to new jobs. Many companies have representatives at the office to recruit workers for their plants in Detroit, Cleveland, Jackson, and along the west coast.

Women workers feel the squeeze more and more as the labor market, already oversupplied with women, struggles to find some type of employment for them.

Most of the men are referred to other jobs, but many pay less than those which they have held at Willow Run.

Despite talk of extending the compensation, the figure remains the same, a maximum of $20 for 20 weeks. The worker's earnings and length of employment regulate the exact amount he may receive. In any event, he must apply for the compensation, then wait a week before drawing any money. He is not paid for the first week of unemployment after making application.

STAY FOR SCHOOLS

Rentals at Willow Village have not dropped seriously since the new lay-off schedule at the bomber plant, however most of the residents seem to be waiting for school to close June 15.

There were 1,968 apartments occupied April 24. The number has dropped to 1,400 plus 288 rooms rented in the lodge, or a total of 1,688 occupied units of the 9,474 in the entire project.

The project was built in several sections. There were 2,500 units in Willow Village, 960 in Willow Court, 1,000 in West Court, 3,014 rooms in Willow Lodge, and 2,000 in West Lodge. In addition to these units, space was provided for 535 privately owned trailers. There was a total of 4,460 family units constructed, and 5,014 rooms for single workers.

Why Lower Wages and Living Standards by Admitting Foreign Competitive Goods?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I insert the following statement of James

M. Duffy, president, National Brotherhood of Operative Potters, presented to the Senate Finance Committee, June 1, 1945:

Mr. Chairman and members of the Finance Committee, in the short time allotted to me, on behalf of the officers and members of the National Brotherhood of Operative Potters, I will try to present sufficient reasons, from America's industrial workers viewpoint, why the pending legislation, especially that section authorizing further reductions in tariff rates, should be rejected.

I ask permission that I may file a brief setting forth additional reasons why this authorization should be rejected.

Great emphasis has been laid on the allegation that workers employed in export industries receive higher wages than those workers dependent for their livelihood on allegedly tariff-protected industries.

WAGES HELD DOWN BY COMPETITIVE IMPORTS

Workers employed in mechanized and patent-protected industries, where labor costs are low, and where margins between costs and sales prices are ample, and, which industries are not forced to compete with low-wage products of foreign countries have opportunities, through collective bargaining, for better wages than workers in industries such as pottery where the products of our workers have to compete in the American market with products which are delivered into American markets at less than our costs of production.

We believe that an employer, if he is to continue to provide jobs for workers, must secure a reasonable profit on his investment.

SMALL BUSINESS PROFITS SMALL

The pottery industry has been thoroughly investigated by two Government agencies in the past 10 years. In both cases the reports of these agencies were made public. The Tariff Commission, in 1936, issued a report showing that the employers, without any allowance for depreciation or obsolescence, retained some 7.1 percent. The Office of Price Administration, in 1943, found that the industry had a margin of less than 5 percent.

The workers in the American pottery industry do not receive the wages they are entitled to. Our workers, through their economic strength, representing more than 90 percent of all the workers in the industry, would, I am sure, secure better wages if the products of their labor were not forced to compete in American markets with competitive products of workers in foreign countries which products are delivered into American markets at less than our costs of production.

We do not ask for high tariffs. We are not isolationists nor are we exclusionists.

We appeal to the Congress for tariff rates which will permit the products of our workers to have an equal opportunity of sale in American markets. In so doing are we un-American?

CONGRESS FAVORS MAINTAINING WAGE SCALE AND LIVING STANDARDS

Are we to understand that the Congress of the United States, in enacting legislation in 1936, and, again in 1938, years after the first authorization for our entry into trade treaties or trade agreements, which legislation provided, I quote "that American wage scales and standards of living be maintained," intended that such wage scales and living standards would be maintained only for a certain group of America's wage workers?

It is our understanding that tariff rates, in the past, were supposedly based on the differences in costs of production, American costs and foreign costs. It is our understanding that with the negotiation of trade treaties this principle has been eliminated on the assertion that differences in costs of production cannot be definitely ascertained.

AMERICAN PRODUCTION COSTS 100 PERCENT HIGHER THAN FOREIGN

However, one of our largest and most important Government agencies, entrusted with billions of dollars of Government moneys, has apparently found no difficulty in ascertaining the differences in the costs of production, American and foreign.

The hearings before the Ways and Means Committee disclose that the Maritime Commission, before the war, definitely ascertained that American costs of construction or production was 100 percent higher than comparable costs in foreign countries.

In so finding, the Maritime Commission, paying out hundreds of millions of taxpayers' dollars, had to be certain its findings were correct. The law under which these findings were made, section 502 of the Merchant Marine Act of 1936, revised in 1938, reads:

"The construction differential approved by the Commission shall not exceed 33⅓ percent (American costs) of the construction cost of the vessel paid by the Commission except that in cases where the Commission possesses convincing evidence that the actual differential is greater than that percentage, the Commission may approve an allowance not to exceed 50 percent of such cost, upon the affirmative vote of four members."

You will note that the law definitely requires that the Commission must "possess convincing evidence that the actual difference is greater than 33⅓ percent" of American costs. Further, that such difference in costs must be found affirmatively by four of the five members.

Emphasizing such findings, Chairman Land, in testimony shown on page 198 of the Ways and Means Committee, cites cases as illustrative, one case where a foreign-built vessel which cost $982,000 would cost $2,002,000 if built in American shipyards, and another case where a vessel built in foreign shipyards at a cost of $600,000 would cost $1,000,000 when built in American shipyards.

Yet, despite these definite findings of the Maritime Commission, we find Chairman Land, in an address at Mobile, Ala., May 22, 1945, which address was widely publicized, advocating the adoption of the pending legislation, including the presumed reduction of 50 percent in present tariff rates, and stating, "I am a 50–50 guy and certainly believe in reciprocity."

CONSISTENCY?

Are we to understand that Chairman Land, presumably one of the leading figures in foreign-trade activities in the present administration, advocates that 50 percent of the American market shall be supplied with competitive products of foreign countries? If Chairman Land really believes in reciprocity, does he believe that American shipyard workers should reciprocate their protective wage scales and living standards, secured through legislation, with America's industrial workers dependent for their livelihood on the production of articles which must compete with lower-cost competitive products of other countries?

We do not believe that those Members of the Congress representing the great majority of States and congressional districts, where there are no shipbuilding yards, are justified in supporting legislation which, after an official and undisputed finding that American costs of production are 100 percent higher than foreign costs, require the products of their constituents to compete in American markets with products of other countries on a basis of 25 percent or 30 percent tariff rates or cost differentials.

The Congress has enacted the Fair Labor Standards Act. That legislation requires that in the production of articles which move across State lines that minimum wages of 40 cents per hour must be paid for not more than 40 hours and 60 cents for hours worked in excess of 40 hours.

FOREIGN PRODUCTIVITY REDUCED ONLY 20 PERCENT

We contend that inadequate tariff rates which permit of the delivery into American markets of competitive products of workers of foreign countries at less than our costs of production will nullify such beneficial legislation.

Secretary Clayton told the Ways and Means Committee that the productive capacity of England, France, and Belgium, as I recall his testimony, had been reduced some 20 or 25 percent. We are also told that Japan and Germany will not be competitive factors in world markets for many years to come. Having been forced to accept lower wages than we believe we should have received due to the excessive competition, first of Germany, and in later years of Japan, of course, that is music to our ears. Yet such statements are not backed, and, as yet, cannot be backed, by any facts.

We do not know what the facts will be in 1947 or 1948. We do know that under what we believe to be an unwarranted delegation of the constitutional responsibilities accepted by those who sought election to the Congress of the United States that trade treaties or trade agreements entered into by the State Department in 1946 or 1947 will be binding on the United States for a period of 3 years thereafter, or into 1949 or 1950.

Surely, such a gamble is well worth looking into before we enter into it in view of the chaotic world conditions now existent.

Stress has been laid by advocates of the pending legislation on the assumption that our mechanized industries can compete with products of any foreign country, and, that low wages result in high labor costs.

EFFICIENCY OFFSET BY LOWER WAGES

We are concerned with the competition of pottery produced in foreign countries and sold in American markets in competition with the products of our workers.

The United States Tariff Commission, in its report to the Senate, 1945, on pages 2–38 states "Pottery production is technically more efficient in the United States than in all other countries, although in all countries such efficiency has increased in recent years. So far as costs are concerned, however, the greater efficiency has continued to be more than offset by the lower wages in the pottery industries in foreign countries."

This report indicates that our industry has been found to be efficient, therefore, we presume, our jobs will not be transferred to workers in other countries as readily as the workers in other industries who are less fortunate in that such a finding has not been officially made.

We also note that this finding indicates that despite the inability, due to war conditions, of foreign countries to secure additional mechanical equipment they have increased their efficiency.

SMALL BUSINESS VERSUS BIG BUSINESS

In conclusion, I wish to remind the Congress that the Congress has for a period of years concerned itself with the purpose of helping the small business concerns of this country.

The 1939 census shows that out of 184,230 manufacturing concerns, 181,925 employ less than 500. Of the balance, 176 provided jobs for more than 2,500; 634 provided jobs for more than 1,000 and less than 2,500; 1,495 provided jobs for more than 500 and less than 1,000.

WAGE STANDARDS IMPERILED

It is the belief of many who have had to study this matter of international trade insofar as it concerned job opportunities for America's workers that the negotiation of trade agreements is now nominated by or influenced by international bankers and international industrialists. We believe that this reques' for a further reduction in tariff

rates is solely for the purpose of transferring the job opportunities of America's workers to workers in other countries, where many of these international bankers and international industrialists either have or are planning to have production plants. Thus, through lack of job opportunities, to strike down our present wage standards.

An analysis of the list of those supporting this legislation will show, outside of the Government bureaucrat with a lust for additional power and authority and those who appeared in the belief that this program will lead to world peace, an idea which Secretary Clayton, in his presentation to the Ways and Means Committee refuted, consisted of those representing or influenced by international bankers and industrialists such as the London Chamber of Commerce, Overseas Club, Importers Association, and the CIO.

The record shows those in opposition, in addition to representatives of American Federation of Labor unions, and the recorded historic position of the American Federation of Labor conventions down to November 1944 seeking not high tariffs but tariff rates which will permit the competitive products of America's workers to have an equal opportunity of sale in the American market, and the representatives of free American Farm organizations such as the National Grange; the National Milk Producers Association and other dairy interests, the National Livestock Association, the National Association of Wool Growers supported by a host of witnesses consisting of those who actually operate the small business concerns of our country.

The Congress could do nothing better to help the small business concerns of this country as well as the skilled workers and farmers of our country than to reject this pending legislation.

A False Impression

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. HOFFMAN. Mr. Speaker, with the cessation of organized resistance in Germany there came a false impression that the fighting was over. Parents, brothers, sisters, and wives throughout the land jumped to the conclusion that their fighting men would soon be home and, happy in that belief, began to make preparations for the loved ones' return. Others, not so closely connected with the war effort, had a subconscious feeling of dismay, caused by the thought that a war job might, through the cancellations of Government orders, be ended, and they began to speculate as to where they would find another job with equal pay for the same amount of work.

It is extremely unfortunate that so many of us have not realized the enormity nor the frightfulness of the wars in which we were engaged. Too many of us with more money in our hands, with more money to spend than we ever had before have been enjoying a false prosperity. The war, to all too many, has been too far away, too unreal—something like motion pictures, which we view sometimes with delight, sometimes with horror, but which, in any event, were to us unreal and did not affect us personally. Unconsciously, too many of us have accepted as a matter of course the fool's gold which is a byproduct of this war. We have gone to the beer parlor, the dance hall, the bar in the classy and expensive hotel, the places of entertainment which were high-priced but always available for those who had money—and more people than ever before have had money and plenty of it—and the wars in Europe and on the Pacific has been something to talk about, to regret, but all too soon to forget. We were not living in the mud; we were not being shot at; we were not seeing our friends blown to pieces, having an arm or a leg blasted off.

THE WAR IS NOT OVER

But the war is not over. Yesterday President Truman tried to bring that fact home to the Congress by telling it that 10,000,000 men will be sent to fight Japan. Here, statements from the military authorities convey the heartbreaking information that more than a million of our men, who have faced death in front lines for two or more years, will be required to remain in Europe an indefinite time; that other millions, who have personally endured the horrors of war, will be sent to the Pacific; some receiving a 30-day furlough if they go through their homeland; others going direct without a glimpse of the country whose battles they have been fighting.

The war in the Pacific has been a bloody one. The press has always told us, as have our military authorities, that our losses there were slight, small when compared to that of the enemy. As an example, we were given to understand that a few men died on Iwo Jima, but after the battle was over the press gave us pictures of one cemetery where 4,189 Americans were buried. Yes, 45 percent of the marines who conquered that island were killed or wounded in the 26-day campaign. The total casualties were 19,938—766 a day, 1 every 2 minutes. Now in a war involving millions of men 5,000 is a small number, but if I am to be, or you are to be, the one killed or wounded, that, you and I are quite sure, is one too many. Five thousand sons or husbands is an appalling number to the parents and wives.

Yesterday's press told us that the Japanese had lost a thousand killed a day since the beginning of the assault on Okinawa, but it also carried the information that as of May 29, 9,602 young Americans, with everything to live for, were dead or missing, and the attempt to take this island has cost us more than 30,000 casualties. The Navy has been losing ships and men at an appalling rate.

SO WHAT?

Just this: We turned the tide of war in Europe, added the punch which saved the British Empire from destruction, furnished the material, and by the attack on the west enabled Russia first to save herself and then to overrun eastern Germany. All on the theory that if Hitler was not defeated, we would be invaded.

Today we have all the strategic islands necessary for our defense from Japan. Japan should be taught a lesson, but the British Empire and Russia have greater interests at stake than have we, and there is no reason why we should carry on this battle alone. Russia has an enormous army in Asia. Britain has rich colonies in the east. And the time for asking is past. The time for demanding that they step into this war and bear a share of the burden proportionate to their interests has arrived. Ten million young Americans may soon be fighting a long, long way from home, and we here at home should begin to pay, and individually through self-denial or discomfort of some kind, a small part of the cost.

When this war is ended, there should be a few million young American men to be returned to the homeland, there to become the husbands of our young women, the fathers of the future generations, the foundation of an America such as our forefathers envisioned.

COOPERATION

We are the most powerful Nation in the world. Let us act like one. Let us remain just that. Let us demand that our allies, whom we have saved from destruction, cooperate with us. We have heard plenty about cooperating with them. Now is the time for the British Empire, for Russia to cooperate with us.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. JOHN W. MURPHY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. MURPHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Philadelphia Inquirer, of May 15, 1945:

PRESIDENTIAL SUCCESSION PROBLEM NEEDS ATTENTION

(By John M. Cummings)

James A. Farley believes something should be done to clarify the procedure of designating a President in the event the President-elect and Vice President-elect should die or otherwise become ineligible for office between election day and the time fixed for taking the oath.

During a speech last week at Hazleton the former Postmaster General and one time chairman of the Democratic National Committee gave it as his opinion—or so it seems at this distance—that there is no constitutional provision covering an emergency of this character.

Naturally there has been some controversy, some citizens stating Jim has the right slant. Others say he is wrong as far as the Constitution is concerned, but right in that Congress has never enacted the necessary enabling legislation.

In any event Mr. Farley proposes that a commission be appointed to study the whole matter. It is a sensible suggestion worthy of close consideration.

It would appear that as far as the Constitution is concerned the subject is covered in the twentieth or Norris Amendment which advanced the Presidential inauguration date from March 4 to January 20.

The third section of this amendment states that Congress shall have the power to enact legislation covering the type of emergency mentioned by Mr. Farley.

The legislative body is given the right to designate a person who shall act as President until a duly chosen President or Vice President qualifies.

However, Mr. Farley believes—and others share the view—that the whole thing is obscure; that clarification is needed and a fixed procedure should be incorporated in the law.

The statute of succession is plain enough in the case of a Vice President who had already risen to the Presidency to fill a vacancy in the constitutional manner. Even so there is room for improvement and the Farley proposal might open the way for an exhaustive study of the subject.

In article 11, section 6 of the Constitution you find Congress given authority to designate the officer who shall take over in the case of vacancy in the Presidency and the Vice Presidency, but this does not cover the gap between election and the time for taking the oath.

The Secretary of State is the first in line in the act of succession passed by Congress. Not a few citizens believe this is a faulty way of handling the problem. They point out that it gives the occupant of the White House sole authority to name his successor.

Mr. Farley believes the whole matter should be thoroughly examined by a competent commission and its recommendations be given due and proper consideration by Congress.

President Roosevelt had scarcely passed the threshold of his fourth term when death suddenly ended his career and Vice President Truman stepped into the highest office in the land. Should the inevitable overtake Mr. Truman while in office he would be succeeded by a man not of Mr. Truman's selection, but of Mr. Roosevelt's.

It is pointed out by those who have given the subject some study that a Vice President succeeding to the Presidency and who, in turn sees death approaching could, if he were so disposed, dismiss his Secretary of State and appoint any John Doe or Mary Roe who might come to mind.

Many and varied are the problems presented by this matter of succession to the Presidency. Mr. Farley performed a public service by bringing some of them to public attention. The time to prepare to meet an emergency is before it arises.

Why Let Domestic Food Rot for Want of Sugar, While Foreign Candy Admitted to U. S. A.?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I insert the following news item from the New York Herald Tribune under date of June 4, 1945:

FOREIGN-MADE CANDIES' IMPORTATION IS HEAVIER

CHICAGO, June 3.—Imports of foreign-made candies are increasing manyfold, with the supply of sugar for American food-processing industries being reduced steadily, Philip P. Gott, president of the National Confectioners' Association, disclosed here yesterday.

The War Food Administration reported that granulated, cube and tablet sugar bought in January through April of this year for lend-lease territorial emergency and other purposes totaled 133,579,950 pounds.

"Cuba's shipment of candy to the United States totaled 626,000 pounds in 1941, rose to 31,643,000 in 1944, or a 4,950 percent increase, and 17,220,000 pounds in the first quarter of 1945," Mr. Gott said.

Punishment of War Criminals

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was adopted by the Tallahassee, Fla., Kiwanis Club:

Whereas America is a God-fearing Nation and was founded on the principles of liberty and justice for all mankind; and

Whereas our forebears have handed down this heritage to their posterity who have defended these principles upon the battlefields of the world; and

Whereas we are now emerging from one phase of a world conflict where our sons and daughters, like their forefathers, have bled and died, that the tyranny of would-be world masters should not rule the earth and that freedom, as we know freedom, might be preserved for all nations; and

Whereas the Nazi Party of Germany were able through controlled education and youth training to deprave their nation as a whole and together with Italy and Japan collaborating did attack without provocation, unsuspecting and unprepared nations, thus throwing other nations of the world into a maelstrom of war, whose slaughter and destruction was heretofore beyond the conception of the human mind; and

Whereas these war criminals, leaders of the Nazi Party, in their maniacal frenzy did devise and execute atrocities such as planned undernourishment, slave labor, concentration camps, organized terror and torture against all persons opposing them regardless of race, creed, or nationality; and

Whereas our President has affirmed the statement of our late President, Franklin D. Roosevelt, who together with other great leaders of the Allied Nations did pledge to bring to trial and punishment these war criminals when victory comes to our arms; and

Whereas this pledge met with universal approval by the peoples of all Allied Nations whose sacrifices have made this victory possible; and

Whereas some of the dastardly leaders and collaborators who would have had a part in the enslaving of the peoples of the world have already met their just deserts: Now, therefore, be it

Resolved by the board of directors of the Kiwanis Club of Tallahassee, Fla. (with the membership concurring):

1. That we earnestly petition our President and other officials, both civil and military, that the pledge of trial and punishment of these war criminals be renewed and restated, and that they be brought to trial as speedily as consistent with prevailing civil and military necessities; and

2. That the government of these people be controlled by the Allies to the extent that it cannot wage war and that this control be continued until such time as their government shows that it is again able and earnestly desires to take an orderly place in the family of nations and subscribe to the principles of freedom, justice, and universal brotherhood; be it further

Resolved, That a copy of these resolutions be sent to each Florida Representative in the Congress of the United States and a copy be sent to each Senator of Florida in the Congress of the United States and that a copy be placed in the permanent records of the Tallahassee Kiwanis Club.

Use of High Court Justices for Other Work Is Called Dangerous Policy

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, from the Washington Evening Star of June 1, 1945:

USE OF HIGH COURT JUSTICES FOR OTHER WORK IS CALLED DANGEROUS POLICY

(By Frank R. Kent)

Nothing is more natural than for a man who achieves the Presidency through the death of his running mate to propose carrying out the policies and commitments of his predecessor. It is the decent as well as the politic thing to do. It creates stability during an emotional period, increases confidence, promotes calm.

Mr. Truman wisely followed this procedure upon taking office, but no one has a right to take this as meaning he will not develop policies of his own nor that he will continue indefinitely either Mr. Roosevelt's appointees or economic advisers—particularly in domestic affairs. It would be disappointing indeed if he did not reverse some of the governmental habits of the Roosevelt regime. Certainly there is no obligation to perpetuate Roosevelt mistakes.

REGRET JACKSON DRAFT

Believing this, some of those who wish Mr. Truman well felt regret when he drafted Associate Justice Robert Jackson of the Supreme Court, who now is in France, to head the prosecution of war criminals. Not that in character and ability Justice Jackson is not an ideal man for the job—because he is.

The objection is not in the least personal, but is based on the far broader grounds that as a matter of public policy it is a mistake for a President to detach a member of the Supreme Court for duties unconnected with the court, no matter how important they may appear nor how convenient it may be to him.

Mr. Roosevelt did not look at it that way. He not only consulted with members of the Court on patronage and political matters, from which they are traditionally supposed to be aloof, but more than once he reached into the Court and drafted one of its members for outside work.

For example, he named Justice Roberts as head of a commission to investigate the Pearl Harbor disaster, a mission which detached him from the Court for approximately 4 months. He did it again when he got Justice Byrnes to resign to become War Mobilization

Director. And he once asked Chief Justice Stone to head an important commission, but the Chief Justice declined.

DESTROYS TRADITION

The points made against this practice are:

1. That it destroys the tradition of aloofness of the Supreme Court, detracts from its dignity and tends to lower respect for it as a tribunal whose members are permanently removed from all considerations save the interpretation of the basic law and the promotion of justice. The same arguments apply to efforts made from time to time to persuade members of the Court to become candidates for President or Vice President.

2. That detachment of one justice easily might put the Supreme Court in position where it could not function. Though the Court is composed of nine members, six, not five, is a quorum of the Court. In the present court three members were formerly Attorney Generals and one was Solicitor General. Cases constantly arise where one, often two—and more—of these feel disqualified from sitting. Thus, detachment of one member and sickness of another could reduce attendance of the Court to five, which is not a quorum.

ADDS EXTRA WORK

3. Even if the danger of no quorum did not exist, the detachment of one man imposes additional work upon the remaining members. Instead of the Court's work being divided among nine, it has to be divided among eight or seven already fairly well burdened.

4. Detachment of one man and the certainty that in many cases one other Justice will be disqualified either by former connections or illness greatly enhances the danger of decisions by four members, one less than a majority. These four-Justice decisions are concededly unfortunate, breed discontent, criticism, and confusion.

One notable instance occurred last year when the detachment of Justice Byrnes and the disqualification of Justice Reed reduced the Court to seven. Thus, in the insurance case four Justices were enabled to reverse consistent decisions of the Supreme Court which had not been questioned in more than 100 years.

DECISION CAUSED CHAOS

As a result, Congress is still trying to find a way to nullify the harmful effects of that decision, and both President Roosevelt and his Attorney General recognized that a condition of chaos threatened the entire insurance industry—a condition the companies are still trying to avert.

It is true the expectation is that the work which President Truman has asked Justice Jackson to undertake will be completed within the next 4 months while the Court is not in session. But it is not sure that it can be completed in that period; and in any event, that does not affect the principle.

Many judges and lawyers—laymen, too—feel deeply on this subject. They are convinced that President Truman does not fully understand the dangers of these detachments. They hope the points above will be brought to his attention and that the case of Justice Jackson will be the last of its kind.

Bretton Woods Proposals

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 1, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, although I have spent several years in studying monetary problems, finance, and foreign exchange, I cannot claim, nor do I claim, to be an expert in such matters. I, therefore, marvel at the ease with which certain individuals and pressure groups have endorsed the Bretton Woods proposals without limiting amendments. If it were not for the serious impact that these proposals might have on the future economy of our country, it would indeed be humorous to observe the manner in which a large number of well-intentioned individuals lend their influence because of high-pressure propaganda for the spending of public money in the complex and tricky field of international finance.

In passing, it must not be overlooked that the same self-styled monetary experts, who sold the scheme of deficit spending to the New Deal 12 years ago, are also the originators of the Bretton Woods proposals. These experts also proposed the scheme which embarked the United States on the policy to purchase all of the gold in the World at an inflated price. This policy resulted in our purchase of nearly 75 percent of all known gold, only to bury it beneath the ground in Kentucky. They were also the originators of the spend, spend, and tax policy which failed to solve our farm and unemployment problem until war overtook our country. They also coined the erroneous theory that the size of our public debt did not matter as long as we owed the money to ourselves. And now, these monetary experts are proposing the Bretton Woods agreement as the only scheme to bring world economic stability, and the only method whereby a lasting peace may be secured. In view of our experience with these so-called monetary experts during the past 12 years in the field of finance and monetary manipulation, it should not be surprising to anyone that there are a few of us who look with some suspicion on the schemes agreed to at Bretton Woods, which will soon be up for consideration in this House.

I have tried to give careful study to the language and intent of the Bretton Woods proposals, but I must confess, that I am still in a quandary as to whether or not these proposals should be approved by Congress. I sincerely desire to act for the best interests of our country. I feel that this is my primary duty, and such a course must naturally be the objective of every Representative in this body.

If the Bretton Woods proposals are not agreed to as presented to Congress, I am convinced that the Democratic administration, now in power, will find some other method to finance and enter into the field of international finance. It is quite apparent to me that the tremendous amount of propaganda which has been broadcast over the country for the past 6 months will be sufficient to approve the Bretton Woods proposals in the House of Representatives. In view of this fact, we can only hope that the administration will protect American interests, and not be led into the trap of using American funds for rebuilding world cartels or engaging in world power politics.

In my search for the truth as to the authority conferred upon the International Bank and Stabilization Fund created under the Bretton Woods agreement, I submitted a series of questions to the Secretary of the Treasury under date of March 31, 1945. These questions were answered under date of April 10, 1945, by Mr. H. D. White, the Assistant Secretary of the Treasury, and I am including the questions and answers as a part of my remarks. The questions and answers may be helpful to other members of Congress, who may have some doubt as to the merits of the bill which commits the United States to the Bretton Woods agreement.

As far as I am concerned, I will hold the Secretary of the Treasury and the administration to the answers given in response to my questions. I cannot believe that Mr. Morgenthau and his associates who are charged with the responsibility of handling the financial affairs of our country, would sell the American people short. Should future events disclose that I have been misled by the commitments made to me by Mr. White, the Assistant Secretary of the Treasury, I shall without hesitation vigorously oppose the continuation of United States participation in the International Bank and Stabilization Fund agreed to at Bretton Woods.

TREASURY DEPARTMENT,
Washington, April 10, 1945.

Hon. AUGUST H. ANDRESEN,
House of Representatives.

MY DEAR MR. ANDRESEN: This is in reply to your letter of March 31, 1945, to Secretary Morgenthau in which you ask certain questions on the Bretton Woods proposals.

Question 1. "At the beginning of the operations of the stabilization fund, will the Board in charge of the fund, have the power to equalize the exchange value of the money of any member country, in the effort to stabilize foreign exchange? If such authority is given, can the Board devalue or revalue the currency or money of any member country without the consent of such member country?"

Answer. Before the fund begins exchange transactions each member country will be requested to communicate to the fund the par value of its currency in terms of gold or the United States dollar based on the rates of exchange prevailing on the sixtieth day before the agreement on the fund comes into effect (article XX, section 4–a). The par value communicated by a member becomes the par value of its currency for the purposes of the agreement unless within 90 days the member notifies the fund that it regards the par value as unsatisfactory or the fund notifies the member that in its opinion the par value is not an appropriate one. In such a case the fund or member must agree upon a suitable par value for the currency. If the fund or the member do not agree, the member shall be deemed to have withdrawn from the fund (art. XX, sec. 4–b).

Section 6 of H. R. 2211 provides that "when the United States is requested by the fund to communicate the par value of the United States dollar such par value shall not be communicated as other than $15\frac{5}{21}$ grains of gold nine-tenths fine." The parity of the United States dollar will therefore be the present gold content of the dollar.

No change in the parity of a currency can be made except on the proposal of the member and only after consultation with the fund. Any proposal for a change in the par value of its currency must come from the country. Section 5 of H. R. 2211 provides among other things that "unless Congress by law authorizes such action neither the President nor any person, or agency shall on be-

half of the United States * * * (b) propose or agree to any change in the par value of the United States dollar under article IV, section 5, or article XX, section 4 of the articles of agreement of the fund, or approve any general change in par values under article IV, section 7."

Question 2. "Does the Stabilization Fund Board have the power to fix the world price of gold and silver?"

Answer. The fund does not have the power to fix the world price of gold or of silver.

The fund in no way affects a country's dealings in silver or the silver content of its coinage.

The relationship between gold and the currency of each member is determined by the par value of its currency which is defined in terms of gold. Members agree not to buy gold at a price above the par values of their currencies plus the prescribed margin, or to sell gold at a price below the par value of their currencies minus this margin. In this way the maintenance of exchange stability within a small range above and below the gold parity of a currency is assured.

Under the fund agreement the price of gold in terms of each currency would be fixed. This is inherent in any system of maintaining stable exchange rates by defining currencies in terms of gold as a common denominator. The concept of a world price of gold refers to the fact that when currencies are defined in terms of gold, the price of gold is the same in all countries at the par of exchange for each currency.

The fund agreement provides that by a majority of the total voting power the fund may make a uniform proportionate change in the parity of the currencies of all members, provided that such change is approved by every member which has 10 percent or more of the total of the quotas (art. IV, sec. 7). Under this provision the United States would always have the power to veto a proposal to make a uniform change in the par values of all currencies. It should be noted that under the terms of section 5 of H. R. 2211, quoted above, this country cannot consent to a uniform change in par values unless Congress by law authorizes such action.

Question 3. "Does the stabilization fund have the authority to fix tariff duties for any member country?"

Answer. The fund has no authority whatever to fix tariff duties.

Question 4. "Does the stabilization fund have the authority to allocate or direct the distribution of goods in foreign trade or to direct the flow of foreign commerce?"

Answer. The International Monetary Fund has no authority to allocate the distribution of goods in foreign trade or to direct the flow of foreign commerce.

When a general scarcity of a currency develops, members of the fund are authorized to limit transactions in the scarce currency. Under this provision the fund would not allocate or direct the distribution of foreign trade although member countries would be able to limit the purchases of imports where they are not in a position to pay for them.

It should be clear that the fund is not the cause of the scarcity of a currency. In the absence of the fund the scarcity would be more severe and the restrictions that would be imposed unilaterally by each country would be as drastic as each country wished. The fund would have the effect of limiting restrictions that might otherwise be harmful to this country.

The fund would supplement the accruing supply of the scarce currency from its own resources and it would secure a fuller utilization of the gold and dollar reserves that member countries already hold. Further, under the fund, when a currency becomes scarce the limitations imposed by member countries may be no more restrictive than is necessary to limit the demand for the scarce currency to the supply held by or accruing to the member, and the limitations must be relaxed and removed as rapidly as conditions permit (art. VII, sec. 3-b).

Question 5. "Should a member country refuse to be bound by the decisions of the stabilization fund, can the fund apply 'sanctions' that would imperil imports and exports to and from such country?"

Answer. The fund cannot impose any sanctions that imperil the imports or exports of a country.

The fund has three means of inducing members to abide by the provisions and the purposes of the fund agreement:

1. The fund may communicate its views informally to any member, and with a two-thirds majority, it may publish a report regarding monetary or economic developments which tend to produce a serious disequilibrium in the international balance of payments (art. XII, sec. 8).

2. The fund may limit a member's use of the fund's resources (article V, section 5) or it may declare a member ineligible to use the fund's resources (art. V, sec. 5; art. XV, sec. 2-a).

3. If a member persists in failing to fulfill its obligations under the fund agreement, the country may be required to withdraw from membership by a majority of the governors representing a majority of the total voting power of the board of governors (art. XV, sec. 2-b).

Question 6. "If the hard cash and gold placed in the fund by the United States is used up, what will happen to United States imports and exports in the event that no additional money or gold is subscribed by the United States to the fund?"

Answer. It should be remembered that other countries will subscribe more than $1,000,000,000 in gold in addition to the nearly $700,000,000 in gold subscribed by the United States. The dollar holdings of the fund will amount to about $2,100,000,000 and its gold holdings to about $1,800,000,000. With these holdings it is very unlikely that the fund will be unable to sell dollars to members who are eligible to deal with the fund, if our imports are maintained and if we undertake even a moderate amount of foreign investment for sound and productive projects.

The articles of agreement for the fund provide that a country using the fund's resources must reduce its own monetary reserves by an equal amount. Therefore, to exhaust the fund's holdings of gold and United States dollars it would be necessary for the United States to have a favorable balance on current and capital account of nearly $2,000,000,000 a year for 6 years. With such a large favorable balance on current and capital account, the members of the fund could use $4,000,000,000 of the fund's resources. Ordinarily, to do this over a 6-year period they would have to use $4,000,000,000 of their own reserves and $8,000,000,000 of newly mined gold outside of the United States. Making allowance for the inadequacy of the gold holdings of some countries and accumulation of newly mined gold by countries not using the fund, it may be assumed that exhaustion of the fund's resources of gold and dollars might occur with use of $8,000,000,000 of reserves outside the fund. This would require a $2,000,000,000 favorable balance for 6 years.

The fact is that at no time in our history have we run a favorable balance on so large a scale for so extended a period. In the 5-year period from 1934-38 the net inflow of the gold to the United States amounted to slightly less than $7,000,000,000. Of this, known current transactions accounted for less than $1,000,000,000, known capital transactions for $4,500,000,000, and the residual for more than $1,500,000,000. The greater part of the residual probably reflects unrecorded capital movements. This was the period of the greatest scarcity of the dollar; and yet even in this period the favorable balance of the United States on current and capital account amounted to less than $7,000,000,000 over a 5-year period. If the flight of capital from Europe to this country is not resumed after the war, and if we undertake even moderate foreign investment, there is no great danger of a scarcity of the dollar.

That is not to say that with every disturbed international economic relations a scarcity of the dollar cannot occur. Obviously, it can, and that is why the international monetary fund provides a means for dealing with it. But the consequences of a scarcity of the dollar should be properly evaluated.

A scarcity of dollars in the fund would mean two things: The fund would no longer sell dollars under the provisions of article V, section 3 (a); and members would be authorized temporarily to limit exchange transactions in dollars. In all other respects, the fund would function in precisely the same way as if there were no scarcity. Exchange rates and exchange policies would continue to be subject to the provisions of the fund agreement. The fund's exchange transactions would go on much as before. It would have adequate holdings of the 43 currencies other than the dollar and it would sell such currencies to members to meet deficits in their international accounts. The fund would never suspend its sales of dollar exchange, although like member countries it would have to limit its sales of dollars. The fund would have some gold and dollars at the time the scarcity is declared and it would receive additional gold and dollars from its other transactions. These resources would be sold under article VII, section 3 (a) by apportioning the funds' existing and accruing supply. In the meantime, the fund would report on the situation and make such recommendations as it found necessary.

When a currency becomes scarce, there is no practical way to limit the scarcity except to allow some restrictions in exchange transactions in that currency. The only alternative would be a general limitation on international payments through increased trade barriers, or widespread depreciation of exchanges (or an appreciation of the scarce currency) which may be wholly undesirable, particularly if the scarcity can in time be corrected in other ways. Under such circumstances, it is far wiser to permit a temporary limitation on exchange transactions. Such restrictions would necessarily be imposed in the absence of the fund. With the fund the restrictions are limited to the extent necessary to adjust demand to the scarce supply; they are under the supervision of the fund; and the member country whose currency is involved has an opportunity to be heard regarding the administration of the controls. Furthermore, the amount of restriction is bound to be less with the fund because the fund's resources supplement the reserves of members, the fund has accruing resources which are available to mitigate the scarcity, and the fund is in a position to facilitate a correction of the conditions causing the scarcity.

If the dollar should become scarce, the exports of goods and services from the United States would have to be limited to the amount of dollars available from our imports, our purchase of services abroad, and our net new capital investment. This might be supplemented somewhat by the fund with gold and dollar resources it acquires from other members who are building up their monetary reserves. Obviously, if the dollar became scarce, our exports would be less than if the fund were in a position to meet all demands for dollars. They would not be less than our exports in the absence of the fund. On the contrary, even during the period of scarcity our exports would be on a larger scale than without the fund, for the fund would supplement the dollars held by members, it would see that limitations on exchange transactions are no more restrictive than is absolutely necessary, and the fund would require removal of these restrictions as soon as the scarcity was ended.

The scarce currency provisions of the fund are a fair means of dealing with a difficult problem in a period of severe economic strain. The fund would prevent the development of serious exchange disorders and it would provide an orderly means of dealing with such problems.

Question 7. "What is the voting power of the United States in the fund, and can the United States veto any action taken by a majority of the members of the fund, which may be detrimental to our country?"

Answer. The United States has 28 percent of the total voting power in the fund. Further provision is made to insure an increasing voice to all countries whose currencies are used by the fund. On all matters of voting that deal with the use of the fund's resources, a country whose currency has been sold by the fund secures an additional vote for each $400,000 of the net sales of its currency by the fund. Under such provision the voting power of the United States could rise from 28 percent of the total to 35 percent of the total.

Certain of the decisions made by the fund which vitally affect the interests of the United States require more than a simple majority of the total voting power. No change in the quota of the United States could be made without our consent and a change in the parity of the dollar could be made only on the proposal of the United States. In the case of a vote for a uniform change in the par values of all member currencies any member having 10 percent or more of the total quotas, which includes the United States, can veto the proposal. Changes in the quotas of any member country and amendments to the fund agreement require a four-fifths majority.

It should not be inferred that the influence of the United States will be limited simply to its formal voting strength. The power and influence of the United States over decisions in the fund will be far greater than its voting strength would indicate. It is doubtful whether the fund's management would make an important decision without the affirmative vote of the United States.

Please let me know if there are any further questions on the Bretton Woods proposals which you would like to have answered.

Very truly yours,

H. D. WHITE,
Assistant Secretary

Expenses for Representatives

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. AUCHINCLOSS. Mr. Speaker, under permission given me, I include in my remarks an editorial entitled "Expenses for Congressmen" from the Asbury Park Evening Press, Asbury Park, N. J., of June 2, 1945. The Press enjoys the largest circulation of any daily paper published in Monmouth County, N. J., which I have the honor to represent, and is noted for its constructive, independent, and progressive views on matters of public interest. This can be readily appreciated by reading this editorial and it is refreshing to see in a newspaper such a straightforward and honest approach to the question of the payment of Congressmen's expenses. It is regretted that so much has been misinterpreted in the discussion of this proposal that the public mind has been misled and confused as to what it is all about. I am firmly conviced that the provision in the bill to cover, in some measure, the legitimate expenses of Members of the House is the most honest and businesslike way to solve the problem. Here is the excellent editorial:

EXPENSES FOR REPRESENTATIVES

Representative AUCHINCLOSS has offered an able defense of the House's action in voting its Members an annual expense of $2,500. Unfortunately, the expense allotment measure has been widely construed as an attempt to use the back door in collecting more pay from taxpayers. It is also suggested that the Representatives choose an expense account rather than a higher salary, because salaries are subject to income taxes whereas compensation for expenses is not. Thus, the impression created by the expense-account measure has been less than favorable. It became especially unfavorable when the Senate refused to share in it.

But Members of the House are probably entitled to this additional revenue for actual expenses incurred. They are compelled to spend a large part of the year in Washington and yet maintain residence in the district they represent. In business it is common practice to compensate employees for expenses incurred while traveling on business or while living away from home for business reasons. As Mr. AUCHINCLOSS points out, business houses and newspapers allow their Washington representatives adequate expense accounts. There is no reason why those who perform the public's business in Washington should not be treated as well. Nor should compensation to allay legitimate expenses be taxable for, were taxes to be deducted, it would be necessary to raise the compensation to equal the expense it is intended to meet.

Mr. AUCHINCLOSS indicated that out of his $10,000 salary he nets but $4,000 for living expenses. And while this may be adequate, it is hardly sufficient to support the type of living which is forced upon a Member of the House of Representatives.

It is possible, of course, to find candidates for Congress, however low the salary. The honor is inviting. But inasmuch as you can't eat high honors, men and women of moderate means would thereby be excluded from Congress and the Nation's legislative body would become in truth a millionaires' club.

Rather than convert Congress into an exclusive society, we should prefer adequate compensation so that citizens in all economic levels will be in a position to serve if the voters select them. A democracy can afford nothing less.

The Filson Club of Louisville, Ky., and Gen. George Rogers Clark

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. O'NEAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a resolution adopted by the George Rogers Clark Memorial Committee of the Filson Club, of Louisville, Ky. The Filson Club is an old and distinguished historical society which is widely known for its important work to preserve American history.

I am also including an article sent to me by the Filson Club on George Rogers Clark prepared by Hambleton Tapp.

The lives of very few men in American history have influenced the future of America as much as has that of Gen. George Rogers Clark. It is hoped that the electors of the Hall of Fame, New York University, will elect General Clark this year to membership in the Hall of Fame.

The resolution and article follow:

"Whereas George Rogers Clark, during the Revolutionary War, conquered and held for the American Nation the Old Northwest (comprising present-day Ohio, Indiana, Illinois, Michigan, Wisconsin, and a part of Minnesota), thereby saving Kentucky and Virginia, as well as preventing General Washington's army from being attacked from the west and possibly destroyed;

"Whereas George Rogers Clark has not been generally accorded recognition commensurate with his distinguished services and brilliant and great contributions to the Nation; and

"Whereas the Governors of Kentucky, Virginia, Ohio, Indiana, Illinois, Michigan, and Wisconsin, in behalf of the citizens of their respective States, have solicited, through letters, the electors of the Hall of Fame (New York University) to vote for the election of General Clark this year to membership in the said Hall of Fame: Therefore be it

"Resolved, That the Honorable EMMET O'NEAL, Congressman from the Third District of Kentucky, be, and is hereby, petitioned to request introduction into the CONGRESSIONAL RECORD a brief statement of the life and services of George Rogers Clark, to the end that copies of said biographical statement be printed and passed to the electors of the Hall of Fame, in order to call attention to the significance of General Clark in the saving and expanding of the Nation."

Passed this the 24th day of May 1945 by vote of the George Rogers Clark Memorial Committee of the Filson Club, of Louisville, Ky.

HAMBLETON TAPP,
Chairman of the Committee.
OTTO A. ROTHERT,
Secretary of the Committee.

In the spring of 1775, George Rogers Clark, 23 years of age, stood on the high ground above the gracefully curving Kentucky River; he leaned on his long rifle and gazed out over the rolling green land below. The panorama was beautiful and fascinating; the land was a veritable Eden.

Never before perhaps had the eager young Clark beheld such a galaxy of natural splendor and loveliness. To the brilliant imagination, the country was worthy of the most exalted dreams of the far-traveler seeking the Utopia. This land, Kentucky, the bold, handsome pioneer, determined, at all hazards, to make his home.

But, like the lovely maiden chained in the castle of a demon, the fair land could not be had for the asking. Danger lurked everywhere; not only the known dangers of the wilderness, with its perils—its wild beasts and venomous reptiles—but dangers from savage men who sought with fiendish cunning to ply the tomahawk and the scalping knife upon every white person in the country.

Moreover, as the war for Independence had begun, there was the peril that hordes of these savages, supported and led by British and Tories, would cross the Ohio River, fall upon the lonely settlements, destroy them, and murder or torture every person who could

not escape. Within a few months seldom a day would pass in which some luckless settler and his helpless family would not be attacked, often tortured and killed. This peril was so imminent that the whites were in danger of being driven out or annihilated, and Kentucky lost.

Actually, even then, strong forces were being prepared to be loosed upon the Kentucky stations. And there was the added danger that Virginia, with a precariously-exposed western frontier, would be overrun by savage hordes led by British officers, and the cause of independence in the east crushed out.

Such by 1777 was the condition of the lovely land which had on that spring day in 1775 so fascinated the intrepid, sandy-haired young Clark. If ever a strong leader was needed, then was the time, and Clark was the man. "He (Clark) was brave, energetic, bold, prepossessing in appearance, of pleasing manner * * * with all the qualities calculated to win * * * a frontier people."

The one thought uppermost in his mind was this: Kentucky must be saved. He would make a desperate effort. He planned a bold move. He would lead a force into the heart of the hostile territory in the Northwest and destroy the enemy at his source.

Colonel Clark's little army left Corn Island, at the falls of the Ohio, now Louisville, on June 24, 1778. That small force of 150 men which shot the rapids in flatboats on that summer morning while the sun was in total eclipse was probably the strangest, wildest band in appearance that the eyes of white men had beheld since the time of Attila. The soldiers were savagely bronzed and bearded, big, and fierce; they wore hunting shirts and breechcloth, were naked of foot and limb, with bed, food, powderhorn, knapsack, and gun about their shoulders or at their side.

The first object of Colonel Clark's campaign was Kaskaskia, probably a hundred miles north of the mouth of the Tennessee, near the Mississippi River.

That post was surrounded on the night of July 4. So stealthily and quickly did Clark's men move that the British commandant was taken in bed with his wife.

The dazed and befuddled garrison had been surprised, immobilized, and made prisoner before its men fully realized what had befallen. That hot summer night at Kaskaskia was the biggest 4th of July that Clark and his backwoodsmen had ever known. Colonel Clark's was the sword of the Declaration of Independence in the West.

Clark's campaign for the capture of Vincennes on the Wabash, 200 miles from Kaskaskia, in February 1779, is a familiar chapter of Kentucky and of national history. It is a thrilling story of courage and patriotism, recounted by school children. Yet to us of this late date, the intense action, the superbly brilliant leadership of Clark, and the stark heroism maintained throughout is fairly overwhelming. Each scene was crammed with thrilling drama.

The small force of 150 men set out from Kaskaskia on the morning of February 5. You will recall the colorful scene; the steady soldiers and the excited French natives standing in Kaskaskia with heads bowed listening to the eloquent benediction of the patriot priest, Father Pierre Gibault; the gay and exhilarated long-rifle men marching out of the town—Clark mounted on his fierce Mexican charger, soon to be abandoned; the plucky little drummer boy beating wildly, while the giant sergeant beamed down with an approving, good-natured grin.

Then the changing scene: The driving, pelting rain made icy by the chilly mid-winter wind; the miles upon miles of dreary watery waste; the monotonous, fatiguing wading, with the never-ending slush, slush of boots sinking knee-deep into water and mud; Clark's clever rescurcefulness in keeping the men in good spirit.

And then with the passing of each day a spectacle more grim: deepening water, stretching for miles; the downpour almost continuous and becoming more icy with the passing of the hours; clothing wet all the time; fires no longer possible; food practically gone; physical strength ebbing rapidly; sleep, only fitful sleep, on wet, freezing ground in wet, freezing clothes.

The final 2 days out were days of absolute desperation: On reaching the last vast stretch of water, Clark's men, dangerously near complete exhaustion, hesitated. Without pausing the resourceful young leader blackened his face with dampened power, raised the Indian warwhoop and plunged into deep water encrusted with a sheet of ice. The stronger men plunged in behind him; many of the weaker ones clung to comrades; some plunged in and sank, but were picked up by boats; others grasped the branches of trees. Many reaching the other side were too weak to pull up the bank. All the while Clark was calm and indefatigable, his courage invincible, his leadership brilliant and inspiring.

The remaining part of the story is well known. Whether or not the rude American flag was made and raised by the pretty hands of patriotic Alice of Old Vincennes, suffice it to say that an American flag was raised over Fort Sackville at Vincennes on February 25, 1779.

Colonel Clark's desperate venture had succeeded beyond the wildest dream. The results were astoundingly far-reaching. The lives of the people of Kentucky were saved. The western boundary of the new Nation would be the Mississippi River. Washington's exposed western flank was no longer in danger. In addition, an empire had been gained. The northern boundary of the United States would be the Great Lakes instead of the Ohio River. The States of Ohio, Indiana, Illinois, Michigan, Wisconsin, and a part of Minnesota would be saved out of Clark's magnificent conquest:

The glorious day, February 25, 1779, was the highest point in Clark's career. Yet he continued to serve Kentucky and Virginia brilliantly until the close of the Revolution, never failing to strike terror into the hearts of the Indians whenever he met them.

Following Captain's Byrd's bloody forays with his force of Indians into Kentucky in June 1780, General Clark led an army of approximately 1,000 Kentuckians against the Shawnees in Ohio and destroyed their principal villages: Chillicothe on the Scioto and Piqua on the Great Miami. Again, in 1782, following the tragic defeat of the Kentuckians at the Blue Licks, General Clark collected an army and overran the Shawnee territory, completely destroying their villages and their supplies and effectively breaking their spirit.

Something strange there was about the rapidity with which Byrd's army retired from Kentucky. His force was not only large but carried along cannon large enough to batter down any stockade in the district. Kentucky for the moment was in his power.

The story persists that the Indians, while they were collecting scalps and plundering and burning cabins at Martin's and Ruddle's stations in northern Kentucky, heard a rumor that General Clark was approaching. Their superstitious fear of the name Clark completely overcoming them, the savages fled so rapidly that they abandoned much booty, even tomahawked prisoners along the way who could not keep up. The suggestion has been advanced that Captain Byrd, horrified by the brutal slaughter, made no effort to deny the rumor of Clark's aproach, in order to prevent recurrences of the inhuman butchery.

In addition to these services, General Clark founded Louisville, and many authorities insist that it was he who named the town in honor of the French king, Louis XVI, out of gratitude for French aid to the Americans.

At the end of the war, General Clark was residing with his parents at Mulberry Hill, on what is now Poplar Level Road, near Louisville. He was practically penniless. During that year, 1783, he made the long, tedious, and lonely journey across the mountains to Richmond, the capital of Virginia. There, fatigued and in rags, he applied to Governor Harrison for a small advance on money which he had advanced to supply Virginia's army. The man who had saved a State and won an empire was obliged to supplicate his government for money to buy food and clothing. In Richmond, sympathy and praise were profusely expressed, but no money for food and clothing was available, and the forlorn hero sadly retraced his painful steps to the falls of the Ohio.

Already dejected and despondent, General Clark was soon beset with lawsuits for the recovery of sums advanced to him for the support of his army. Even though independence was at stake and the lives of the people were in danger, Clark had been unable to obtain supplies except by using his own property as collateral. Practically all he had left in the way of salable property was taken from him. Yet, swallowing his disappointment and sorrow, he resolutely set about the task of making a living.

During the years 1798 and 1799, death came to his aging parents at Mulberry Hill. This was a great loss, as the affection between Clark and his kindly father and mother was deep. They had treated him as tenderly as though he were an only child. The fine old man had considerable property, yet he could leave practically nothing to his son, George Rogers, because any property so willed would be subject to seizure by creditors. But General Clark continued to reside at Mulberry Hill for 3 years, forced to depend upon the generosity of his admiring and sympathetic brother William. His many brothers and sisters ministered with fine loving kindness to his afflictions, giving him comfort and encouragement at every turn.

General Clark, in 1803, moved across the Ohio River opposite the falls and founded a town which came to be called Clarksville. There he built a log cabin on a prominent point within sight and sound of the falls.

It is said that he was fond of sitting on the rude porch and gazing out over the beautiful Ohio, a stream which had figured so prominently in his great career. The graceful bend below the falls, the mighty pounding of the waters along the rapids and the slowly rising mist presented a scene which must have been soothing to his troubled mind. At this house, he received each year Indian chiefs and warriors. These old braves visited him to smoke the pipe of peace and friendship, with, as they insisted, "the first man living, the great and invincible Long Knife."

It was from Clarksville that, during the year 1803, the aging warrior had the great honor of giving his blessing to his beloved brother, William Clark, and to Captain Meriwether Lewis, of the Lewis and Clark expedition, as they set out from Clarksville on their hazardous and thrilling adventure across the vast stretches of the West to the vast expanse of the blue Pacific.

Ever and anon, the old debts would rise to plague him; they would not be permanently downed; and lawsuits were continuously coming up, giving his troubled mind no peace. But never did Clark's friends and brothers cease to help. His eldest brother, Jonathan, pleaded for the payment of the just claims before both the Virginia Legislature and the Congress at Washington.

In the written petition to Congress, General Clark spoke feelingly of the justness of his claims. "I engaged in the Revolution with all the ardor that youth could possess," he wrote. "My zeal and ambition rose with my success. * * * At the most gloomy period of the war, when a ration could not be purchased on public credit, I risked my own, gave my bonds, mortgaged my lands

for supplies, paid strict attention to every department. * * * At the end of the war, I had the pleasure of seeing my country secure, but with the loss of my manual activi'y and a prospect of future indigence. * * * Suits commenced against me. * * * My military and other lands earned by my service as far as they would extend were appropriated for the payment of those debts, and demands yet remaining. * * * I see no other resource remaining but to make application to my country for redress."

The exposure and sacrifices of the "great campaign" had overtaxed Clark's strength, seemingly superhuman though it had been. His health gradually failed. Painful rheumatism developed. And then a fateful day in 1809, the paralytic stroke. That day a party of acquaintances from Kentucky on a hunting excursion made him a visit.

"After spending some time with him in a jovial way, they departed on their hunt, leaving him alone in his humble cabin. Some time after their departure, he was stricken with paralysis and fell to the floor helpless, and, for a time, unconscious, without any one present to assist him. He fell in front of the old-fashioned log fireplace, in such a way as to burn one of his legs, which brought him to consciousness, but he never recovered from this stroke of paralysis. * * * He lived in a helpless condition, and the burn on his leg finally turned to erysipelas, which made its amputation an absolute necessity."

General Clark bore up under this terrific affliction with remarkable firmness and bravery. The amputation was performed by Dr. Ferguson, of Louisville, amid surroundings which are probably as unusual as any in medical history.

Friends and neighbors came in, all striving to help and bring comfort. Col. George Rogers Clark Floyd, son of the old warrior's beloved friend, Col. John Floyd, who was killed by the Indians in 1783, brought a company of soldiers to Dr. Ferguson's office near what is now Main and Fifth Streets in Louisville. The troops surrounded the building, while fifers and drummers made lively music for 2 hours, the time required for the amputation of the leg. During that ordeal Clark kept time to the music by beating with his fingers on the table. Other than a good quantity of whisky, no anesthetic was administered; it was before medical opiates had come into common use. The suffering from the operation was torture, yet the great old soldier bore it unflinchingly. Early that evening fifes and drums once more made lively music to soothe the suffering man and later he was serenaded with violin music until late at night.

Following the amputation, General Clark was taken by his lovely sister, Mrs. Lucy Croghan, wife of Maj. William Croghan, to Locust Grove, a few miles from Louisville. There he resided, a helpless invalid, the remaining 9 years of his life.

A day came in the year 1812 when the State of Virginia, through its legislature, voted to present to the old hero of Vincennes a sword as a symbol of that State's appreciation for his meritorious services. An eloquent letter informing him of the action of Virginia was written by the Honorable James Barbour, Governor of Virginia. Gen. Charles F. Mercer, member of the Virginia Assembly, who had introduced the bill, journeyed to Kentucky and at Locust Grove presented the beautiful sword.

General Clark was then old and decrepit, one leg gone the other paralyzed, and all the energy and ambition of his younger days had departed. Earthly honors could be of little moment to him then, as he sat there in his invalid chair and listened to the polished Virginian's eloquent words. He took the beautiful and unsheathed sword and, holding it before him on his two open hands, looked at it long and earnestly. Doubtless at the moment his memory dwelt upon the glories of Kaskaskia and Vincennes * * * it is * * * probable that * * * he said, in a feeble voice, broken by tears, 'you have made a very handsome address, and the sword is very handsome too. When Virginia needed a sword, I gave her one. I am too old and infirm, as you see, to ever use a sword again, but I am glad that my old mother State has not entirely forgotten me, and I thank her for the honor and you for your kindness and friendly words.' "

When Clark was an old man—health gone, a paralytic, one leg amputated, penniless, beset by lawsuits for sums which he had obtained to maintain an American army to hold an American empire, all hope gone—it was then that he made, perhaps, his finest, most patriotic statement. Here is the statement: "By involving myself so imprudently in the public expense * * * I doubt without assistance * * * I shall ever get clear of debt, but a country was at stake, and if it was imprudence, I suppose I should do the same should I again have a similar field to pass through."

On a snowy day, in February 1818, at the age of 66, the sad, lonely, old hero breathed his last.

Memorial Day Address

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address delivered by Hon. John J. Baker, assemblyman of the Commonwealth of Pennsylvania, at Pittsburgh, on May 30, 1945, at the annual memorial services held under the auspices of the Seventeenth Ward United Veterans' Association, the veterans of the Eighteenth Ward Service Men, and Post No. 435 of the Veterans of Foreign Wars:

Reverend Fathers, friends, and neighbors, as we come together to do honor to our heroic dead, I believe we realize that this Memorial Day has greater significance than any other we have observed in our lives. This day was set apart many years ago for us to do homage to the honored dead of the American Civil War, which terminated just 80 years ago this spring.

Eighty years after the end of the struggle between the American States the great European conflict came to an end, a successful end for the forces of men who believe in the emancipation of slavery.

As in the great war between the States the men on both sides of this recent conflict fought for what they thought was the right. Otherwise they would not have been willing to lay down their lives, to undergo the danger and shock of battle, the extreme suffering and missery from the long marches over mountain and plain, the intense discomfort of filthy fox holes, the ever increasing thunder of the great guns and the shattering crash of exploding shells and bombs, the clatter of machine gun fire, the sudden impact of the sniper's bullet.

Many of the boys whose bodies lie in lonesome graves far from their homes and loved ones, are those same boys who were born and grew to young manhood right here in this community.

They have mingled their prayers with ours on this same ground, now doubly hallowed by their sacrifice. They were prepared to meet their God unafraid. They may have flinched in the face of sudden death or mutilation of the body, even as our Saviour asked that the bitter cup may pass his lips, as he suffered on the cross, the eternal souls of these heroes now sup with him in paradise.

As President Abraham Lincoln so eloquently prayed on the battlefield of Gettysburg, it is for us, the living, to dedicate ourselves to the task of completing the work for which our friends and relatives have sacrificed their human lives.

The world has been bathed in a baptism of blood and tears. Many young men who would have made valuable contributions to the progress of civilization have been taken from us. If we who remain have faith in the cause for which they died then we should realize the great task that does lie before us.

That task is the readjustment of our regard for the whole race of mankind. What I have said before, and on a similar occasion, is that the world demands a moral and economic regeneration that should not be longer postponed.

We have a great abundance of scientific knowledge here on the earth. But what we must undertake is the task of reconsidering a great part of the opinions of man and his relations to his fellow man that have been handed down from generation to generation.

Science has advanced through extensive research and application to unheard-of heights. But the materials to accomplish the purposes of science were always present, ready at hand. They were all a part of the original creation of the world. Even the late phenomenon of radar was known from the beginning of time.

The blind bats fly in safety past obstacles which they avoid by means of the natural gift of radar, the use of which has only recently been discovered and put to use by man.

The world is full of the things that we can put to use for the good of man, not in the way of the minerals of the ground alone but the mysterious currents of the air, over which we can speak and be heard in every part of the earth. As we gain knowledge of these forces we harness them for the common good of all. On the other hand, we also use these forces to help destroy one another.

Therefore, what we most stand in need of is another force, which also has been waiting for us to use. We can easily find it. This greatest thing in the world is love. What we can do to make this world a better place for living is the application of love for one another, as taught by our Lord and Saviour, who also gave His precious life for the redemption of the world, as the fulfillment of His mission to bring this important truth to His people.

To put love to practical and effective use, we need to learn how to respect other people, people whose language we may not understand but whose history, culture, and problems of living we may learn.

Through love and understanding our dealings with them may be made more pleasant, more profitable, by becoming more interested in them as human beings, as fellow men, having the same right to exist as we claim for ourselves.

May our enemies receive the same blessing as we pray for ourselves, that greed, selfish national pride, arrogance, and the desire to conquer and destroy shall perish from the earth, that the people who have been placed on this earth through the goodness and mercy of our Heavenly Father may dwell in peace and happiness together.

To God above us may I offer this Memorial Day prayer for our honored dead:

Almighty God, our Heavenly Father, guide, we beseech Thee, the nations of the world into the way of truth, and establish among them that peace which is the fruit of justice. Grant victory to the United Nations and, after victory, peace with order and justice to all the nations of the world.

We remember before Thee on this Memorial Day all those men and women of our community who have given their lives in the service of our country, beseeching Thee to grant them light and refreshment in Thy divine presence.

Strengthen and protect all those who are serving in the armed forces and our country. Support them in the day of battle, and in time of peace keep them safe from all evil; endow them with courage and loyalty, and grant that in all things they may serve without reproach. Amen.

Bretton Woods Is a Maginot Line Against Economic Warfare—Barron's Article Tells How Britain Fences in Foreign Trade

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. BUFFETT. Mr. Speaker, the American people have been assured that Bretton Woods means the end of economic warfare. Like so many other flamboyant claims for this scheme, this assertion is largely created out of thin air.

Paul Wohl, writing in Barron's National Financial Weekly, June 4, seems to explode this notion in a realistic discussion of British trade plans. Members would find the entire article interesting, but to save space, I am only including that part which details how their trade plans go contrary to the freer trade claims of Bretton Woods promoters:

The British, like it or not, have had to take a page from the book of Hitler's former economic adviser, Dr. Schacht.

The British master plan seems to have three objectives: (1) Renew industrial equipment and replenish raw material stocks with the aid of American credits; (2) revamp export industries, cutting out obsolete plants and concentrating on lines of production which require a minimum of imported raw materials; (3) develop a system of financial and industrial agreements which would weld the nations of the sterling bloc and other capital-poor countries into an almost self-sufficient combination, absorbing roughly three-quarters of the world's imports and two-thirds of its exports.

While the British goal is very different from that of militaristic Germany, which was not so much interested in expanding her exports as in preparing for war the three phases of the operation are the same.

The Germans needed American capital to build up new industries and to make existing ones more efficient. They offered very favorable conditions of investment. Eventually, their coal mines were more mechanized than those of the United States, and their largest strip mill turned out broader sheets of steel than any American mill up to the war. They managed to accumulate substantial stocks of industrial raw materials on credit.

The British today are in need of even greater quantities of American raw materials and machines. Many of their industries have to be overhauled completely. Their coal mines, with an output less than two-thirds of that before World War I, must be equipped with modern hauling, cutting, and loading machinery. Everywhere, the wear and tear of more than 5 years of war calls for replacements on a very large scale. The amounts involved are so vast that Britain will have to finance at least part of her imports from America through direct loans, once the Johnson Act is repealed, or through the International Bank provided in the Bretton Woods plan.

* * * * *

Before the war, most of Britain's progressive export industries had production and market agreements with their opposite numbers on the Continent. There are many indications that agreements of this kind also will feature in the financial side of Britain's postwar plans.

Just as they supported Germany's barter and clearing scheme, they may help to cement the sterling bloc. The origin of this financial system, under which sterling surpluses arising out of commercial transactions between Britain and other countries are blocked in London, is similar to that of the financial system of Dr. Schacht. The motive in Britain's case was legitimate defense, while the German motive was to obtain political control of foreign countries by making them economically dependent on Berlin. Yet, the effect is more or less the same.

In both cases it was stipulated that deliveries will not be paid in free exchange, but in credits of which at least part cannot be transferred and which the creditor country can mobilize only by making purchases in the debtor country. Today these blocked sterling balances in London are reported to be closer to 2,000,000,000 than 1,500,000,000. They represent commercial claims held not only by members of the British Commonwealth but also by such independent countries as Argentina, Brazil, Chile, Egypt, Iraq, Peru, Portugal, and Uruguay.

As previously stated in Barron's, this "cobweb of British clearing and payments agreements" recently has been extended to Belgium, Sweden, Switzerland, and France. Similar pacts with Holland, Norway, and Turkey are in preparation.

While some of the older commercial debts may be funded or, as far as Empire nations are concerned, canceled as an additional contribution to Great Britain's war effort, there can be no doubt that in her relations with independent countries, Britain will have to pay her debts mainly in goods and services. Unless she can obtain large dollar balances through loans or greatly increased exports to America, which in turn would entail a substantial cutting of our tariff, Brittain's only way out of this predicament is to make payment of her commercial debts dependent upon placement of orders with British industries.

In countries which have linked their currencies to that of Britain, especially in the Middle East, her position is even stronger than was that of Germany under Dr. Schacht. Commercial interests there find it impossible to place orders in the United States or other countries outside the sterling bloc without London's consent. An Egyptian importer, for instance, can purchase goods in America only if he is able to obtain free exchange, and the granting of this exchange is made dependent on the approval of the projected deal by London. In every case where the commodities the Egyptian wishes to import can be obtained at the same price from Britain, a deal with a nonsterling country is out.

* * * * *

Directed from London by far more subtle methods than the one the Germans tried to organize within their sphere of trade, it would not only be more effective, because British political interference would be less obvious, but also because it would extend to a far greater number of countries with more variegated resources and needs. Eventually, it might cover such a large portion of the world's foreign trade and include so great an industrial capacity (many times that of Britain) that there would be little room for an expansion of American commercial exports or even their maintenance on prewar level. The only way for the United States to bolster its exports would then be to finance them by supplying prospective buyers with the funds for which to pay for American goods or services—not exactly a commercial operation.

Six Months Vacation at Government Expense

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, one of the problems which this Congress will probably have to face, is whether or not we shall provide appropriations to pay untold thousands of people a gratuity of $25 per week for 6 months.

Patriotism was the motive that actuated many of our defense workers, and only praise and appreciation of their efforts should be expressed. But there are many thousands who worked in the defense plants with the highest wartime wages ever known, with gasoline, tire, and other priorities granted them, with deferments which kept them out of combat or other military duty and performances, who have been enabled to save money and lay by a nest egg for their old age; who are not entitled to further preferences, or bounties from the public treasury.

Compare with this latter group—and the number is all too large—those who voluntarily enlisted or were drafted into the armed forces and have performed so heroically for only nominal compensation. Thousands of those have died of battle-inflicted wounds. Hundreds of thousands will carry the scars of war to their graves; and among these are untold hundreds whose future economic efficiency has been tremendously impaired.

What will our returning veterans think of our paying, without discrimination, all who have worked for these fancy wages and salaries in the war industries, a 6 months' vacation at the rate of $25 per week? Are they not justified in condemning such an idea, and will they not be justified in severely criticizing all who are responsible for any such proposed appropriation? It is reported that 3,000 former prisoners of war have already demonstrated their opposition in a parade they staged last Saturday in Paris, France. An account of this appeared on the front page of the Washington Sunday Star of June 3, 1934, which I quote:

FORMER WAR PRISONERS SNARL TRAFFIC IN PARIS

PARIS, June 2.—Three thousand former prisoners of war, most of them wearing the ragged uniforms in which they left for the front in 1940, snarled traffic in the Place de

Concorde and Champs Elysees today, marching with banners reading:

"Three months' vacation with pay," "Decent clothes and boots," "Three thousand francs a head for each year of captivity," and "Purge the black market and war profiteers."

The demonstration was orderly.

What about the farmers who have so nobly attempted to furnish an adequate supply of food for the armed forces and the civilian populations of this country and of a large portion of the world, with hampering bureaucratic regulations under which they have had to work? What will the so-called white-collar group, whose salaries were frozen and whose pay could not be increased by their employers, who have worked longer hours under greater pressure than usual, have to say about such discriminatory favortism? What will be the reaction of the taxpayers when they find themselves forced to pay the bill? Please do not forget that this bill will be paid out of borrowed money. It will put Uncle Sam and his family still further in debt. All of the people, including the returning servicemen, will have to bear part of this load during the remainder of their natural lives. It will be a large bill, and will require sacrifice on the part of millions of people, to pay it.

Mr. Speaker, this subject is being discussed far and wide over the entire country, and we should consider very carefully the appropriation of any public fund of our Government borrowings before we vote for such an expanditure. It is a form of pampering that cannot be justified.

A very appropriate editorial appeared in the Bartlesville (Okla.) Enterprise of May 29, 1945, which I am pleased to quote, as follows:

I'm not very hot about President Truman's plea for federally financed jobless pay during the reconversion period. It smacks too much of the same old thing we have had in great gobs and doses for the past 12 years. He pleads, in his message to Congress, that there will be an unemployment gap during the reconversion period.

His plea sounds screwball to me on two points: 1. We have been consistently told for the past 5 or 6 years by the administration that the big idea of high wages was so workers could accumulate a nest egg to tide them over any temporary unemployment gap. If this long and often-repeated statement isn't wholly fallacious, then this argument won't hold water. 2. There is lots of work just beginning to be done. Sure, not at $100-a-week wages of wartime Government spending programs but at decent, livable wages.

I'll bet my hat that a minimum of 500 men could find work—skilled, semiskilled, and plain old day labor—right here in this little community for a period of 6 months to a year doing the repair jobs and the other million and one things that have gone undone since December 7, 1941.

Of course, if we are going to proceed on the premises that a man or woman can only work—and will work only—in a wartime assembly line, then Mr. Truman's argument might hold water. But can we plan an America of tomorrow where people must find exactly the type of work at exactly the rate of pay they want or else be put on the public pay roll for doing nothing without making a shambles of what we've been fighting for? I doubt it.

There probably are as big a percentage of business owners who would also like to prowl in other and greener fields—something more to their liking—as there are of pay-roll workers who want a particular kind of a job at a particular rate of pay. But they carry on because, having been in business, they know something of the operation of economic laws and know that there is no Utopia where everyone can do just as he pleases and just when he pleases with the assurance that if he isn't happy in what he's doing the great white father in Washington will see that he's taken care of anyway.

There are plenty of jobs for all in the reconversion interim if the American people as a whole and if the administration at Washington have the wit to see it without going off the deep end of jobless pay, which has too many political implications to suit me as well as a further pandering to man's worst inherent fault—plain, garden variety laziness.

In the final analysis, the Truman proposal is nothing less than an open invitation to the men and women who drew the fattest wartime factory pay in history to profit still further by taking a 6-month vaction on $25 a week pay. Wonder how the fighting men like it?

Come, come, Mr. President. Most of the things you have done up to now have made sense with most folks. But this one won't, I am sure.

Nobody, I am sure, really wants to see anybody working at starvation wages at any time. But in America there are jobs for all if we have the wit to make them instead of resorting to the old Rooseveltian leftist theory of a central government assuming all the responsibility for everybody, whether they are willing to work or not. After all, the Government is the people and we can't continue to attempt lifting ourselves by our bootstraps. It takes honest sweat and honest toil at fair wages to return America to sanity. The sooner the great masses understand this thing, the better off we all will be. The leadership in this direction must come from Washington, and I am sorry to see such poor leadership being exhibited by the new President at this juncture.

Possibly he has been listening too much to pressure groups. Maybe he is just plain misinformed and misguided. Whatever it is, I am sure he will hear from others as well as from me, unless we have become a Nation of spineless nitwits who are willing to sell any and all of our brithright for a fantastic mess of pottage such as the Truman scheme envisions.

As an illustration of the thinking of the fathers and mothers of sons in the service and of our everyday run of citizens, who after all, are the stabilizing element of our population, I am pleased to quote the following from a letter which I have just received from one of my constituents living in the town of Ramona, Okla.:

Considering the past, in which these workers have really been the favored class having received priorities on auto tires and gasoline, about the highest wages of any class, ranging generally from $160 to as high as $300 and $400 per month and where two or more members of a family are doing such work, sometimes $700 to $800 per month, it seems unfair to me to tax and burden the rest of the Nation for such purposes. My son, as other boys and young men have done and are doing, have faced death on the battlefields for much less remuneration. If they are fortunate they will return home and help carry the burden of debt for such class legislation if same is enacted.

I trust you will use your influence in defeat of this and like measures. I am not opposed to governmental aid and control to prevent a recurrence of the calamities of 1920 and 1921, which broke and ruined so many of our good citizens financially. A high national income from useful production and services should be our goal and aim and not an income by artificial, governmental priming and temporary relief.

Hampton Pitts Fulmer

MEMORIAL ADDRESS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. HAMPTON PITTS FULMER, late a Representative from the State of South Carolina

Mr. HARE. Mr. Speaker, the reaper of death has no particular harvest season; he is busy every hour of the day and every day of every year executing orders of the Creator; he makes no compromises and permits no delay in the execution of orders as planned. Since our last Memorial Day he appeared and removed our friend and colleague, the Honorable HAMPTON P. FULMER, who successfully served 12 successive terms in the Congress and was renominated without opposition to serve in the Seventy-ninth Congress. He was stricken and died suddenly in his home here in Washington, October 19, 1944, lacking only about 2½ months of continuous service of 24 years.

Mr. FULMER was a man of many parts. He was born on a farm near Springfield, S. C., June 23, 1875, about 10 years after the close of the War Between the States, a time when there were few and limited opportunities for higher education in our section of the country. His academic training, therefore was confined almost exclusively to that furnished in the public-school system of the State. However, he was endowed with unusual natural ability and applied himself to the mastery of many lines of work. Before being elected to Congress in 1920 he had demonstrated his ability as a farmer, merchant, and banker. He had wide and varied experience in all these activities and had marked success in each. He knew people; he knew their virtues and political reactions; he knew their problems and was, therefore, fitted by training and experience to represent them in the Congress of the United States.

During his stay here he gave the country the benefit of his wide and successful experience by devoting his talents, energies, and efforts largely to legislation dealing with agriculture or farm problems. As a member of the Agriculture Committee for 20 years and as chairman of the committee for the past 4 years he aided and assisted, or engineered through the committee and the House of Representatives all worthwhile legislation relating to agriculture enacted by the Congress within the last quarter of a century. One of his outstanding contributions to the cotton farmer, the cotton trade, and the public

generally was when he sponsored and became author of the United States Standard Cotton Grading Act, standardizing the grading of American cotton, now acepted by the users and manufacturers of cotton throughout the world.

Mr. FULMER was a man of strong conviction and always alert and loyal to the interests of the people he represented. His devotion and loyalty to those engaged in agriculture stand out as one of the great virtues and characteristics of his political life and in his death that great group of people who live by the products of the soil have lost a loyal friend.

I know how much Mr. FULMER regretted the lack of opportunity in early life to obtain additional school training which he felt would have aided him in fulfilling his mission in life, but his success both in business and public service well illustrates the possibility of unusual accomplishments by honesty, ambition, hard work, and application to an ideal despite the number of difficulties and obstacles to be overcome; it illustrates further that the greater the difficulties and obstacles met and overcome the greater the manhood may be developed.

It was my privilege to know Mr. FULMER a number of years before he became a Member of this body; I served with him here for 14 years and learned to admire and have great respect for his dependable and sound judgment. The sudden call to his reward is a source of great sorrow and grief to those of us who knew him. He was a man of fine character, many virtues, and with few, if any, faults.

Francis Thomas Maloney

MEMORIAL ADDRESS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character and public service of Hon. FRANCIS THOMAS MALONEY, late a Senator from the State of Connecticut.

Mr. LUTHER A. JOHNSON. Mr. Speaker, prior to his service in the Senate, Senator MALONEY was a Member of the House, and it was my privilege to have served with him.

The first time I ever met him was in Connecticut, in 1932, when I was campaigning in behalf of Franklin D. Roosevelt and the Democratic ticket in Connecticut. Senator MALONEY was at that time mayor of the city of Meriden, and was a candidate on the Democrat ticket for Representative in Congress, and was elected.

From contacts which I made in Connecticut at that time, I soon learned of the popularity of Mayor MALONEY, and this was demonstrated by the fact that he was elected to Congress at that time, notwithstanding the fact that Roosevelt and the Democratic national ticket were defeated in Connecticut.

Our acquaintance ripened into a warm friendship during his service in the House, which continued after his election to the United States Senate.

There was no harder working or more conscientious Member of the House and later, of the Senator than Senator FRANCIS MALONEY. He had the confidence, esteem and affection of his colleagues in both bodies. His death was a great shock and a great loss to his State and Nation, and I am glad to pay this brief tribute to him, for his passing is a distinct personal loss to me.

Hampton Pitts Fulmer

MEMORIAL ADDRESS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. HAMPTON PITTS FULMER, late a Representative from the State of South Carolina

Mr. RILEY. Mr. Speaker, on October 19, 1944, I was shocked and distressed to learn of the sudden and unexpected death of my lifelong friend, the Representative in Congress from my district for almost a quarter of a century, HAMPTON PITTS FULMER, of Orangeburg, S. C. Diligent, able, and devoted to his task, he spent long and tedious hours carrying on the work of his district and promoting agriculture as a whole, until he eroded his health and caused the slender thread of his life to snap.

"Hamp," or "Uncle Hamp," as he was affectionately called by all who knew him—and there were thousands—desired above all else to see the farmers of his State and his Nation protected and enlightened as to the best methods of producing and of marketing their products. How well he succeeded is attested by the fact that he served in the Lower House of Congress longer than any other man from my State, to this date. How fine were his abilities is evinced by the fact that he rose to be chairman of the powerful Agriculture Committee of the House of Representatives, a position held by only one other Representative from my State and by few others from the entire South.

His tenure of service was during a most trying era. Starting his national career shortly after the last war, he toiled through the great agricultural and economic crises of the deflation period of the early 1920's, through the depression period of the 1930's, and through the most critical years of the greatest war in history. Such major legislation as the Agricultural Adjustment Act, United States Cotton Grading Act, National Forest Land Management Act, and Federal crop insurance were harvested from his labors. Using the agencies and procedures which Mr. FULMER helped to create, the farmers of our Nation have more than done their part in producing food and other critical agricultural products, without which success could not have been attained over the most powerful and ingenious enemy in our history.

Wherever in these United States the sower goes forth to sow, wherever the plowman wearily plods his way homeward when the day's work is done; wherever cotton is picked or grain is cut, the work and achievements of HAMPTON P. FULMER will bless his fellow man even after his name, now well known, will have faded from memory.

It is fitting that today, the one hundred and fifty-seventh anniversary of the ratification of the Constitution of the United States, by my beloved State, that we pause humbly in our daily tasks to pay tribute to one of her distinguished sons and to extend sympathy to his loved ones. May He who guides the destinies of men give us here on earth others of the mold of HAMPTON P. FULMER.

Full-Employment Bill of 1945, H. R. 2202

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. OUTLAND. Mr. Speaker, a distinguished former Member of this House, now assigned by statute the responsibility for reconversion of our entire economy from war to peace, has after careful study and consideration endorsed the purposes and principles of the full-employment bill of 1945, H. R. 2202, originally introduced by the gentleman from Texas [Mr. PATMAN], since joined in sponsorship by 68 other Members.

I know that many Members of the House will want to study the endorsement given H. R. 2202 by Judge Fred Vinson, Director of the Office of War Mobilization and Reconversion, and I therefore asked unanimous consent to insert in the RECORD at the conclusion of my remarks the text of Judge Vinson's letter to Senator ROBERT F. WAGNER, chairman of the Senate Banking and Currency Committee, which is shortly to begin hearings on this vital piece of legislation to insure freedom from want after final military victory.

I wish to call particular attention to Judge Vinson's final paragraph which, in effect, is a challenge to the Congress to accept and discharge its constitutional responsibility for the formulation of national policy, in this instance for the maintenance of full employment after the war. I hope and believe the Congress will accept this policy and accept it in time, so that it will not be necessary, in the midst of a new and worse depression, for the executive branch to work out emergency programs to arrest the spread of unemployment, hunger, and

evictions, as unhappily was necessary 12 years ago.

We of this House who believe this bill is a necessary and practical first step toward insuring full employment are determined to promote the widest possible understanding of its purposes and its provisions, what it would and would not do, to dispel the effect of misrepresentations, so that, when the bill comes to hearings, debate, and final action, necessary perfecting amendments shall have been made, the greatest possible public appreciation of its purpose will exist, and favorable action here can be followed swiftly by effective administration. Thereby we will reduce the length and difficulty of the vast, yet delicate, job of changing over from an economy of full production and employment for war to full production, consumption, and employment for peace.

It is very late to prepare for a peace of full production and employment. But it is not too late. If we of the Congress act with the dispatch which the times demand, the curve of unemployment inevitable in the change-over of between fifteen and and twenty million servicemen and war workers to peaceful employment can be on the downgrade by the time of primaries and the final elections of 1946, when every one of us must face our constituents and answer to them for our action or inaction on this vital issue. As Judge Vinson so well says, this issue is second only to a speedy and complete victory over Japan. It will continue to be an issue until we meet and solve it—and the sooner, the better for all concerned.

DEAR BOB: This is in response to your letter of April 9 concerning S. 380, a bill "to establish a national policy and program for assuring continuing full employment in a free competitive economy through the concerted efforts of industry, agriculture, labor, State and local governments, and the Federal Government."

Next to a speedy and complete victory over Japan, a steady, well-paid job after the war is first in the minds and hearts of most Americans. The war has demonstrated that our economic system can provide jobs when demand for its products exists. It has done more. It has opened the eyes of all of us to the vast productivity of which American labor and the American genius for organization and management—working as a team—are capable.

But these jobs—this productivity—has been achieved in wartime through the creation of an unlimited market by the Government. To reach and maintain high levels of employment and a steadily rising standard of living in peacetime will call for a program suited to peacetime conditions and needs. In this program, business, agriculture, labor, and local, State, and Federal Governments must all play their parts.

We know we have an abundance of resources, plant, manpower, and managerial know-how to produce a standard of living far higher than anything we have ever known. Likewise, we know that we have unfilled needs in America so diverse and so great as to challenge the capacity of even the greatest producing Nation on earth.

But needs are not demands, in the economic sense. People must have steady income and they must want to spend their income before needs become demands and people become customers.

Business management, large and small, has a great opportunity and a great challenge to help create these steady incomes, and to actuate demand by expanding their businesses, offering better goods and services at attractive prices. Labor and agriculture through their efforts to increase production per man-hour can contribute importantly to higher incomes and a higher standard of living.

But history shows us that business, labor, and agriculture cannot in themselves assure the maintenance of high levels of production and employment. The Government, acting on behalf of all the people, must assume this responsibility and take measures broad enough to meet the issues. Only by looking at the economy as a whole, and adopting national economic policies which will actively promote and encourage the expansion of business and the maintenance of markets and consumer spending, can we hope to achieve full employment. S. 330 recognizes this responsibility of Government and seeks to provide a definite vehicle for the Congress and the President to measure the size of the employment need of the country and to provide specific programs for meeting it.

It would be idle to pretend that it will be easy to reach and hold full-employment levels. It would be folly, on the other hand, to pretend that it is impossible. The American people will not be content to go back to protracted large scale unemployment. It is imperative that we find ways and means to provide jobs for those willing and able to work. Depressions are not acts of God, any more than wars are. They are the product of our man-made institutions and the way we organize our society. We can and must organize to prevent both.

We must be prepared to make changes. At the same time we must be jealous of any encroachment on our freedoms. National economic policies must not be allowed to develop into regimentation of business, or labor, or agriculture, nor of the people. Direction of private output by public authority in peacetime is repugnant to American ways of thought. Instead the maximum possible freedom must be afforded every producer to produce what he wishes, in the amounts for which he can best find a profitable market. Given an adequate market, our producers will supply the goods and the employment. We can be sure of that.

We cannot, however, leave the creation of that market to chance. We must start now to find out what measures are needed to maintain markets and steady jobs. S. 380 does not profess to present a fully conceived program for the achievement of full employment. It is the necessary first step from which a full-dress program of economic policies to promote the well-being of our free competitive economy will stem.

As a former Member of Congress, I have certain general reactions to the bill. I regard it as desirable that such a bill should limit itself to providing the machinery to be followed to assist in arriving at national policy and full employment, rather than attempting to specify in advance policy measures to be used to meet future conditions. I believe it wise to leave to the President full discretion in the matter of preparing estimates of the national production and employment budget. And I regard the consideration of proposed measures by a congressional joint committee, which can analyze the interrelationships between the various matters of special concern to the House and Senate committees represented, as an important step in the process of preparing national policy to maintain full employment.

I heartily endorse the purposes and principles of the bill.

Sincerely,

FRED M. VINSON.

Training of Wisconsin Veterans in the Field of Agriculture

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, my attention has been called to a most interesting training program for Wisconsin veterans.

It seems that under the direction of O. W. Price, Chief of the Vocational Rehabilitation and Education Division of the Veterans' Administration, located at Wood, Wis., veterans of this war are being trained in the field of agriculture. It is a privilege for me to offer as a part of my remarks an interview between Mr. Arthur Page, associate editor of Prairie Farmer and Mr. Price, over radio station WLS, Chicago, Ill., on May 15.

At a time when every Member of Congress is interested in the rehabilitation of our men who have done the fighting for us, I am sure that Members will find this radio interview very enlightening:

Mr. PAGE. At the close of the war we will have some 13,000,000 veterans, most of whom will be entitled to free education or training at Government expense. Many of them were on farms when they went into service. What is being done for them, and what is planned? To answer these questions, we are pleased to have as our guest today Mr. O. W. Price, Chief, Vocational Rehabilitation and Education Division, Veterans' Administration, from our sister State of Wisconsin.

Mr. Price, do you think that there will be many veterans who will want to return to farms or take up farming? You recall that old song they sung during the last war, "How're you going to keep 'em down on the farm after they've seen Paree?" Now how are you going to keep 'em down on the farm after they have seen Africa, Europe, Asia, the South Sea islands, and all other points of the compass?

Mr. PRICE. I agree, that some of these World War II veterans will be world travelers in every sense of the word and will have some difficulty in settling down after they return. However, many of them will be so tired of traveling that they will be only too glad to settle down to the peace and tranquillity of farm life. It is estimated that four-fifths of farm youth in service will return to farming and that there will be a considerable number of city youth, possibly too many, who have learned to like the great outdoors while in the Army and will want to take up farm life. Love for Mother Earth, love for animals and growing things, and a life of quiet independence, sort of gets into a man's bones, and a fellow who has spent most of his life on a farm and likes it doesn't change easily. Right now there is a noticeable trend away from the farm among veterans, however I do not believe that this will continue. I am inclined to think that there will be a back-to-the-farm movement after the end of the war.

Another reason is the loan feature of the GI bill which will make it possible for thousands of veterans to buy farms, and on better terms than anyone else has ever been able to buy. If a veteran can talk some Federal agency, such as the Farm Security Administration, into a first loan, the Veterans' Ad-

ministration will, under certain conditions, guarantee the entire amount of the second loan. The loan features of the GI bill should greatly stimulate farm ownership.

Mr. PAGE. Do you think that veterans should be urged to stay away from farming?

Mr. PRICE. I do not. There are about 1,000,000 farm youth in the armed services. Many of these should return to farm life. The World War II veteran represents the best brains, brawn, and skill in the country. Agriculture needs him. Let me put it this way: Farming is the lifeblood of the Nation, and by the end of the war it will need new blood—a transfusion. The returning veteran will furnish it. For many years now the farm has been losing many of its fine young men to the city.

In Wisconsin, for example, a survey made for Governor Goodland last year showed that in this State one-third of the 186,000 farmers are 55 or more years of age. The war over, the land-planning agencies figure that many of the 62,000 older farmers will want to retire; that some 50,000 farms will be for sale. Many of these farms are among the best in the State, so I would say that the outlook for the returning GI is good in Wisconsin. We expect to train some very fine farmers among the veterans. There is grave danger that prices may get out of hand and something may have to be done to prevent it.

Mr. PAGE. Of course, many veterans will take up training in jobs related to farming.

Mr. PRICE. Yes; we have veterans who are being trained as general farmers, dairy farmers, cheese makers, poultry farmers, bee keepers, dairy herdsmen, farm managers, agricultural agents, agricultural engineers, nurserymen, veterinarians, soil specialists, dairy testers, milk inspectors, teachers, plant pathologists, farm mechanics, implement salesmen, etc.

Wisconsin has many lakes and considerable State and United States forestry areas. We expect a considerable number of veterans will be interested in the various types of conservation jobs. There is also the great field of service occupations which serve the farmer.

Mr. PAGE. I understand that you have some veterans in training on the farm. Tell us about this method of training.

Mr. PRICE. That is right. So far, I believe that we have the only ones in the entire country.

Mr. PAGE. Just how are the selections made?

Mr. PRICE. We may find in counseling with the veteran that he has aptitude for farming, that he has a farm or knows of a farm which would provide the type of training needed and that he is the type of person who would profit more by personal instruction on the job than by going to school, or he may have finished a course at school and is now ready for practical instruction in farming.

Ours is an individualized program with special emphasis on what is best for the particular veteran. We send a training officer, who is a specialist in agriculture, to make a detailed survey of the proposed farm in order to determine whether it lends itself to a satisfactory training program.

We only approve family-size farms, that is, farms that are large enough and good enough to be economically sound from which he can earn a sufficient income to keep his family in comfort and health, to educate his children and to integrate himself into the community as a happy and useful citizen. We are opposed to putting veterans on so-called marginal land and oversized city lots of a few acres where they will later starve out when Government assistance is removed. We are also not in favor of colony farms for veterans. These were tried out after World War I, and were found very unsuccessful. I have reference to some of the "Veteransvilles" which were complete failures.

If the farm is approved, the training officer then prepares a detailed training program, listing the various farm operations in which he is to receive instruction. A budget is made up, and the veteran keeps detailed records of his income and outgo, as well as records of all of the things which he does while in training. We then arrange, under a contract with the State board for vocational and adult education, for the local Smith-Hughes agrictultural teacher to visit the veteran at least once each week and to give him personal instruction in the operation of the farm.

He also attends any courses given for local farmers, and uses the shop facilities of the local school. If possible, he attends one of the farm short courses held during the winter months at the university. He may also be provided with home study courses from the extension division of the University of Wisconsin. Books and magazines needed are furnished by the Veterans' Administration. The veteran is visited by a training officer from the Veterans' Administration once each month, who checks up on his progress and assists him with his training.

He is encouraged to take part in all community affairs, farmers' associations, etc., and become an integrated part of the community. We have a few veterans in this type of training who are doing exceptionally well. For example, a 25-year-old ex-private first class near Gleason, Wis., who is on a rented farm with 110 acres of tillable land and 200 acres of pasture. He has the beginning of a nice herd of dairy cattle.

Then we have a former paratrooper with a bad head injury in training on his father's farm near Appleton. Upon completion of training, he will take over the operation of the farm.

I also recall a veteran who found it impossible to adjust himself to university life because of a serious diabetic condition. A training project was set up for him on a farm near Wilton, Wis., where he was able to make good adjustment.

Another young veteran, with a crippled arm, near Menomonie has made wonderful progress and is about ready for rehabilitation. He has a fine dairy herd started and will do well on the farm he has purchased.

There are some people who contend that the only place to learn farming is on the farm. Ordinarily, we would prefer that the veteran take 1 or 2 years of instruction at a good agricultural school to be followed by training on the farm.

Mr. PAGE. I know that the University of Wisconsin has fine courses in agriculture for high-school graduates. Have courses been established for veterans who have less than a high-school education?

Mr. PRICE. Yes. Recently the University of Wisconsin restored its 2-year terminal courses in agriculture. We also have practical courses at Platteville and River Falls State Teachers Colleges. These two schools operate farms in connection.

Mr. PAGE. A few minutes ago you referred to training veterans to be farm mechanics. What are the possibilities along this line?

Mr. PRICE. The possibilities are very good. A survey made by the Implement Dealers Association last year showed that there was an acute shortage of farm mechanics. Every dealer needed one or more. Throughout the smaller towns there are good opportunities for all-around mechanics who can fix a tractor, a cream separator, do repairs to houses and barns, etc.

We have two such courses—one at the Racine Vocational School and the other at the Platteville State Teachers College. These are general courses which include blacksmithing, welding, machine-shop practice, woodwork, etc. Practical work is done on farm machinery in the community. The institutional training may be followed by training on the job, where they acquire the necessary skill to become expert mechanics.

A recent survey made by Prof. F. W. Duffee, chairman of the agricultural engineering school at the University of Wisconsin, showed that there are 19,840 farms in Wisconsin that were in need of major repairs to their buildings. He estimated that a total of $150,000,000 would be necessary to install such comforts as bathrooms, furnaces, electricity to make their homes modern and comfortable, so you see there is a splendid opportunity for well-trained veterans to go into business for themselves and sell their services to the farmers.

Mr. PAGE. Wisconsin is a great dairy State. Do you expect to train veterans for jobs related to this industry?

Mr. PRICE. Yes. It is expected that many of the veterans will find jobs of this kind. Some are being trained at college and some on the job. We have a former Air Corps sergeant who served in Africa and Italy. This veteran, after a short training period at the University of Wisconsin, now is in training on the job as a dairy herd tester with the Dairy Herd Improvement Association of Jefferson, Wis. Then we have a 28-year-old exsoldier who sustained a 30-percent leg injury in combat who is being trained as a milk inspector with the Cooperative Badger Consolidated Milk Plant at Shawano, Wis. Another 33-year-old veteran who came here from Germany at the age of 16 is being trained as a dairy herdsman with the Bo-Cann Farms at Fall River, Wis.

Mr. PAGE. Do you find some city-bred veterans who have a so-called romantic attachment to the farm?

Mr. PRICE. Yes. We do not approve a veteran for training as a farmer unless he had been raised on a farm, or has a very definite interest in being a farmer. Some people do not know how much hard work and how much skill is required in order to be a successful farmer. A very high degree of technical skill is needed nowadays. If married, we ascertain whether the wife likes farm life. This is very necessary inasmuch as the prospects of making a good farmer might be spoiled if he has a wife who would not be satisfied with life in the country.

Mr. PAGE. Are the various courses which you speak of open to veterans under the GI bill the same as for handicapped veterans, and where should veterans write or inquire who might be interested?

Mr. PRICE. The courses which I speak of are open to both types of trainees. World War II veterans should communicate with the nearest office of the Veterans' Administration in the State in which they are located. In Wisconsin the regional office is at Wood, with branch offices at Milwaukee, Eau Claire, Madison, and Green Bay.

Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over radio stations WJMS, Ironwood; WHDF, Calumet; WDMJ,

Marquette; and WDBC, Escanaba, May 4, 1945:

Friends and neighbors in the Twelfth District, during the last 4 years, 4 long years of war, all of us have made heavy sacrifices to bring the war to an end. We have worked and prayed as never before for victory and peace. Many of you have given sons or brothers or husbands to that cause. That sacrifice of life, the sacrifices still to come, must not be in vain. All of us must pay our debt to the dead and wounded who purchased victory for us so dearly.

We learned at bitter cost, after the last war, that peace is not easy. In many ways it is more difficult, more complex, and more uncertain than the waging of war. For 20 years, between the two World Wars, the enemies of peace haunted the capitals of the world unrecognized. This time we must be wiser. We must not be brought to the brink of disaster again by our refusal to recognize the causes of war.

Because of the widespread devastation abroad, of the total political and economic collapse of many countries, the job of peace will be almost unbelievably complex and difficult. It will demand tolerance and patience and understanding on the part of all of us.

Tonight I want to discuss with you one of the bills now before Congress which I believe will aid immeasurably in laying the foundation for a just and lasting peace. This is the Wagner-Spence bill, which incorporates the proposals of the so-called Bretton Woods agreement. This agreement, under the official title of the United Nations Monetary Conference, was signed last summer in the little New Hampshire town of Bretton Woods by delegates from the United States and from 43 other nations. It has been put into legislative form and introduced in the Senate by ROBERT WAGNER and in the House of Representatives by Congressman BRENT SPENCE, of Kentucky.

What the Bretton Woods agreement does is to lay the groundwork for jobs at home and peace abroad. Of course, the agreement standing by itself will not bring full employment at home nor prevent wars for all time. As our late President, Franklin Roosevelt, described it in his special message to Congress urging its enactment into law, the agreement is "the cornerstone for international economic cooperation." He called its proposals "part of a consistent whole, * * * a whole that is our hope for a secure and fruitful world."

A great deal of hocus-pocus has been written about the Bretton Woods agreement, and because most of us are pretty uninformed about international economics a lot of this hocus-pocus has been accepted as sound reasoning.

I think all of us are a little too inclined to let someone else worry about the things we consider to be over our heads. But this very timidity and "let George do it" attitude about this particular legislation is dangerous because the ratification or rejection of the Bretton Woods agreement by the Congress will touch our lives very intimately in the years after the end of the war. It is not only a bread-and-butter question for workers and consumers here in this country; it may very well contain the answer to the question of whether or not or when we fight World War III.

I don't believe there is very much doubt in anyone's mind now about the direct relationship between the great world depression of the thirties and the World War into which we were drawn in the first year of the forties.

In all of the great manufacturing countries of the world—including the greatest of them, the United States—production fell off almost to a standstill in the thirties. What this meant in the international field was a mad scramble for new markets, for greater exports and fewer imports.

Artificial respiration in the form of high tariffs, of currency devaluation, of trade quotas, and other devices to limit importation of foreign-made goods, was applied by the individual countries to revive their world markets. I don't have to tell you that these devices didn't work; their failure was felt in your own town—in mines shut down, in bank and business failures, in ghost towns.

Now, of course, this very unstable economic condition—we called it depression—was good business from the point of view of some banking interests who made profits from the frantic efforts of entire nations to adjust to the loss of their markets.

The international bankers and financiers did not lose on the bankrupt and abandoned business enterprises here and in most of the countries of the world. The people who lost were the men and women who were thrown out of jobs; the men and women who invested their savings in businesses that were swallowed up in the bottomless pit of world-wide depression.

World trade actually never did recover from the depression of the thirties. It has been for almost a decade now living on the goods of war. When the war is over, when shoes and blankets and automobiles, and corn and tobacco replace guns and tanks and planes in the cargo space going to Europe and all the ports of the world, we will be involved in the same cutthroat competition for markets unless plans are laid now to stabilize world trade. This stabilization must be through controls over the moneys and methods by which trade is conducted.

Before I go into the specific details of the agreement, I want to emphasize the over-all objectives of the nations who drew up the agreement.

Their first desire was to prevent the kind of financial and economic aggression that helped Germany and Japan build their military machines. What they sought was the creation of a healthy world economy in which the virus of economic piracy and tyranny could not survive; a world economy in which Germany could not drain the resources of weaker neighbor states to build her war machine, or in which Japan could not drive China to the point of inflationary collapse to feed her dreams of empire.

The agreement seeks to achieve a balance, not only in monetary terms but in terms of exchange of goods and materials so that nations and peoples may prosper and live together instead of fighting and dying together.

The Bretton Woods agreement does not provide a solution for all the economic conflicts among the countries of the world; in itself it is not a sure guarantee against war. But, because it sets up controls over one of the chief causes of war—economic rivalry—it is an important and necessary step toward permanent peace.

Essentially what the Bretton Woods agreement proposes is the creation of two international cooperative organizations; the International Bank for Reconstruction and Development, and the International Monetary Fund.

The purpose of the bank is to help the war-devastated countries of Europe and Asia in their programs of reconstruction. It is also designed to aid in the development of backward countries so that they may not be a drag on postwar world economy. The bank will function through long-term loans among nations.

These purposes of the bank make good sense from our point of view because, when our war-production program becomes a peace-production program after the war, this country will have to export something like $10,000,000,000 worth of goods if we are to have anything like full employment.

Most of the countries of the world have been stripped of their ability to pay for American goods unless they can borrow the money on a long-term basis. A great deal of this necessary borrowing for postwar purchases can be made through private banks and financiers, but firms in most of the countries that have been impoverished by long years of war cannot put up guaranties to secure private loans at a low rate of interest. This is the function of the bank. It will add its guarantee if the borrowing firm is sound, if its project is endorsed by the government of the country in which the firm is located, and if the rates of interest and amortization schedules are reasonable.

The bank may also make direct loans through selling its securities in a member country and lending directly to the borrowing firm, or it may lend directly from its paid-in capital.

The first function, however, that of guaranteeing private loans with reasonable rates and terms of payment, is its primary function and the one which will most widely be used.

The best example of working of the International Bank for Reconstruction and Development that I can give is through a comparison I recently read of the bank with the Federal Housing Administration. The bank will operate in the international field of lending in almost exactly the way FHA has operated in home mortgaging in the United States.

In this way the necessary financing of reconstruction and rehabilitation of the war-torn countries of Europe and Asia can be done through private banking interests but without the risk to the private investor. The risk is assumed by the International Bank, and is mutually shared by all of its 44 members. Of course, while removing the element of risk to the investor, at the same time this plan removes the opportunity for unreasonable profit from the private bankers and financiers. This is the simple reason behind their objections to the plan.

The bank may also make direct loans through selling its securities in a member country and lending directly to either a borrowing country or private firm, or it may lend directly from its paid-in capital.

The first function, however, that of guaranteeing private loans with reasonable rates and terms of payment, is its primary purpose and the one which will be most widely utilized.

The capital of the bank will be subscribed to at agreed-upon quotas by all member countries. Of the total proposed capital of $9,100,000,000, the share assigned to the United States is $3,175,000,000. Of this amount only 10 percent is to be paid in at the outset, which means that the immediate investment of the United States would be $317,500,000,000.

As against the cost of war and economic anarchy, this figure does not represent a drop in the bucket.

The Monetary Fund set up by the Bretton Woods agreement creates machinery for the prevention of currency manipulation. Under its terms agreed to by the 44 nations, all member nations must set their currency valuation in terms of gold or the dollar, and they must abide by that valuation.

Because of the dislocations caused not only by the war but by the long period of economic chaos before the war, many countries do not have sufficient dollars or gold to pay for import goods and materials. They have not themselves been exporting and therefore do not have the moneys of the countries with whom they will now want to deal.

The fund will make it possible for them to buy or borrow on short-term notes limited amounts of foreign currencies or facilitate their foreign trade and will prevent artificial jockeying of money values. Money will not be, as it has been in the past, a commodity in itself but will be the means by which goods and materials can be purchased.

The important thing to realize is that this fund, agreed upon by 44 nations to protect themselves against artificial money manipulations, is protection against the chaotic international finances which permitted Germany and Japan to so maneuver their currencies that they could flood the world with cheap, useless gadgets while they purchased in exchange the materials of war. Of course, monetary policies alone were not responsible for the war machines of Germany and Japan, but they were a big factor in enabling these aggressor nations to prepare for war after they had made the political decision to make war.

The Bretton Woods agreement, I would like to reemphasize, is not the economic cure-all which will bring peace and prosperity to the world; nor is it the total answer to the why of war. It is an important beginning to achieving international accord in the economic field—the accord without which we cannot have peace.

The Situation at Trieste

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. DE LACY. Mr. Speaker, under leave granted to me, I desire to call the attention of the House to a letter written by Frank E. Karelsen, Jr., published in the New York Times on May 28, 1945.

It is important to note that Mr. Karelsen was the representative of the World War I Peace Conference, who, following the last war, was ordered to Fiume and the surrounding country and charged with responsibility of investigating the political and social conditions and making a report to the Peace Conference.

Through this mission he became an authority on the situation at Fiume and Trieste, which again today is disturbing that section of the world and threatening the relations among the United Nations.

Mr. Karelsen's letter takes on greater significance, coming, as it does, out of this authoritative background. To my mind, Mr. Speaker, it is even more important because of its conclusions, in which I believe most Americans must concur. This Nation must retain its role of the independent mediator in disputes among the United Nations, friendly to all but a partisan of none. It was this position which our late great President, Franklin D. Roosevelt, strove so hard to maintain. And it was this position which enabled the United States to act as a balance wheel in international affairs, to keep and preserve the unity and friendship between itself, the Soviet Union, and Great Britain, a unity and friendship even more vital today for the keeping of the peace.

The letter as published in the Times reads:

TRIESTE CONTROL ANALYZED—ACTION AFTER LAST WAR RECALLED IN CONNECTION WITH SEAPORT CITIES

To the EDITOR OF THE NEW YORK TIMES:

We have all heard a great deal about Tito's army taking control of Trieste and Fiume. However, to see his actions in the proper perspective, a few facts about some happenings at the close of the last war should be recalled.

Immediately after the armistice of World War I the writer was ordered to Fiume and the surrounding country to investigate political and social conditions and report the findings back to the Peace Conference. He was to gather evidence which would throw light on whether Fiume and Trieste should belong to Italy or Yugolsvia.

The writer was the first American officer to enter Fiume and the neighboring country, and on his arrival there he found that the Italians had taken possession of the city and were suppressing, by every means known to dictatorship, Croatian or Yugoslav activities and political groups. His investigation showed that the people of Fiume and environs four or five to one wanted that city to belong to Yugoslavia, and that, economically, beyond question both Fiume and Trieste would be more prosperous and politically free if they did not belong to Italy. All of this was reported back to the Peace Conference, and that Conference decided Fiume should belong to Yugoslavia, and that Trieste, while under Italian sovereignty, should be an open city.

Through machinations of various kinds, the Italians never left Fiume and never paid any attention to the decision of the Peace Conference in regard to either city, so that Yugoslavia, by waiting for the decision of the Peace Conference, lost what this time she does not wish to lose.

REASON FOR DISTRUST

When the writer revisited Fiume and Trieste in 1926 he found that they were literally dead cities. Trieste, which under Austria was a thriving seaport, under the Italians lost nearly all of its commerce and industry. The wharves were empty, and blocks of the city buildings and stores were deserted. Many streetcar lines were abandoned, and the population had diminished substantially. The reasons were obvious. As a seaport neither Fiume nor Trieste had any value to Italy. The tariffs and economic controls were such that Yugoslavia and Austria were deprived of the use of these cities, and, geogrpahically, Venice, Ancona, Brindisi, Genoa, etc., were far better located for Italy's needs. In fact, neither Fiume nor Trieste was of any commercial use to Italy whatsoever.

It is little wonder, therefore, that this time (especially since she has Russia's sympathy) Yugoslavia should desire to pursue an entirely different course and not trust the decisions of the Peace Conference.

It should be remembered that in the last war the Croatians and Yugoslavs helped materially in bringing about the peace by their revolt against Germany. This time Italy was on the other side of the conflict and has caused a tremendous loss of life to the Allies, while Tito and his forces have sacrificed enormously for the Allied cause. It is not surprising, therefore, if Yugoslavia should be very much aggrieved if she does not this time get possession of these cities.

These seaports are absolutely vital to the commercial life of Yugoslavia and would also be valuable to Russia, if Yugoslavia should be under the sphere of influence of Russia. For centuries Russia has desired a warm-water seaport, and for those same centuries England has maneuvered to keep this away from her or from any country under her sphere of influence.

In this, as in other matters where British and Russian interests conflict, the position of the United States should be neither pro-Russian nor pro-British, nor anti-Russian nor anti-British, but we should be guided by the justice of the claims presented and their influence on future peace.

FRANK E. KARELSEN, Jr.

NEW YORK, *May 23, 1945.*

Maritime War Bonuses Must Be Continued

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. DE LACY. Mr. Speaker, under the leave granted to me, I include a statement which I presented to the Maritime War Emergency Board on Thursday, May 31, 1945. The statement follows:

Mr. Chairman and gentlemen, I respectfully submit the following statement to supplement the statement made on my behalf and at my request by my secretary, Mr. H. Richard Seller, at the hearing held before your honorable board May 12, 1945. I fully concur in Mr. Seller's statement. However, at that time, Mr. Seller requested that I be permitted to file an additional statement in writing upon my return to Washington, and this request was granted. I appreciate the opportunity thus extended me.

As a former merchant seaman—a marine fireman in 1926 and 1927—I have a deep interest in the welfare of our merchant marine, and I know of my own personal knowledge of the advances which have been made in the past 10 years and of the real needs of the merchant seamen which have only begun to be met under the so-called war bonus during this war.

War bonuses have now become part of the seaman's take-home pay. It is not now a question of whether the risks are lesser or greater, but of how anxious America is to keep a loyal, courageous, and skilled a body of seamen as any nation ever had able to afford to continue working in the United States merchant marine.

According to the statement announced by the War Shipping Administration, the unions, and the operators, war-risk compensation was always considered as an aid in the prosecution of the war. To quote the statement's language, "In order to afford a procedure for settling questions relating to war-risk compensation and insurance * * * such questions shall be settled in such manner as shall most certainly assist in the prosecution of the war."

Now that we expect complete triumph over the last of our enemies, we are surely not indifferent to our peacetime merchant marine strength. If we turned to war bonuses to aid the prosecution of the war, there is no principled reason why, in approaching peacetime, we may not find an equivalent means to maintain whatever level of skilled employment the Nation deems advisable in its merchant marine.

As Senator BARKLEY said on the Senate floor, commemorating Maritime Day, May 21, "Today our merchant marine is manned by resolute seamen. If we allow the conditions of employment to slip back to pitiful levels, as we did following the last war, we shall perforce make the ships a haven for the shiftless and irresponsible. We cannot build a powerful merchant marine on low wages, poor food, dirty fo'c'sles and archaic employment practices.

"For the first time in the history of the American merchant marine, the earnings of American seamen have, during the course of the war, approached the standards of American industrial workers. This has enabled our seamen to marry and have homes. Today the majority of our seamen have dependents. They must be assured continued adequate compensation for their difficult and hazardous work * * *."

On May 22 my colleague the distinguished majority leader of the House, the Honorable JOHN MCCORMACK, of Massachusetts, said:

"Though faced with sharp reductions in take-home pay through readjustments in the war bonuses, a problem which must be met with the establishment of an adequate minimum wage for seamen, though faced with longer periods away from home than ever before and with Japanese savagery and ferocity, every ship will be manned and our fighting men shall not want for supplies."

The Honorable HENRY M. JACKSON, my colleague from Washington, added:

"The questions of adequate wages, working conditions, health standards, and social-security protection, the maintenance of training and upgrading facilities, the establishment of orderly methods of entrance and exit to the industry are all of as grave importance in the future of the American merchant marine as ship-sale policy.

"In 1937 the newly established United States Maritime Commission made an economic survey of the American merchant marine. Referring to the last World War, the survey said:

" 'During the war thousands of fine young Americans were brought from every section of the country to man the vessels acquired by the Shipping Board. They learned quickly, demonstrating that American seamen, given decent working conditions and proper encouragement, are the equal of any.'

"The experience of the last few years has closely paralleled previous history. Entering the war with a maritime labor force of approximately 55,000, less than 4 years later, we have over 225,000 skilled and courageous merchant seamen delivering the goods in time.

"Referring to the postwar World War I period again, the Maritime Commission's economic survey continued:

" 'Then came the era of liquidation when the Government began to withdraw from shipping. Lines were one by one discontinued or turned over to private enterprise. Wages fell and working conditions grew steadily worse until at the depth of the depression some American seamen were receiving as little as $25 a month, living under wretched conditions, eating unpalatable food, and working 12 hours or more a day. The result of such conditions was bound to be disastrous. Many of our young men left the sea, never to return. Questionable elements filtered into the ranks of our seafarers. The men grew bitter and desperate. An explosion was bound to occur.'

"That explosion did occur and the maritime industry was in constant eruption for a number of years. We want no repetition of such history. We have learned at sorrowful loss to the Nation of the imperative need for an adequate, modern, and efficient merchant fleet and for the skilled manpower to operate that fleet.

"The American seamen, through the maritime unions, have established an excellent wartime record of manning the vessels without delay, of speeding turn-around, and of solving in orderly and cooperative fashion the many difficulties confronting them. They have advanced as their goal a minimum program which I am sure has the wholehearted support of the American people. The American seaman is asking for wages and working standards which are comparable to those afforded shore-side workers who have generally fared better during the war period, having been exposed to none of the grave risks of the maritime profession, and have suffered none of the unpleasantness of separation from home and family."

It should be quite clear to the Board that the question of any action on revision downward of the war bonuses at this time would not "certainly assist in the prosecution of the war."

There is no doubt in my mind that the war bonus was intended and, in fact, has become an integral part of the take-home pay of merchant seamen. This is borne out by the fact that steamship companies and unions had negotiated and arrived at wage increases prior to the war which were called "war bonuses." They also negotiated and agreed upon coverage on dangers inherent in the global war. This was reflected in a war risk insurance coverage which later was taken over by the Government. This war-risk policy has been administered under what is known as the first and second war-risk insurance policies. Congress has dealt with this war-risk coverage on two occasions, first in Public Law 17 and second, Public Law 449.

Congress now has before it H. R. 2346, a bill which gives further coverage to war risk as such by permitting an extension of the benefits of war-risk insurance policies.

When we consider that the basic wage of skilled merchant seamen in a majority of cases is less than 40 cents an hour, there can no longer be any doubt that the so-called war bonus was a wage increase given to maintain a labor supply.

Depriving the loyal and skilled men of the merchant marine of their war bonuses now, before an adequate adjustment in their base pay can be made through the normal channels of collective bargaining, would have two deplorable results:

1. We would lose many of our merchant seamen because the pressure of simple existence for them and their families would be too great to allow them longer to remain at their jobs. This would impede the prosecution of the war and the transfer of needed men and supplies from one war theater to another.

2. We would have set the stage for the identical chaotic condition in which our merchant marine found itself following the last war.

Both these results can be offset by your Board if you do not revise the war bonus downward until a satisfactory basic wage adjustment has been approved by the War Labor Board. Even then, any downward revision should not exceed the upward revision in basic wages approved.

I am certain that your Board is also well aware that the licensed officers' agreements cannot be opened until 6 months after the war. Any decision to revise the bonus downward should, therefore, not be made until the War Labor Board has agreed to the reopening of these agreements.

Since the war risk insurance coverage was designed to protect merchant seamen against the dangers inherent in war, I respectfully recommend to the Board's consideration the revision of this coverage to meet all contingencies.

I have carefully considered this matter and feel certain that your Board, giving as I know it will your fullest attention to this vital matter, will agree that in the interest of the war effort and the future of our merchant marine, no downward revision in the war bonus should be made until and unless upward revision is similarly made in the basic wage rates of our men of the merchant marine.

If the program I have outlined is followed, it will relieve the economic hardships of the seamen, make for a bona fide war risk coverage and assure a manpower supply sufficient to man the ships for the duration of the war. In addition it will contribute in large measure to the strength of our merchant marine in the postwar era.

A Good Job Well Done

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. ANDERSON of California. Mr. Speaker, I wish to take this opportunity to call to the attention of my colleagues an outstanding job of war-bond salesmanship. The newspaper carrier boys in San Jose, Calif., who did the job are entitled to the highest praise and commendation. Following is a letter which I have just received from Thomas F. Kilmartin, field representative of the War Finance Committee of the Treasury Department, setting forth in full detail just how the highly desirable results were accomplished:

MAY 29, 1945.

SAN JOSE CARRIER BOYS SELL OVER $300,000 IN E BONDS

In a prewar bond drive, 250 San Jose Mercury Herald and Evening News carriers established an amazing record in selling nearly 10 percent of San Jose's E bond quota before the Seventh War Loan drive officially opened on May 14. Given a quota of $300,000 by the War Finance Committee, under the chairmanship of John O'Keeffe, these newspaper boys proved their ability as topnotch salesmen by exceeding their quota over $15,000.

The idea of carrier boys selling bonds was originated through their circulation director, Donald W. Farmer, who foresaw great possibilities of 250 well-trained little merchant carriers in an all-out drive to cover nearly 25,000 homes in San Jose during their monthly collection period to sell at least one E bond to each of their subscribers.

The two papers, with the cooperation of Mr. William McLaughlin, manager of the Pioneer Investors Savings and Loan Association, who also officiated as a cosponsor in the promotion of this carrier drive, laid very comprehensive plans for this city-wide coverage with grand prizes and special awards for recognition for the high bond sellers in each district.

The city was divided into 10 districts with 25 carriers comprising a district, and each district was supervised and managed by a full-time district manager. Vacation trips of 10 days' duration were awarded to the highest bond sellers in each district. This trip, with all expenses paid, to the YMCA camp in the Santa Cruz mountains, also included spending money for the boys. War bonds in the amount of $200,000 were awarded to other high carriers throughout the city.

Special recognition in the form of merit award certificates were awarded all carriers who sold five or more E bonds; and, in addition, every carrier who sold one or more E bonds was the guest of the newspapers and the savings and loan association at a special theater party.

How successful this prewar bond drive was was explained by Mr. Farmer, who claims that over 6,000 individual bonds were sold during the drive from May 1 to May 10, inclusive. Over $315,000, or nearly 10 percent of San Jose's E bond quota, was subscribed through these loyal carrier boys. This is proof of our belief in the success of this enterprise.

"E bonds were easy to sell to my customers," says William Welker, grand city champion,

who sold 161 individual bonds totaling $21,000 in cash. "All of my subscribers realize the importance of backing the mighty Seventh War Loan bond drive, so I just refused to take 'no' for an answer from any of my subscribers."

Richard Carmichael, second high carrier in the city, used the positive approach in selling nearly 150 individual bonds in the amount of $23,125. "You are going to buy an extra bond during the Seventh War Loan drive, so why not buy that bond from me, your Mercury Herald carrier boy."

Every known method of stimulating a desire to buy was employed by all carriers in selling bonds, as all boys received daily instructions in the form of pep bulletins or bond rallies by well-trained district managers. Very few, if any, boys resorted to the usual approach, "Would you like to buy a bond from me?"

Such approaches were common: "Good evening, Mr. Jones; my name is James White, your San Jose News carrier. I have something of importance to explain to you. May I step inside, please?" Gaining admittance, his message was in form of explaining the value of backing the Seventh War Loan drive to the limit by buying at least one extra bond from him.

By knowing their paper boys through monthly contacts during their collection periods, all subscribers greeted their boys with cordiality, and all were anxious to help their own carrier boy win a vacation trip or a bond prize.

To help stimulate additional interest throughout the city during this prebond drive, local banks and building and loan associations offered their facilities to our subscribers in the form of purchasing bonds at their local institutions and, upon their request, the carrier boy would receive his due credit. In addition, a daily booth in the front office of the local newspapers, with two girls in full-time employment, was offered for the benefit of the public as well.

During the campaign, many of the live and energetic carriers who were striving for leadership throughout the city operated and maintained their own hand-built display booths in the downtown areas, and thousands of dollars in bonds were sold through this medium.

As an indication of the tremendous response and interest displayed by various organizations throughout the city of San Jose, the Santa Clara Valley Shrine Luncheon Club, in one of their local luncheons, subscribed wholeheartedly to support the carrier war bond drive by all pledging to buy an additional one from their carrier.

Daily publicity and pictures were graciously given by the publisher of both papers for the purpose of helping stimulate the carrier drive, and contributed much toward the success of the boys reaching their quota.

In recognition for oversubscribing their quota, the 10 high boys in the city were asked to participate in a spearhead of the Santa Clara bond drive, which officially opened on May 20. These boys were given the opportunity to participate in this bond rally from the stage of the theater; and, through their efforts, they helped sell over $10,000 in the opening bond rally in the city of Santa Clara.

This is an indication of a great response from the general public as to their feelings toward the grand job done by a small group of boys numbering just 250. The enclosed letters were received by Mr. Donald W. Farmer, circulation director, from members of the war finance committee, the chamber of commerce, and chairman of the Seventh War Loan drive; and, in all cases, they were unsolicited, which gives further proof of the feeling and the success of this campaign in San Jose.

I wish also to include with my remarks a letter from the Treasury Department confirming the fact that the San Jose carrier boys made a significant contribution to the county's war effort. The success of this bond-selling campaign sets a pattern that might well be followed elsewhere in the country during future war loan campaigns. I am happy to join with others in congratulating the boys for a good job well done:

MAY 30, 1945.

HON. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

MY DEAR MR. ANDERSON: Your letter of May 25, addressed to Secretary Morgenthau concerning the unique San Jose (Calif.) Mercury-Herald and Evening News carrier boys' seventh war loan campaign, has been referred to me for reply.

Due to their newspaper carrier training, the circulation manager of the San Jose Mercury-Herald & News, Mr. Don W. Farmer, was certain his boys would make excellent war-bond salesmen, and, in April 1945, with the cooperation of Mr. Thomas Kilmarten, the local war finance chairman, a war-bond sales school was started for the carriers. A goal of $300,000, to be reached during their collection period which ran from the 1st to the 10th of May, was set. The carriers used the regular E bond application form, collected all payments for the bonds, and issued receipts therefor.

Every home in San Jose was contacted during this period. When the final returns were tabulated May 14, it was found that the 250 newspaper boys of the San Jose Mercury-Herald & Evening News had exceeded their goal by $15,000, making a grand total of $315,000 in E bonds sold in this 10-day effort. Mr. Farmer reports that, instead of diminishing E bond sales during the "mighty seventh," which began May 14, this prewar-loan activity increased war loan consciousness in the community of San Jose.

This is but one of the many War Savings stamp sales campaigns which the newspaper boys of this country have made a success. Their activities are not generally special spurts and large sales, but their all-together sales total is the result of consistent, small sales, the result of steady plugging, in bad weather and good, week after week. It is their constant contact with the home-delivery subscriber, their continuously unswerving loyalty, which has contributed so generously to the war-financing effort—approximately 10 percent of all the war stamps sold.

The carriers of over 900 daily newspapers in the United States started functioning as war-financing agents, even before Pearl Harbor, in the newspaper boys' War Savings stamp sales program, and as of May 30, 1945, the 150,000 newspaper boys of America have sold more than one and one-half billion, or to be exact, 1,630,325,667 10-cent War Savings stamps or their equivalent.

It is expected that before VJ-day their total sales will exceed two billion 10-cent War Savings stamps.

Sincerely yours,

TED R. GAMBLE,
National Director, War Finance Division.

The Western Steel Industry

EXTENSION OF REMARKS
OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. DE LACY. Mr. Speaker, under leave granted me, I desire to call the attention of the Members of the House to the needs of the Western States for a satisfactory Government policy in connection with the great steel facilities which have been erected in California and Utah.

We of the West are not asking any special privilege when we urge the orderly transfer of $300,000,000 worth of Government-financed steel facilities to private ownership which is dedicated to providing steel to the new industries of the West on a basis of cost of production plus a reasonable profit. Rather, we are urging that discrimination against the West, and against the growth of western industry, be halted in the interest of the entire Nation.

Hundreds of thousands of men and women have come to the Pacific coast to work in our great war industries and to make the West their home. We do not have a problem of reconversion on the Pacific coast. Ours is a problem of converting our wartime industry to a new and greater peacetime industry.

We of the West take seriously the program of full employment. We do not intend, if it is humanly possible—and we believe that it is possible—to have unemployment greet the men and women of war production who are doing such a tremendous job today in the cities and towns of the West. Yet much of the West's future—and the future of our full employment program—will be decided within the next several months as we determine the future of our Government-financed plants and facilities in both steel and light metals.

It is a privilege to include with these remarks the able statement of the steel committee of the Western States Council, a voluntary federation of chambers of commerce in the States of Washington, Oregon, California, Arizona, Nevada, Idaho, Montana, Wyoming, Utah, Colorado, and New Mexico. This first report of the steel committee, developed at a meeting of the committee in Los Angeles on May 11, details the steel situation in the West and offers some sound suggestions. The report reads:

REPORT OF THE STEEL COMMITTEE, WESTERN STATES COUNCIL

In order to make full use of the natural resources of the West and to efficiently supply the industries of the West during the war, the Federal Government has, through the Reconstruction Finance Corporation and the Defense Plant Corporation, financed the construction of steel mills at Geneva, Utah, and Fontana, Calif.

To erect the two new plants during the war, the Federal Government has spent approximately $300,000,000. This is an investment of the people of the United States made primarily to help win a war. The extent to which this investment can make a permanent contribution to the economic welfare of the Nation has become a matter of public interest and concern.

The measure of such a contribution is the extent to which the new plants at Geneva and Fontana can furnish to steel-consuming industries in their logical markets (the West) a more abundant and a lower cost supply of steel.

In order to determine whether or not these new Government-financed plants can play such a part in the civilian economy of the Nation, businessmen of the West, through the Western States Council, a voluntary federation of chambers of commerce in the

States of Washington, Oregon, California, Arizona, Nevada, Idaho, Montana, Wyoming, Utah, Colorado, and New Mexico, met in Salt Lake City, Utah, on February 12 and 13, 1945.

At a conference concerned with developing facts on the subject of western steel, these businessmen heard representatives of railroads, western industry, government, technicians, economists, and a United States Senator from the State of Maine present factual reports. It is worthy of note that neither representatives of steel-producing companies operating the Government-financed mills nor officials of the Reconstruction Finance Corporation or the Defense Plant Corporation appeared before the conference.

Reports made at this meeting were factual. Full opportunity for discussion of the facts presented was afforded and took place. The conference was truly democratic in form and spirit. Full publicity given to the conference resulted in unanimous approval in the daily papers and trade press of the character of the reports and discussions.

At the conclusion of the conference an all-western committee was appointed to study the facts presented and was instructed to meet after the development of further factual information, and adopt a program of action and place it in effect.

None of the members of this committee are officers of the Reconstruction Finance Corporation, nor the Defense Plant Corporation, nor the corporations operating the two Government-financed steel mills of prime interest in the subject of study. The committee, on the other hand, is truly representative of western industry and commerce.

The committee developed further facts through staff employees, standard sources of facts on the steel industry, consulting engineers, business records of its own members, figures of the United States Department of Commerce, research departments of steel-producing companies, trade papers, and personal consultation with acknowledged experts on the subject under examination. The committee also consulted with local auxiliary committees in San Francisco and Los Angeles, Calif., representing jointly, 80 of the leading steel-consuming industrial plants of the West.

The steel committee of the Western States council met at the call of its chairman in Los Angeles on May 11, 1945. Based upon the facts developed from the best sources available to it, the committee adopted the following program and plan of action. The committee further ordered that its chairman and secretary present this program to Congressmen and Senators, from the 11 Western States, the governors of these States, Federal Government agencies of direct interest, newspapers, and the trade press, the steel industry of the Nation, and the committee further pledged itself to work for the adoption of this program.

FINDINGS AND RECOMMENDATIONS

1. During the war, manufacturing operations have expanded tremendously throughout the West. The population of the West, particularly in California, Oregon, and Washington, has been greatly increased since 1940. The percentage of workers engaged in manufacturing operations has likewise increased. A large portion of the newcomers are employed in the shipbuilding and aircraft industries, neither of which is expected to maintain present high levels of employment in the postwar period. Employment must be found for these workers, and this will require a substantial increase in the manufacture of peacetime goods, particularly in the field of metal products. Both the plants and the workers are here and they must be used in the manufacture of products never before made in the West as well as through the enlargement of markets for the products formerly made here.

To accomplish this objective, the greatest single contributing factor will be the elimination of the premium paid by western steel buyers during the prewar period over prices paid in other industrial centers of the Nation.

2. The Geneva and Fontana plants together with the plants operating in the 11 Western States in the prewar period and wartime additions to those plants have a combined annual production capacity of 4,613,160 tons. From this figure should be deducted 801,120 tons of railroad products sold by Colorado Fuel & Iron Co., of Pueblo, Colo., to railroads of the West and Midwest, leaving a total of 3,812,040 tons of steel for industrial, commercial, and construction purposes. Estimates of postwar steel consumption in the 7 Western States published by the United States Senate Committee on Postwar Economic Policy and Planning indicate a total of 3,675,000 tons annually. Adding to this the prewar annual exports of steel to countries in the Pacific area, Alaska, and Hawaii, averaging 1,010,125 tons, we reach an authoritative estimate of 4,685,125 tons annual steel consumption based entirely on prewar market demand. A more competitive price on steel than existed prewar will permit the manufacture of products not previously made in the West.

Considering the prewar demand, plus the potential increase which would result from a lower price on steel, the committee is confident that the plants at Geneva and Fontana can operate at a level of production as high, or higher, than the average for the steel industry as a whole.

3. The new war-built steel-producing plants at Geneva, Utah, and Fontana, Calif., should be operated under private ownership. The transfer of title of the Geneva mill or final determination of settlement of Kaiser's obligation to the RFC should be made as soon as possible in order that both properties may be kept in continuous operation.

Because a considerable investment must be made in each plant for alterations and additions before the plants can properly serve the western market, we believe that the plants should not be leased. These investments certainly would not be made by a lessee of property owned by the Government and should not be made by the Government for the benefit of a lessee.

The sale contract of the Government-owned mill at Geneva and the adjustment of the loan at Fontana should include statements of the price policy to be put in effect by the mill owners. That price policy should be based upon production costs plus a reasonable profit and should not include "phantom freight" arbitraries, or other factors not related to actual costs.

4. Both the Geneva and Fontana mills were constructed during wartime when costs were much higher than normal. Furthermore, these plants were built primarily for the production of plates and structural shapes for the shipbuilding industry. Substantial alterations and additions will be necessary before either mill can produce the diversified products necessary to properly serve the western market.

While the Geneva plant is owned by a Federal Government subsidiary and the Fontana plant is encumbered by a mortgage of another Federal Government subsidiary, the capital investment has been made by the people of the United States in both instances. If the Federal Government should attempt to realize its full investment in the Geneva plant and insist upon full payment of the mortgage on the Fontana plant, these mills would undoubtedly remain idle because the capital investment per ton of rated capacity would not permit operation in a competitive market.

We believe that a fair value for the sale of Geneva can be established by the following method:

(a) Estimate the fair value of the plant after necessary alterations and additions will have been made to equip it for the manufacture of the diversified products necessary to properly serve the western market.

(b) Deduct the cost of such alterations and additions.

(c) The remainder would represent the maximum amount which the Government should expect to realize from the sale of the plant.

Even after arriving at a sale price by the method suggested, further consideration must be given to the invested capital per ton of rated capacity which would then exist as compared to the average of the steel industry.

The adjustment of the loan made to construct the Fontana plant should bear such a relation to the disposal price of the Geneva plant that neither plant will have an advantage over the other from the standpoint of capital cost to the private owner.

5. In general the price for different types of steel in Pacific coast markets has reflected the basing point prices in the eastern steel production centers plus an amount which was approximately equal to the all-water transportation costs from Atlantic or Gulf ports. This Pacific coast price has in general been from $10 to $15 more per ton than in the eastern steel production centers. In the past these prices have been paid by western buyers of steel for steel produced in and delivered by eastern mills and also for steel produced in western plants. As a consequence, western manufacturers and fabricators have paid prices for steel that limited their ability to market products made from steel to definitely restricted market areas. We are convinced that even though the Federal Government were to place the new western steel mills in the hands of private owners at a capital cost comparable to eastern steel mills, a continuation of the present steel-pricing formula by steel-producing companies would deprive the industries and consuming public of the West of the advantages they should receive in the transfer of these properties, publicly financed, to private ownership. In placing these properties in the hands of private owners, the Federal Government should properly evaluate the effect of the recent Supreme Court decision in the case of the *Corn Products Refining Co.* v. *Federal Trade Commission* relating to basing point price systems which attorneys advised this committee, has direct bearing on the prewar and present pricing system applied in the sale of steel to western buyers.

We wish to point out also that under present OPA price regulations the Pacific coast pays the highest prices in the Nation for basic steel products and that the OPA's price ceilings include the described steel-pricing formulas. We recommend that the steel-producing companies establish at the earliest possible date western prices on steel based upon cost of production at, and transportation from, western mills, plus a reasonable profit instead of basing the western price on eastern prices plus real or arbitrary charges.

6. This committee recognizes that delivered prices for steel must include transportation costs. Even though competitive capital and operating costs are established in the war-built western steel mills, transportation rates could prevent their successful operation. A basing-point price at the Geneva mill equivalent to that in effect at Sparrows Point, Md., would not result in lower delivered costs to Pacific Coast users because the freight rate from Geneva to the Pacific coast ($12 per ton) is almost identical to the rate for water transportation from Sparrows Point in effect prewar.

For the Geneva mill to operate in the postwar period, the freight rates on finished steel from the mill to western markets must be substantially reduced, and this must be done in advance of the disposition of the mill.

7. Studies of this committee as to the possible production costs at Geneva and Fontana lead to the conclusion that our objective of lower western steel prices with the attendant

beneficial effect upon the industrial growth of the West can and must be attained.

CONCLUSION

We seek new markets for the products of the West in order to employ the workers who have come here to live, and in order to furnish opportunity for returning servicemen. We do not seek special privilege or competitive advantages to which we are not entitled.

We believe that a pattern for the disposition of Government-owned plants throughout the Nation can be established by the settlement of the western steel situation where the approach to the subject is made on the basis of a united desire to serve the entire economy of a region.

We believe that the element of time is important; we are ready to make definite postwar plans and material requirement commitments; bidders for the Geneva steel mill have signified their interest in purchasing or leasing the property; owners of the Fontana mill have publicly stated their desire to stay in the steel business; some of the western railroads have made public statements regarding rail rates; the question of basing-point prices is before the courts and the Federal Trade Commission; war requirements for a sizable portion of the Geneva and Fontana mills are definitely declining; expansion or alteration plans of other western steel mills are being held in abeyance.

These matters can all be resolved around the common objective of the orderly transfer of $300,000,000 worth of Government-financed property to private ownership as the basis for a permanent western industry serving all of the people of the West on a truly competitive basis.

The foregoing report and program of action was adopted Friday, May 11, 1945, by the Steel Committee of the Western States Council whose membership is composed of the following: Kenneth T. Norris, chairman, president, Norris Stamping and Manufacturing Co., Los Angeles, Calif.; R. N. Allen, Star Iron & Steel Co., Tacoma, Wash.; Gus P. Backman, secretary, Salt Lake City Chamber of Commerce, Salt Lake City, Utah; Clark D. Carpenter, professor of metallurgy, Colorado School of Mines, Golden, Colo.; F. T. Letchfield, consulting engineer and assistant vice president, Wells-Fargo Bank & Union Trust Co., San Francisco, Calif.; Charles E. Moore, president, Joshua Hendy Co., San Francisco, Calif.; A. T. Peterson, president, Montanans, Inc., Helena, Mont.; Alden Roach, president, Consolidated Steel Corporation, Ltd., Los Angeles, Calif.; William M. Schmitt, president, Schmitt Steel Co.; Portland, Oreg.; John R. Simplot, president, Simplot Dehydrating Co., Caldwell, Idaho; E. L. Soule, president, Soule Steel Co., San Francisco, Calif.; Milo B. Spaich, general manager, American Forge Co., Berkeley, Calif.; Clyde Summerville, Seattle Steel Co., Inc., Seattle, Wash.; Charles Voight, president, Stearns-Roger Manufacturing Co., Denver, Colo.; John M. Wallace, president, Walker Bank & Trust Co., Salt Lake City, Utah; James F. Bone, secretary-manager, Industrial department, Los Angeles Chamber of Commerce, Los Angeles, Calif.; Morris B. Pendleton, president, Plomb Tool Co., Los Angeles, Calif.

American Slav Congress

EXTENSION OF REMARKS

OF

HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a speech by the Honorable Edward E. Kelly, mayor of the city of Chicago, at the Midwest Conference of the American Slav Congress on the occasion of the third annual conference held in Chicago, April 29, 1945. Mayor Kelly's speech follows:

I am happy and proud to be here because it brings back many fine memories. These are solemn days. We still have heavy sorrow in our hearts at the loss of the greatest man of our century.

We know of and appreciate the work of the American Slav Congress, which did such a great job in supporting the President and also myself as mayor. You and I think alike—we are thinking of our fellow men. We want to see a happy, prosperous world for everyone and all men living as brothers. Your meeting on this occasion is of great importance to these goals; you are asking for the unity and cooperation of the great countries of the world, of all the peace-loving nations, which is the only way we can possibly stop all wars forever and make a lasting peace.

We might at this time reminisce a little because you and I took a little punishment during the last few years for believing that the rest of the world concerned us, and what happened in any country might affect all of us. We were called warmongers by the isolationists—our great President Roosevelt was pilloried from Maine to California because he knew that this was our war. You remember what a narrow escape the Selective Service Act had, being renewed by one vote. We will never forget the dedication of the Outer Drive Bridge in 1937, when I was chairman and the President called for quarantining the aggressor nations. If it had not been for the foresight of the great President of the United States, the Nazis would have easily walked into England and into Russia.

Our President was the greatest man our country ever produced—democratic, strong and mighty—Franklin Delano Roosevelt. He was a man who loved humanity; who worked to protect labor, children, and all mankind.

This country has a great opportunity in assuring the success of the San Francisco Conference which will establish the unity of all nations, and a lasting peace on the principles that Roosevelt worked and died for. Roosevelt died on the battlefield, figuratively speaking, for our victory and an organization to maintain the peace.

You and I realize that those were not lies when we heard of the brutality of the Germans. I couldn't believe it, but I do believe it now. These acts of brutality are coming out of a country which was supposed to be civilized and which produced men who were looked up to by the rest of the world for their mental achievements. I just received a letter from my nephew, a chaplain in the Third Army fighting in Germany, in which he says that he saw with his own eyes a pit in which 3,800 people were tied together and stacked like wheat and burned to death. Those Germans are the people we are wiping off the earth. Those are the people who should be wiped off the earth.

Countries have been brought closer together, due to air transportation. When this war is over, we can fly to Great Britain in 11 hours—that is just the length of time it takes to fly across our country. We know we can't be fighting with each other—we must have unity of nations.

I have the greatest faith in President Truman who has already declared that he will follow in the footsteps of the great President Roosevelt. I am proud to be the one who nominated him for Vice President at the last convention here in Chicago at the Stadium, for I knew at that time what kind of a man he was.

I don't think we should celebrate the European victory while our boys are dying in the Pacific. Let's wait for complete victory and have a real celebration. I hope and pray that the war will be over soon and our boys will be back here, seated at our tables.

Years back in 1940, President Roosevelt told me that he could not run again, because he was a detail man and keeping up with the many details of his work would kill him. He did not want the third term. I spent an evening with him and I told him that, with all due respect, so what? Many lives were at stake—our boys' lives—and if things went wrong because he was not President, he would never forgive himself. The very next day, President Roosevelt announced that he was running for the third term. He went in with his eyes wide open, knowing that he might lose his life.

Roosevelt always considered that you were his friends and thought as he did. He always asked me about the Slav Congress and what your organizations were doing whenever I saw him. You know, unofficially he was a sponsor of the American Slav Congress. He knew that he could count on your support and backing. He always held the American Slav Congress as an example of unity and the cooperation he wanted and needed from the American people.

The important thing for your organization to do is to continue to preach the gospel of unity, preach the gospel of decency, preach the gospel of Roosevelt—and when you preach that gospel, you will be preaching the gospel of God.

Address of Hon. Luis Muñoz-Marín, President of the Senate of Puerto Rico

EXTENSION OF REMARKS

OF

HON. JESÚS T. PINERO

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. PIÑERO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include in the Appendix of the RECORD, a speech made over the Columbia Broadcasting network by the Honorable Luis Muñoz-Marín, President of the Senate of Puerto Rico on Saturday, May 26, 1945.

Senator Muñoz-Marín came to Washington as head of a joint commission of the insular legislature to testify before the Senate Insular Affairs Committee on a bill introduced by Senator MILLARD E. TYDINGS, which would give Puerto Rico outright independence.

The Commission, in a statement to the committee printed in the RECORD of Monday, May 14, 1945, opposed the bill as presented, and acting on a mandate of the insular legislature proposed a bill defining various types of permanent political status which might be possible for Puerto Rico and which would permit the Puerto Rican people to choose one of them, on the basis of a plebiscite.

The new bills, S. 1002 and H. R. 3237, are discussed by Senator Muñoz-Marín in this speech:

The future peace of the world depends to an important degree on the solution or solutions that may be found to the colonial problem. It also depends, to a still greater degree, on the prestige of the United States among the peoples of the world—on the confidence that the common man everywhere

shall continue to have in the human understanding and the democratic sincerity of the American people.

It is of the utmost importance to democracy that the United States shall not cease to be the champion of democratic rights in the minds of men and women everywhere. It is clear that our great ally Russia is making a bid for that confidence and that trust which have been the traditional heritage of the United States. Of course, Russia's attitude in this respect should not be unwelcome. There is no such thing as too much good will, as too much recognition of rights and liberties. The world certainly needs as much of that as it can get from all possible sources. But certainly Russia's attitude should not be allowed to displace and substitute the traditional American attitude, but only to complement it and support it. Russia's developing international liberalism would appear best in its proper place, that is, as a follower of the tradition that the United States has made its own these many years.

In the treatment of colonies and of otherwise dependent peoples, the United States has an eminent field for sustaining, strengthening, and developing its policy for a good, for a confidence inspiring, for a lasting peace under the principles that have reared the national greatness of the American people.

I am proud to say that in this respect my own country, Puerto Rico, which has contributed without stint to the war effort, is now making what is perhaps a still more important contribution to the peace effort. Puerto Rico is a Caribbean island-country of 2,000,000 people which came under the jurisdiction of the United States as a result of the Spanish-American War almost half a century ago. Puerto Rico is a colony of the United States. It is a colony, it is true, that has been administered in a mild, though not always intelligible way, by the United States Government. But it is a colony. It is what each of the original Thirteen States were before 1776; basically its government does not derive its powers from the consent of the governed. That is, by the time-honored definition written by Jefferson, what colonialism means to the American mind; and by that definition, Puerto Rico is a colony of the United States. Puerto Rico is also a very poor country in its economic geography. It has but 3,500 square miles of territory. Half of its land is not arable, much of the rest is not of very good quality; there is not much mineral wealth under that land, and 2,000,000 people, that is 560 persons per square mile, must make their living from the top of that land. In order for so many people to subsist on such a scarcity of resources the bulk of production must be of intensive cash-crops that can be sold in extensive markets at reasonably good prices.

It is this same people of Puerto Rico, to whom Nature has been so harsh, who have reached their political maturity, according to a message of the late President Roosevelt to the Congress. They have given proof of this maturity. Eighty-five percent of the registered voters vote on the basis of universal adult suffrage. Although political passions frequently run high, elections are absolutely peaceful and orderly. Defeated candidates recognize their defeat and the fairness of the electoral process. The buying of votes has been unheard of for quite some time. The people vote on the clear understanding that they are giving a mandate for certain laws to be enacted and certain policies to be carried out insofar as their elected legislators have the legal authority to do so, and they are vigilant as to whether their clear-cut democratic mandates are carried out or not. The Puerto Rican people, in fact, are more than just a politically mature people. I sincerely and proudly believe that in their hinterland of the world they constitute the best rural school of democracy in America today, and that there is profit in looking to its poverty-stricken electorate as an example of sound democratic practice.

It is these people, so politically sound and so economically harassed, that are now contributing to the peace effort, as they are contributing to the war effort. They are now proposing to the Congress and the Government of the United States a plan for self-determination. This plan may well serve as a basis for dealing with the colonial problem in many other parts of the world as well as in Puerto Rico. It should also help the United States in clarifying, maintaining, strengthening, and developing that leadership of hard-pressed mankind everywhere which is of such decisive importance to world justice and world peace.

The Legislature of Puerto Rico has unanimously proposed to the Congress of the United States a clear-cut straight-forward method of solving the colonial problem, on the basis of self-determination, in democratic terms, and in the fiber of American policy and tradition. The Puerto Rican proposal is as follows: At the request, the unanimous request, of the Legislature of Puerto Rico, all political parties concurring, a bill has been introduced in the Senate by United States Senator MILLARD E. TYDINGS, of Maryland, and in the United States House of Representatives by Resident Commissioner PIÑERO, of Puerto Rico. This bill contains four titles and offers three alternative forms of government to the people of Puerto Rico. Title 1 provides that there shall be a referendum in which the people of Puerto Rico shall decide whether they want independence under certain economic conditions necessary for their survival, or statehood, or dominion status similar to that of Australia or Canada in the British Commonwealth of Nations. Title 2 describes independence. Title 3 describes statehood. Title 4 describes dominion status. If a majority of the people of Puerto Rico vote for independence, then title 2 shall go into effect. If they vote for statehood, then title 3 shall go into effect. If they vote for dominion status, then title 4 shall go into effect. In this manner, if the bill is approved, the people of Puerto Rico themselves will choose their own future, on the basis of an offer by the American Congress, and in choosing it they will have before them the fullest possible picture of what they are voting about.

It is worthy of note that the proposal provides that the United States shall have in perpetuity all the military and naval bases and rights that they may need in Puerto Rico for the defense of the United States and the Western Hemisphere. This is of very great importance, as Puerto Rico constitutes one of the chief military protections of the Panama Canal, and has been called by military authorities "the Gibraltar of the Caribbean." Parallel with these perpetual rights of the United States, under any form of government that the people of Puerto Rico may choose, certain minimum economic conditions are established, also under any form of government that the people of Puerto Rico may choose. These minimum economic conditions are considered necessary if the people are to survive in the face of the difficult economic circumstances that confront them. I should call attention to the fact that these minimum economic conditions do not represent any increase in economic facilities. Therefore the granting of them would not in any way increase the commitments of the United States, but would rather decrease them. What is, therefore, proposed is to wipe out political discontent without intolerably increasing economic suffering and discontent. This is of importance not only as a matter of justice and of American leadership in democracy but also as a means of surrounding important military defenses with the greatest possible democratic good will.

Let us look at what the colonial problem means in broad terms. Obviously, the United States will have need of military and naval establishments in many parts of the world. But just as obviously these establishments are a second line of defense. The need for military establishments is predicated upon the sensible provision that all good-will means of keeping the peace may fail. The first line of defense is the maintenance of peace, the creation of conditions that, so far as human understanding and good sense can make it so, will tend to keep the world at peace with itself. For that reason, the need for military establishments—the second line of defense—should not contradict the need for democratic procedure in the maintenance of world confidence in American leadership. Neither, of course, should the need to maintain this leadership weaken in any way America's maximum ability to defend itself if peace should fail. The Puerto Rican proposal is made in the clear recognition of these two paramount factors.

Military and naval establishments may be needed in two broadly different kinds of places. They may be needed in small places scantily populated, and they may be needed, as they are in Puerto Rico for instance, among large populations with a developed civilization, with a recognized political maturity, and an acute consciousness that the principles of freedom are applicable to them also. The United States is making this distinction clear at the San Francisco Conference. Military and naval bases and establishments, of course, must be where strategy says they must be, whether on small rocks of the sea where the problems of the population are at a minimum or in developed communities where the problems of the people are of great significance and importance with relation to the general democratic principles and policies at stake.

In offering its proposal for self-determination, Puerto Rico is bearing in mind these considerations. The United States, at San Francisco, are standing for self-government to colonies, which may include independence. The Puerto Rican proposal is a specific proposal for self-government on the basis of an alternative offer by Congress of different forms of self-government, which may include independence, and an acceptance by the people of Puerto Rico, in referendum, of one of the forms of self-government offered by Congress.

The proposal that the Legislature of Puerto Rico has unanimously presented to the Congress of the United States is a self-determination proposal as embodied in Senate bill 1002 and in House bill 3237. We make this proposal both as a claim of justice for Puerto Rico and as a contribution to American leadership—a leadership so completely necessary for the prevention of future wars—in the minds and hearts of average men and women the world over. For both reasons we hope to receive for our proposal the support of the American people.

The Late Hon. Jonathan Mayhew Wainwright

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two newspaper articles from the New York Times and the New York Herald Tribune, re-

spectively, of June 4, on the life of Col. J. Mayhew Wainwright:

[From the New York Times]

J. M. WAINWRIGHT DIES IN RYE AT 80—FORMER ASSISTANT SECRETARY OF WAR, EX-REPRESENTATIVE, WAS A COUSIN OF THE GENERAL

RYE, N. Y., June 3.—Col. Jonathan Mayhew Wainwright, Assistant Secretary of War in the administration of President Harding and formerly for more than 8 years a Member of the House of Representatives, died here this afternoon at his home on Stuyvesant Avenue, in the Milton Point section, after a long illness. His age was 80. He was a member of the law firm of Barry, Wainwright, Thacher & Symmers, of 72 Wall Street, New York.

A first cousin of Lt. Gen. Jonathan Wainwright, who has been a prisoner of the Japanese since he was captured in the Philippines early in the war, Colonel Wainwright achieved prominence as a soldier in three wars, lawyer, and financier. A Republican, he served as Representative from the Twenty-fifth New York District, which embraces northern Westchester and Rockland County, until 1931.

ADVOCATE OF PREPAREDNESS

Colonel Wainwright preached the doctrine of preparedness long before this country became involved in the European War. In 1940, with a group of military and political leaders, including Secretary of War Henry L. Stimson, he urged the immediate adoption of compulsory military training with universal service for both men and women in time of war.

A year later, at the one hundred and fifty-eighth annual convention of the Episcopal Diocese, he endorsed the stand taken by the Right Reverend William T. Manning, Bishop of New York, asking the Federal Government to take a full and open part in the conflict.

In January 1941, Colonel Wainwright became chairman of the Westchester County Defense Council, serving until April of that year. During the time he held the chairmanship and on many occasions after he resigned because of ill health, he warned the residents of the county to shake off their complacency and realize that they were close to war.

EXPONENT OF DRY LAW

Colonel Wainwright's political career came to an end, it was believed, because he had long been known in Congress as a militant prohibitionist. When the temper of his constituents changed, William L. Ward, Westchester Republican leader, offered him a renomination, but Mr. Wainwright declared that after 30 years of public service he felt he should retire.

Born in New York on December 10, 1864, Colonel Wainwright was the son of John Howland and Margaret Livingston Stuyvesant Wainwright. He attended Columbia University, receiving bachelor of arts and bachelor of philosophy degrees there in 1884 and a bachelor of laws degree from the Columbia Law School in 1886. In 1908 the university conferred on him an honorary master of arts degree.

Admitted to the bar in 1886, he practiced law in New York and made his home for many years in Rye, where his residence was regarded as a show place. He was also interested in Westchester financial affairs and had served as a director of the Rye National Bank, the Westchester Trust Co., the Mutual Trust Co. of Westchester, and the Westchester Title and Trust Co.

BEGAN POLITICAL CAREER IN 1902

In 1902 Colonel Wainwright made his political debut and was elected an assemblyman. In the assembly he gained a reputation of being a hard worker and of being an independent and a progressive, although in later years in Congress he was known as a regular Republican.

He served in the assembly until 1909, when he became a State senator. In the senate he opposed direct nominations, took a prominent part in the developments following the Allds bribery investigation, and was prominent in the demand for a general graft probe.

He came from a family of old Colonial and Dutch stock, one of his ancestors, Jonathan Mayhew, having been a Boston minister of Revolutionary fame, and another having been Peter Stuyvesant. He served for years in the National Guard, beginning in 1889 and ending in 1906, and being promoted through the grades to lieutenant colonel.

On the call for volunteers at the outbreak of the Spanish-American War in 1898 he entered the service, becoming a captain in the Twelfth New York Volunteers.

SERVED ON MEXICAN BORDER

In the Mexican border trouble of 1916 Colonel Wainwright served as lieutenant colonel, Inspector General's Department, and in 1917 became lieutenant colonel and division inspector of the New York division of the Guard. In July 1917 he was mustered into the Federal service and occupied the same post with the Twenty-seventh Division. He then served in France, participating in all the battles and engagements of the division.

He won the American Distinguished Service Medal, the decoration of Officer of the French Legion of Honor, and the Belgian War Cross with Palm and Silver Star.

In 1919 he launched an attack on "inhuman treatment" of American soldiers in Parisian jails, blaming "the American commanding officer in Paris." He charged cruel and brutal punishment for petty offenses and forwarded his charges to Congress.

In 1921 President Harding appointed Colonel Wainwright Assistant Secretary of War, which post he held until 1923. He was particularly interested in the development of aviation, in improving the conditions of military life, and in laying the groundwork for preparedness for war so that an army of 4,000,000 men might be called into action in a short space of time.

When Mr. Ward, Republican chairman of Westchester County, died in July 1933, Colonel Wainwright was one of a triumvirate which ruled the party in the county until April 1934, when Charles H. Griffiths, New York attorney, was elected to Mr. Ward's place.

He also was at one time chairman of the committee on diocesan finances of the Protestant Episcopal Diocese of New York and served on the standing committee of that diocese.

Colonel Wainwright was a trustee of St. Luke's Hospital, this city, and a member of the American, State, and New York City Bar Associations, as well as of Delta Psi Fraternity. His clubs were the Union, University, and Republican of New York, the Metropolitan and Army and Navy of Washington, and the Apawamis and American Yacht, the Downtown Association, the St. Nicholas Society, the Colonial Lords of the Manor, and the Sons of the Revolution.

He leaves a widow, Mrs. Laura Buchanan Wainwright, whom he married in 1892, and a daughter, Mrs. Philip K. Condict, of Rye and South Stratford, Vt.

A funeral service will be held on Wednesday at 4 p. m. in Christ Episcopal Church, Rye. Burial will be in the family plot in Greenwood Union Cemetery, Rye.

[From the New York Herald Tribune]

COL. J. M. WAINWRIGHT, 80, DIES; STATESMAN, SOLDIER, AND LAWYER—ASSISTANT WAR SECRETARY IN '21 FOUGHT IN 3 CONFLICTS; SERVED 8 YEARS IN HOUSE

RYE, N. Y., June 3.—Col. J. Mayhew Wainwright, 80, former Assistant Secretary of War, and a leader in the Republican Party in Westchester County for more than 4 decades, died today at his home on Stuyvesant Road, in the Milton section of Rye, after a long illness.

Colonel Wainwright, a cousin of Lt. Gen. Jonathan M. Wainwright, last commander on Corregidor, now a prisoner of the Japanese, made a name for himself in three careers—in law, in the Army, and in politics. Born in New York, the son of John Howard Wainwright and Mrs. Margaret Livingston Stuyvesant Wainwright, his ancestors were among the earliest Americans.

Through his mother he was a descendant in the seventh generation of Peter Stuyvesant, the last Dutch Governor of New Amsterdam—now New York. On his father's side he was a grandson of the late Bishop Wainwright, of the Protestant-Episcopal diocese of New York, for whom he was named.

LAWYER SINCE 1886

He studied in this country and in France and Germany, then returned to the United States and was graduated from Columbia College and the School of Political Science in 1884. Two years later he received his law degree from the law school of Columbia University and started a legal career which took him into practice in Rye and in New York, where he served in the district attorney's office, then with the firm of Strong & Cadwalader.

Except for interruptions occasioned by military service in three wars and terms in public office, he remained in active law practice until the time of his death, when he was a member of the law firm of Barry, Wainwright, Thacher & Symmers, of 72 Wall Street, New York.

He turned early in life to military affairs. In 1889 he was commissioned a second lieutenant in the Twelfth Infantry Regiment and served as its regimental adjutant. He was a captain in the Spanish-American War with the New York Volunteers and, after the war, was commisisoned a lieutenant colonel in the National Guard.

Colonel Wainwright was with the punitive expedition to Mexico in 1916 with that rank. He was divisional inspector in 1917 when the United States entered the First World War and the National Guard was mustered into the United States Army.

WON FOUR MEDALS IN FRANCE

Serving with the Twenty-seventh Division in all its engagements in France, he won the Distinguished Service Medal, the Legion of Honor, the Belgian Croix de Guerre, and the Silver Star Medal for gallantry under fire.

Discharged in 1919, he returned to the legal and political careers which the hostilities interrupted. He had first been a candidate for office in 1896, when he was defeated for the legislature. A successful candidate for the same post in 1902, he served a 2-year term. In 1909 he was elected to the State senate, and was one of its most active Republican members for 4 years. It was on his report as chairman of the State commission that the State workmen's compensation act, the first of its kind in the country, was enacted. He served a second term, then retired temporarily to the law and the Army.

President Harding called him into his official family in 1921 as Assistant Secretary of War, in which post he remained 2 years. For a time, during the illness of Secretary of War John W. Weeks, he was Acting Secretary of War. He battled consistently for an organized reserve of the Army which would facilitate quick mobilization of 4,000,000 fighting men, and toured the Nation as an advocate of preparedness.

IN CONGRESS FOUR TERMS

In 1922 the Republican organization of Westchester County named Colonel Wainwright as its candidate for United States Representative from the Twenty-fifth District. He won, resigned his War Department

duties, and was a Member of the House of Representatives for four 2-year terms. He was in the forefront of the fight for a separate Army Air Corps and was successful in his espousal of a $75,000,000 bill to finance it.

Despite his activity in national affairs, he paid keen attention to civic affairs in Westchester. He was a director of four banks and, after his retirement from Congress, a member of the Westchester County Park Commission.

In 1892 he married Miss Laura Wallace Buchanan, of Baltimore. A daughter, Mrs. Phillip Condict, of Rye and South Stratford, Vt., also survives. A funeral service was held at 4 p. m. Wednesday in Christ's Church Episcopal, Milton Road, Rye, with the Rev. Wendell Phillips, the rector, officiating.

A Tribute to Our Departed President

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

A TRIBUTE TO OUR DEPARTED PRESIDENT

(By Rev. H. C. Hathcoat, in Oklahoma House of Representatives)

Truly a "prince in Israel" has fallen in the Nation's greatest battle for liberty and democracy. Human language groans in its feeble attempt to express the grief sustained by 130,000,000 Americans, while freedom-loving nations, from zone to zone and from pole to pole, pause to pay him tribute, and flags hang at half mast from the rivers unto the ends of the earth. Lincoln belongs to the ages, but Roosevelt belongs to the universe.

He was the symbol of undaunted courage, the expression of unwavering faith, the example of unselfish liberty, and the champion of unprejudiced tolerance. His magnanimous spirit lifted him above personal retaliation, while his love for his country and his devotion to duty exalted him above partisan prejudices. The gravity of the problems of state, coupled with the burdens of the great war, have taken their toll of the stamina and health of our beloved leader for the past few years, especially, and have robbed him of the happiness of eating the fruits of his labors ripened into full fruition. However, he has tasted of their yieldings, and, like another illustrious leader, he ascended his Mount Pisgah to envision the Promised Land of peace and security, to which he had led the Nation, and for which he gave his all.

Truly he "served his generation by the will of God, fell asleep, and was gathered unto his fathers."

Historians will record his achievements, poets will sing his glory, scribes will write of his greatness, statesmen will quote from his discourses, and true Americans will emulate his example. The Nation will, in due time, erect a monument of granite or marble as a token of his undying spirit. Yet in a fuller sense over 130,000,000 Americans will enshrine the memory of him in the fleshly table of their hearts. This appreciation of him will be handed down to posterity, and generations unborn will rise up and call him blessed. Like the Master Teacher, it can be said of him, "the common people heard him gladly."

God buries His workers but carries on His work. Let us all join in our prayers that the mantle of our departed leader may fall on our new President. And may a double portion of the spirit of foresight and courage be given him as he pilots the ship of state through the troublesome days that lie ahead. Our earth-dimmed vision may, at times, be prone to question the providence of Him who guides the destinies of men and nations, yet we should remember the Scriptural injunction, "The Judge of all the earth will do right." Let us all, in this sad hour, find comfort in the words of the poet William Cooper, who wrote:

"God moves in mysterious ways
His wonders to perform,
He plants His footsteps on the sea,
And rides upon the storm.

"Deep in unfathomable mines
Of never failing skill,
He treasures up His bright design
And works His sovereign will.

"Judge not the Lord by feeble sense,
But trust Him for His grace,
Behind a frowning providence
He hides a smiling face."

Medical Corps Ambulance Drivers Real Humanitarians

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, there are several classes of servicemen who are not much discussed and concerning whom the public knows little. During the European hostilities, the ambulance drivers of the Medical Corps were chiefly young men of tender years. Frequently they were our 19- and 20-year-old boys. Usually, they were not armed or protected, but while on duty were almost constantly within the range of the guns of the enemy. They were habitually called upon to render the most humanitarian service to their wounded buddies. The dispatch with which they performed their duties frequently meant the saving of the life or lives of their human cargoes. They witnessed horrible and gruesome sights of suffering and dying humanity. The compassion of their souls was poured out and yet they must use precision, accuracy, and cool-headedness in the performance of their delicate and responsible tasks. The ambulance drivers of the Medical Corps were real humanitarians.

Mr. Speaker, the youngest of my four sons in the service is one of these boys. He was 20 years old when he entered the European theater of operations. The first ambulance he drove was not taken out of service until, as he expressed it, the enemy had put more than 60 air holes through it. This illustrates the hazards and dangers to which these young boys have been subjected.

Now that the hostilities in Europe have ceased, these boys have begun to reminisce, and I am today in receipt of a poem written by an ambulance driver in France which describes somewhat vividly the importance of the humanitarian service these ambulance drivers of the Medical Corps have rendered. The poem follows:

AMBULANCE DRIVER'S BALLAD

(By an ambulance driver in France)

There's the Joe who pleads for water
Mile after pleading mile,
With his guts shot out by shrapnel;
All you give him is a smile.

Then the guy right down below him
With an amputated leg,
Says his feet are numb and cold,
It's hell the way he begs.

The guy behind my buddy
Begs to have a smoke;
My buddy holds it for him,
All his arms and legs are broke.

Down below, the other Joe,
Is calling for his dad;
You drive a little faster,
That kid is bleeding bad.

Yes; it seems to be a thankless job,
Devoid of thrills and praise;
But it pays in dividends
A dozen different ways.

It's swell to walk into a ward,
And have a guy say, "Hello,"
That single word is praise enough,
You've saved another Joe.

For there's a boy you counted gone,
A bullet in his head;
You know your driving got him through,
He's sitting up in bed.

Let 'em save the decorations,
Our job is saving lives,
We want the praise that really counts,
From thoughtful moms and wives.

For those lives are dedicated to,
Those guys who drove in France,
Who saved sons for wives and mothers,
In a GI ambulance.

Marvin Jones' Report on Food Production

REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, shortly Hon. Marvin Jones, Administrator of the War Food Administration, will retire and resume his duties as a member of the United States Court of Claims.

No Administrator could have administered the War Food Administration in time of a great war without making some mistakes, and it would have been impossible to please everyone, yet, on the whole, I think the American people are agreed that Judge Marvin Jones has done an excellent job in a most difficult period, and those of us who know him personally and who served with him in the House throughout the years know that he has conscientiously and ably performed his difficult task and has rendered a real service to his country in time of war, for which the American people should be grateful.

Recently he issued a brief letter addressed to the Members of the Senate and the House, summing up, in a few words, some of the accomplishments of

the War Food Administration during this war.

It is not only a tribute to the effectiveness of the War Food Administration, but is a tribute also to the American farmers and the farm workers of America to have accomplished what they have, and the record made by the farmers of America will go down in history as one of the outstanding achievements of this war. Under leave granted, Judge Jones' letter is submitted herewith:

WAR FOOD ADMINISTRATION,
Washington, May 24, 1945.

To Members of the Senate and the House of Representatives:

We are getting many requests for information on what has actually been done in the production and use of food during the years of the present war, as compared with the last war. Our people are increasingly aware of the vital importance of food in the total war effort, and I am sure you will be interested in having the important facts.

Here are the answers to the more general questions:

"The United States has produced 50 percent more food annually in this war than in World War I.

"With 10 percent fewer workers on farms, and with total national population up a third, our people have had about 10 percent more food per capita during this war than in the 1917–18 period.

"During the present conflict, twice as much food has gone annually to the armed services and for overseas shipments as was used for these noncivilian outlets each year of the last war."

This record has been accomplished notwithstanding a shortage of labor and machinery, and many other handicaps.

These are the highlights of the situation, comparing food in the two wars. A table giving details on production of key commodities, with total production and per capita consumption percentages, is reproduced on the other side of this letter for your reference.

In view of the fact that the primary obligation of the War Food Administration is to assist in securing war food production, we take pride in this magnificent production record.

Sincerely yours,

MARVIN JONES,
Administrator.

Production of selected agricultural products, total population, farm employment and index number of food consumption and agricultural production, selected years

Item	Unit	1910-14 average	1917	1918	1935-39 average	1942	1943	1944

Utopia

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. DONDERO. Mr. Speaker, under leave granted by the House to extend my remarks, I include therein an article taken from the Detroiter for June 4, 1945.

Apparently there are a few people in England who keep their feet on the ground and their heads out of the clouds. One British industrialist has had the audacity to write an article entitled "Obstacles to Prosperity" in which he quotes a leader high in the Government of the United States and is clearly disturbed that there are leaders in England who are pledged to the same doctrine as we hear from high quarters in this country. That doctrine is "spend more than we make so you can get rich."

No one has ever conceived a system of government that is superior to simple arithmetic or honest work.

Such a program as outlined in the article mentioned does not mean utopia but means destruction and not prosperity:

SPEND MORE—GET RICH?

Evidently the industrial leaders of England—as well as those of the United States—are facing serious problems. We have received from John R. Millar, Detroit, an article entitled "Obstacles to Prosperity," which was published by a British industralist who is bemoaning the fact that there are many leaders there "who are preaching the same doctrine advocated by Marriner Eccles, namely, 'Spend more than you make so you can get rich.'" The article goes on to show that labor leaders and economists say:

"Five years of destruction on a scale unknown in the world's long history are but the prelude to an era of universal plenty with a minimum of effort on the part of the individual. The standard of living is to rise, not only here but in all the wide spaces and the remote corners of the world; hours of labor are to be shortened; and work is to be carried on to an accompaniment of music, breaks for tea and private conversation, and comparison of notes on the symptoms of industrial fatigue.

"Work will thus be dignified, and the remarkable discovery will be made that, with every reduction of hours of labor production increases alike in quality and quantity, till it reaches its peak at the point when no one does anything at all. That will be the great triumph of the century. It will be the final justification of industrialism and the machine.

"All that will remain will be for the psychoanalysts to diagnose what is wrong with leisure and to suggest remedies for overcoming its evident frustations. More entertainment, perhaps, to relieve its monotony, more frequent introductions of tea and gossip, more exchanges of confidences on individual experiences of leisure fatigue, with an occasional address by the Minister of Labor on his success in abolishing the evil of employment, as he once abolished that of unemployment."

Lend-Lease Report to Congress

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the nineteenth lend-lease report to Congress was made a few days ago by President Truman, and an editorial appeared in the Washington Post of May 26 relative thereto, which, under leave granted, is submitted herewith:

LEND-LEASE REPORT

Lend-lease, the secret weapon that welded the United Nations into a unity and gave them the overwhelming strength with which

to crush Germany, is now to be turned full force against Japan. This is the keynote of the letter of transmittal accompanying the nineteenth lend-lease report to Congress—the first such letter to bear the signature of Harry S. Truman. "While the bulk of the United Nations forces were engaging the Nazis in Europe," he wrote, "Allied forces succeeded in piercing the perimeter of Japanese defenses and established the bases from which decisive offensives can be launched. Now all of the might and power of the United States, the British Empire, France, the Netherlands, and our other Allies can be brought to bear, together with the Chinese forces, against Japan."

Although lend-lease supplies thus far have been devoted principally to the war in Europe, they have been provided also, in such quantities as were available, to the Allied military and naval forces battling the Japanese. And these Allies, through reverse lend-lease, have significantly aided our troops in the Pacific, especially by supplying them with foodstuffs. Our shipping difficulties would have been enormously aggravated had it not been for this facet of the mutual-aid system. We have received from Australia, for example, a total of more than $720,600,000 worth of reverse lend-lease; from New Zealand, $171,400,000 worth; from India, $411,900,000 worth. French, Belgian, and Netherlands colonies made their contributions, too.

It was thought necessary in the nineteenth lend-lease report to refute a number of absurd and mischevious rumors to the effect that the civilian populations in Allied countries are being given all sorts of scarce supplies for peacetime purposes at the expense of civilians here. Lend-lease has had from its inception, a single, simple purpose—the effective utilization of the manpower and resources of all the United Nations. It has served us well. It would be tragic now to let it be beclouded by misconceptions, for it still has a great and vital task to perform.

The Students of the University of Nebraska Write a Peace Treaty

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1945

Mr. CURTIS. Mr. Speaker, the University of Nebraska held a miniature peace conference. Various campus groups represented the individual nations of the world. It was a most worthwhile project. It was very apparent that these students were well grounded in history, geography, and current events.

Under leave to extend my remarks, I include a summary of the peace treaty that was adopted:

SUMMARY OF TREATY OF PEACE AS ADOPTED AT THE FINAL PLENARY SESSION AT THE UNIVERSITY OF NEBRASKA PEACE CONFERENCE ON MARCH 9, 1945

The treaty provides for a world security organization as follows: (1) Dumbarton Oaks plan with some alterations and additions providing initial membership comprising all of the United Nations with other states admitted by three-fourths vote of the Assembly, (2) for 4 years punitive measures require a two-thirds vote including all of the permanent members excepting an accused state which shall be deprived at the time of the right to vote. Economic sanction must be tried before a military. At the end of 5 years there shall be a conference to consider renewing those rules. (3) regional organization. (4) the retention of the present World Court but with compulsory jurisdiction in justiciable cases.

Regarding war criminals it is provided: (1) Two commissions to deal with the subject, one for the Far East, and one for western states, (2) that these commissions deal with arch criminals directly and with other criminals if national courts fail to do so, (3) that the commission authorize the boycott of neutrals giving asylum to such criminals, (4) that the commissions encourage national courts to take jurisdiction.

Regarding territorial settlement of eastern Asia it is provided: (1) an independent Korea, (2) Manchuria shall go to China, (3) China free, with foreign concessions and settlements terminated, Hong Kong returned to China, but a British naval base there for 10 years, (4) Siam independent, (5) Indochina returned to France.

Regarding territorial settlement of Germany it is provided: (1) France to have Alace-Lorraine, and the Saar Basin, (2) adjustment of Dutch boundary in favor of Netherlands, (3) Flensburg to Denmark, (4) internationalization of Rhineland, the Ruhr, Heligoland, and Kiel Canal, (5) eastern boundary the Oder River, (6) Austria and Czechoslovakia boundaries as of 1938, (7) integrity of the rest of Germany.

Regarding territorial settlement of eastern Europe it is provided: (1) Curzon line with modification of 5 to 8 kilometers, (2) Dardenelles free, (3) division of East Prussia, most of it to Poland and the rest to Russia.

Regarding territorial settlement of Central Europe and the Balkans it is provided: (1) Balkan federation, (2) East Thrace to Greece, (3) South Dobrudja to Bulgaria, (4) Salonika a free port, (5) plebiscite on Macedonian independence, (6) Transylvania to Rumania for 7 years, then a plebiscite.

Regarding territorial settlement of Italy it is provided: (1) Istria to Yugoslavia, with Trieste a free city, (2) Dalmatian coast to Yugoslavia, (3) Nice and Corsica to remain French, (4) Albania free, (5) Trentino divided according to Austrian proposal in 1915.

Regarding colonies and mandates it is provided: (1) Retention of mandate system with improvements, (2) Formosa and Pescadores to China, (3) islands formerly mandated to Japan and the Bonins to be under United States mandate, (4) South Sakhalian to Russia, (5) northeast Libya to Britain, the remainder a French mandate, (6) Ethiopia independent, (7) Rhodes and Dodecanese to Greece, (8) Pantelleria to Britain.

Regarding the treatment of Germany, it is provided: (1) Reparations in kind as fixed by a commission, (2) disarmament of Germany, (3) military occupation by Great Britain, United States, and Union of Soviet Socialist Republics, (4) reeducation, (5) control of German cartels, (6) temporary government by the United Nations.

Regarding the treatment of Japan, it is provided: (1) industrial reparations to China, (2) disarmament of Japan, (3) military occupation by United States, China, Great Britain, and Russia (if at war), (4) reeducation, (5) removal of the Emperor, (6) provisional government under the United Nations, but ultimately a new government based on Japanese wishes.

In regard to ethnic groups, it is provided: (1) Right of peoples forcibly moved by Germans to return, (2) an international bill of rights, (3) retention of the League system of protecting minorities, (4) establishment of Jewish homeland.

In regard to economic and social matters, it is provided: (1) replacement of International Labor Office by a commission of the Economic Council of the United Nations, (2) a conference to consider elimination of trade barriers, (3) a commission to deal with cartels, (4) international monetary fund, (5) an agency to control air navigation.

Puerto Rico

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. FERNANDEZ. Mr. Speaker, under leave granted to extend my remarks, I call attention to a very timely editorial on the political status of Puerto Rico, which appeared in the Washington Post this morning. This editorial reads as follows:

PUERTO RICO

Puerto Rico presents a live, urgent, and real test of trusteeship right in our own back yard. We shall have to meet it a great deal more satisfactorily than we have met it in the past if we are to lecture the British and the French on colonial policy with any ease of conscience. Puerto Rico's economic situation is too desperate to be solved either by haphazard handouts to it as a dependent territory or by a grandiose grant of independence which would transform the island into a graveyard.

The existing relationship to the United States perpetuates an undemocratic system of government in Puerto Rico. As Secretary Ickes observed a year ago, "Those who lose local elections, and those who are dissatisfied with local affairs, attack the Federal and insular officials and appeal directly to the Congress upon matters of purely local concern which should be decided in Puerto Rico." This situation has not only promoted a sense of insecurity and injustice among Puerto Ricans; it has also, until now, kept them from agreement upon effective and permanent resolution of their political future. If one group in the island put forward a proposal for independence, an opposing political faction at once clamored for statehood or some alternative status.

Now, however, Senator Luis Muñoz Marín, President of the Insular Senate and head of the majority party in the island, the Popular Democrats, has come to Washington at the head of a delegation representing all parties with a proposal unanimously adopted by the Legislature of Puerto Rico. This proposal has been embodied in a bill introduced by Senator TYDINGS. Under it, three alternative forms of political status—independence, statehood, and dominion relationship to the United States—would be submitted to a referendum of the people of Puerto Rico. Whichever form secured an absolute popular majority would then be carried into effect.

This strikes us as a sensible and democratic procedure. Earlier this year, R. G. Tugwell, Governor of Puerto Rico, said in his message to the legislature that "it would be unfair to propose a plebiscite which had not been authorized and defined by the Congress. To do so would be to ask Puerto Ricans to choose among alternatives which might seem completely unreal. * * * Fairness to everyone requires that the Congress offer the choices it is willing to accept rather than to require that Puerto Ricans should petition for status with the risk of rejection."

At the same time, we feel that Congress would be well advised to rule out the alternative of statehood. We doubt the advisability of including in the Union an area which is not a part of our continental land mass. There is no doubt, however, that Puerto Rico, in our own interest as well as hers, ought to maintain a close liaison in which her aspirations for self-government will be realized. Whatever the future political status of the island, it is clear that it must embrace two essentials—provision for

permanent military bases by which the United States can protect the welfare of this hemisphere and economic arrangements which will permit Puerto Ricans to enjoy real freedom rather than famine.

These essentials are embraced both in the formula for independence and in the formula for dominion status as outlined in the bill which Senator TYDINGS has offered on behalf of the island legislature. Independence, as there defined, would mean complete sovereighty, save for our military and naval installations, together with a free-trade relationship with the United States, except for tariffs imposed by mutual consent. Dominion status would mean local sovereignty without statehood, but with dual citizenship, liability to service in the armed forces of the United States and subordination to the United States in foreign affairs. It would also embrace free trade. The choice between these two approaches to their future ought to be made by the Puerto Ricans. We have an opportunity now, in dealing with their plea for self-determination, to provide a model of trusteeship for the world.

Credits to Soviet Agencies in the United States

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. OUTLAND. Mr. Speaker, so much misinformation is being spread these days about the relations between this country and our ally against Germany, Soviet Russia, that it seems to me every opportunity should be seized to present facts. With this in mind I am including, as a portion of my extension of remarks, an article by E. C. Ropes, Chief of the Russian Unit, Bureau of Foreign and Domestic Commerce, United States Department of Commerce, entitled "Credits to Soviet Agencies in the United States":

CREDITS TO SOVIET AGENCIES IN THE UNITED STATES—A HISTORICAL REVIEW

(By E. C. Ropes, Chief, Russian Unit, Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce)

The history of the extension of credits to Soviet agencies in the United States, to finance exports or for other purposes, could be covered adequately only in a volume of considerable size. In this short article it is possible to bring out hardly more than the high points, which form a curve with abrupt lows and highs, culminating with proposed credits of billions for postwar Soviet purchases which do not arouse as much concern as those for a few millions did in the late twenties. It is not out of the way to say that as a credit risk the Soviet Union has traversed the distance from zero to one of the highest rated in the world, and in popular esteem from the position of a distrusted disturber of world peace to that of a country without whose aid that peace will be impossible of attainment.

The extension of credit in any amount to Soviet buying agencies in the United States really began only after the establishment in 1924 of the Amtorg Trading Corp., as a consolidation of the Products Exchange Corp. and the Arcos-America Ltd., both New York State corporations. These, and the Centrosoyuz America, an agent of the Russian cooperatives, obtained a few short-term credits in their purchasing, but not enough to establish the Amtorg, as their successor, with sufficient standing in the eyes of American sellers and banks to justify a line of credit on goods worth millions of dollars for which the Amtorg at once began shopping. The billion dollars' worth of orders for United States products which Ludwig Martens in 1919 had dangled before the eyes of manufacturers and exporters held insufficient lure to attract loans to cover, and the attempts of Amtorg along similar lines met with the same reception. Only the All-Russian Textile Syndicate, in buying hundreds of thousands of bales of cotton, was able to persuade the Chase National Bank to finance its shiploads sent to Murmansk, and it has always been understood that that bank did not fail to protect itself against possible defaults in payment, by requiring adequate deposits to Amtorg account to cover itself in case of need—a need which, it may be noted, never arose.

In 1926, therefore, the Amtorg, when buying from American manufacturers in the United States, found itself usually obliged to pay cash on shipment, even at times with order; discounts for cash were occasionally offered and taken. Always, even when short credits were allowed, from 30 to 75 percent of the invoice was on a cash basis, with the balance running from 3 to 12 months. There was no general agreement on terms, each manufacturer making his own agreement, dependent on his usual export practice, the pressure of competition from rival manufacturers, and his own financial resources.

FIRST CREDIT CORPORATION

By 1927 the picture had improved somewhat for the Amtorg, though the general situation had not changed. This improvement was brought about by the establishment in New York of a corporation, later followed by others, to discount the credit portion of invoices presented to Amtorg, the portion covered by acceptances running up to 12 or more months, and carrying interest at 6 percent. The first company, the Industrial Credit Corporation, headed by a former American Amtorg official, secured the bulk of the business, and was understood to represent investors in the United States, Germany, France, and the United Kingdom who had confidence in Amtorg's ability to pay and were willing to wait until the acceptances matured.

For the service of providing cash to impatient or needy manufacturers, the rate of discount without recourse was high, up to a maximum of 45 percent of the face of an acceptance. But it may be assumed that, when possible, selling prices to Amtorg were adjusted to cover the cost of disposal of the paper, there is no record in this period of any manufacturer complaining of the ultimate results of the practice or refusing to sell to Amtorg except for cash. Indeed, there are cases known where Amtorg business in an otherwise slack market may have saved a manufacturer from the need of shutting down, temporarily or permanently. Particularly is this probably the case with the smaller machine-tool building firms and the manufacturers of oil-well machinery, who were faced with a low demand for their products at home and abroad.

It must be remembered that this situation prevailed in the United States, with Amtorg the only large potential buyer and manufacturers competing strenuously for all business, at a time when Soviet purchases in Germany were being eagerly financed by the German Government, although at fairly high rates and prices. The German example was followed by other European countries and later even by the United Kingdom and Japan. It is not surprising that the Amtorg pressed for credits in the United States on the strength of the credit standing of the Soviet Government in Europe, which enabled it to run up a large foreign debt for goods purchased abroad to carry on its drive for industrialization under the first 5-year plan.

THREAT TO CREDIT POSITION

Yet this very success in obtaining credits abroad became a threat to the credit position of the Soviet Government, which was always regarded as the real principal behind Soviet buying agencies abroad. Foreign purchases could be paid for only in goods or gold exported, and the maximum term on credits, even in Germany, was 5 years. Soviet gold production at that time was low, about 1,000,000 ounces a year, and Germany claimed all that could be spared. It has been estimated that prices dropped about 40 percent on goods exported from the Soviet Union and many sales were made under great resistance both from the home market against selling and the foreign markets against buying, except at prices below the world or local levels.

The situation that resulted from the overextension of Soviet purchasing on credit, and the difficulties the Soviet Government met in procuring and selling the goods with which to meet its obligations, even under the rigid control of foreign trade by the state monopoly, naturally reacted against the Amtorg in its persistent demand for credits. Nor did the successful negotiation of a contract with the International General Electric Co.—for generators and other electrical machinery to a value of $26,000,000, with payments spread over 5 years—have any effect on the general resistance of manufacturers to granting the Amtorg similar terms on orders placed in the United States.

The Soviet authorities, however, temporarily succeeded in balancing outgo with income, by drastic reduction of imports, and in maintaining their reputation for prompt payment. A survey made in 1929 in the United States emphasized this reputation: While the terms of sale to the Amtorg varied considerably in the amount of cash demanded and the proportion and length of the credit portion of an invoice, there was no variation in the record of the Amtorg for paying as agreed.

By 1930 rumors began to circulate of a possible crop failure in the Soviet Union, threatening the largest export, grains, and of the possibility of another famine like that of 1921. Yet during that year, in spite of the refusal of United States banks to finance Soviet orders, it was estimated that credits to the Amtorg rose to a high of $80,000,000, dropping to $40,000,000 by the end of the year. The maximum term for which credit was given seldom exceeded 18 months, and the discount rate on Amtorg paper in July 1931 remained at 25 percent.

The American Manufacturers Export Association was reported in the press as advising terms of payment of 50 percent of invoice "down" or on shipment of goods, and a maximum of 6 months for the balance. But in certain fields of industry, like shipbuilding, much longer credits were urged by the manufacturers interested, although no orders resulted from this propaganda. Even the conservative banking fraternity was attracted by a proposal made in September 1931 for the creation of a special bank whose business it would be to disccunt Amtorg acceptances; but this plan also failed to develop into actuality. The memory of the Tsarist bonds floated in New York in 1916 was still too fresh.

RFC LOAN IN 1933

In the meantime, however, the Amtorg had firmly established itself as a bulk buyer of machine tools and similar equipment, and the Soviet Government had contemplated its first 5-year plan and launched the second, for the execution of which much machinery had to be purchased abroad. Preference was shown for Germany and the United Kingdom, where government-guaranteed credits were available. Congress was not willing to enter the field of guaranteeing payment for goods

exported, under an extension of the Reconstruction Finance Act; the question of recognition by the United States of the Soviet regime was a further complicating factor in the situation. Many favored such recognition as a spur to lagging trade; others proposed a huge barter arrangement, whereby exports to the Soviet Union should be balanced by imports from that country.

The only actual result of all the discussion was a loan in July 1933 of $4,000,000 from the Reconstruction Finance Corporation to the Amtorg, to enable the latter to purchase, and pay for in a year, about 75,000 bales of cotton, of which there was a large surplus in the country. Repayment of this loan, it may be added, was made promptly. It was not followed, however, by any further large sales of cotton or textile goods on credit, as urged by some manufacturers of the latter.

Nor did private efforts to set up a discount bank, to function as a channel by which sellers to Amtorg could shift their risks to the Reconstruction Finance Corporation, ever get beyond the stage of obtaining favorable publicity and support from a number of prominent manufacturers. Other similar plans, which took their cue from Mr. Litvinov's offer in London in June 1933 of "$1,000,000,000 worth of orders" if a credit of that amount were offered by the countries interested, seldom even reached the public through the press.

EFFECT OF RECOGNITION

Recognition of the Soviet Union in November 1933 did not of itself affect favorably or unfavorably the Amtorg's credit standing. This continued to be dependent on the international financial position of the Soviet Government, which now, however, was becoming steadily stronger. The peak of the foreign debts assumed earlier had been weathered, no defaults marred the record of payment, and the economic situation of the Soviet Union had definitely begun to improve. The position of the Amtorg as a credit risk naturally reflected these favorable developments; its purchases on credit became an accepted custom with manufacturers and there was even some extension in the maximum terms granted. But the total of the orders placed in the United States was small, even taking into consideration the reduction in Soviet imports from all countries in 1933, and pressure for longer credits to permit larger purchases became insistent, usually in the form of a demand for United States Government support of individual exporters in their extension of the credits demanded. One proposal which received much publicity involved utilization of the newly-formed Export-Import Bank for Trade with Russia, a Government organization, to finance large credits with a term of 25 years. But for a number of reasons, few of which have ever been publicly disclosed, this bank was never allowed to function, and was finally closed.

Little actual change was to be noted at this time in the length of the credits extended to the Amtorg. They still seldom exceeded a maximum of 18 months, although some large sales were recorded without any cash payments, 100 percent of invoice being payable in 12 months. The interest rate on acceptances was reduced to 5 percent, however, and the discount rate dropped to 12 and later, by 1936, to 8 percent. The Soviet foreign debt had been reduced, by January 1, 1935, to $150,000,000, and was not considered as a factor affecting the credit standing of the Amtorg.

More and more manufacturers and exporters accepted Amtorg orders, but their habit of years of selling for export for cash was a deterrent to the kind of mutual confidence and spirit of cooperation that the steadily increasing business relations should have engendered. On the one hand there was the confirmed custom of United States firms, on the other the insistence by the Amtorg on a change in that custom. The show went on, but there was a ghost behind the scenes, which occasionally made its presence uncomfortably felt.

NEW AMTORG POLICY

This condition persisted until 1938, when the Amtorg itself "cut the Gordian knot" by announcing that henceforth all purchases would be made on the basis of cash 45 days after the shipment of goods, the delay being necessary to permit time for inspection of the goods after their arrival in the U. S. S. R. This new policy proved readily acceptable to most firms seling to the Amtorg, and was maintained until 1939, when exports from the United States were seriousy reduced by the outbreak of war in Europe. Although these rose again, in 1940, by 50 percent over 1939, the question of credit did not arise, for the need of the Soviet Union for the products then available only in the United States market was paramount, and the new basis of payment, now well established, was satisfactory to both buyer and sellers.

The ghost was laid, at least for the duration of the war. What will happen after the end of that struggle is unpredictable.

Yalta Conference

REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. DIRKSEN. Mr. Speaker, this morning I received several telegrams similar in content, which read as follows:

PEORIA, ILL., *June 4, 1945.*

Hon. EVERETT M. DIRKSEN,
Congressman from Illinois,
Washington, D. C.:

Americans of Serbian descent urge your support in requesting that Dictator Tito stop imposing a totalitarian regime by terror and ask that the provisions made by Big Three at Yalta regarding Yugoslavia be carried out, otherwise our claims of fighting for democracy are a sham.

SERBIAN LODGE NO. 50 OF SERB NATIONAL FEDERATION, PEORIA, ILL.,
NICH LACANSKI, *President.*
ZIVAN ALEKSICH, *Secretary.*

PEORIA, ILL., *June 5, 1945.*

Hon. EVERETT M. DIRKSEN,
Congressman from Illinois,
Washington, D. C.:

Americans of Serbian descent urge your support in requesting that Dictator Tito stop imposing a totalitarian regime by terror and ask that the provisions made by Big Three at Yalta regarding Yugoslavia be carried out, otherwise our claims of fighting for democracy are a sham.

SERBIAN NATIONAL DEFENSE COMMITTEE OF AMERICA, PEORIA, ILL.,
TIMA BOOKVICH, *President.*
VUKSOIN GRUYICH, *Secretary.*

The reason I allude to that at this time is simply this: I have been rather reluctant to discuss some political aspects of the recent sojourn that I made abroad. Time did not permit before, but I do want to say, and certainly will do so circumspectly without roiling the waters or embarrassing those in high position, that I believe the time has arrived now when there should be some rather frank and exploratory discussion of this matter. So, Mr. Speaker, I ask unanimous consent that on June 14 I be given permission to address the House for 1 hour on this general subject, after the disposition of other business. That will be Flag Day, and a most suitable occasion for some observations on matters which are of real import to those who live under the flag of this Republic.

Memorial Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a radio address delivered by me as the guest speaker over radio station WLLH, Lawrence, Mass., on May 30, 1945. This program was sponsored by the Department of Massachusetts, American Legion Auxiliary, and was conducted by Kathryn E. Harty, department vice chairman of radio in Massachusetts:

We pause in this, the most decisive year of history, to think of our dead.

The scene is much the same as it was when we, the grown-ups, were children. The solemn beauty of Lincoln's Gettysburg Address, the uniformed veterans of this and former wars, the bands, the flowers, the bright little flags in the cemetery—here is the annual pilgrimage of America at the end of the month of May. All over these sacred fields we see the living, some coming, some going, others motionless as they kneel in prayer.

It looks the same as so many other Memorial Days that we can remember, yet we sense a difference. Here is no mere routine, dulled by unthinking repetition. In sad and silent wonder we recall the looks and speech of loved ones who are gathered in the embrace of kind earth. This plot of ground, this tablet, they comfort us with the knowledge that those we knew are free from pain and fear. Today, however, the loss we feel is more than a personal emotion. It reaches out to share the grief of a community, a nation, a world. This day we think of others who are buried in the far, strange places of this earth. From Normandy to Okinawa, from Italian hillsides to ocean depths they rest. We think of them; we think of those who are dying at this moment, and of those who must die so long before their time. This Memorial Day is different.

Out of the anguish of our present trials we must come forth strong and steadfast to carry through the task for which so many have fallen. Here, in the company of the dead, we become aware of our own brief time on earth and of the work that must be done. Through us and those who follow us, they who lie here depend for the fulfillment of their mission.

They were, they are, so young—these men who die for us. Not lightly have they given up the chance to love, to found families, to have children; to experience joys, sorrows,

and responsibilities together; to bring gifts to life which the world so sorely needs; to dream dreams that we shall never know. Their eager voices are like music that dies on the wind while we strain our ears to hear the melody that is stilled forever.

Not lightly have they given all, for the burden of their giving falls on us. We must now do and speak for them. In this we cannot fail. Before the desperate challenge of aggression they gave body, mind, and faith, all the bright promise of years to be lived. They gave so fully, believing and trusting in us to redeem their sacrifice.

Are we ready? Are we now thinking, planning, working toward the great and difficult goal of lasting peace? For this is the only memorial that can fittingly honor their giving. Think hard and earnestly, my friends, because this is no idle pledge to be lightly made and as easily forgotten. This is the supreme responsibility of our times. All the victims of cruelty and greed, all the legions who have perished in war since the beginning of history, weigh heavily on our consciousness this day. The grim facts speak for themselves. We know, all too well, that the issue is now clearly drawn. It is, "Eliminate war, or it will eliminate civilization." Through the murmuring grass that covers the dead we seem to hear this warning. We read it in the faces of the bereaved. We see it in the crippled minds and bodies that fill our military and our veterans' hospitals.

In our generation this menace has reached a climax. There may be some who wish they had been born earlier or could live later than this present crisis but wishing will not relieve them of responsibility. We've got to outlaw aggression. We've got to build a peace that will work. There is no other way. From those who have died to those as yet unborn, it is we, the living who must build or destroy the continuity of civilization. The hopes of the past and the heritage of the future are passing through our hands. You and I will decide, for better or worse, the outcome of this challenge to humanity.

Little boys and girls, in childish innocence, are playing on this Memorial Day. Free from the restraints of school, their happy energy is matching the springtime of the year. Some are playing the game of war. It is exciting and full of heroic exploits. The evil enemy is quickly and decisively beaten, and no one on our side is hurt. It is so much fun, this playing at make-believe. But the world in which they will grow up, will be far different from this convenient, imaginary world of childhood. It may be a world of bloodshed and anarchy. It may be a world in which the children of today would become men and women in name only, condemned to hopeless slavery. Or it might find them prowling, like subhuman creatures in the blackened ruins of great cities or clawing for roots in the jungle-weeds of abandoned farms. All this could and might come to pass if we fail them now.

On the other hand, these laughing children of today may grow up into a world of friendly human fellowship, enjoying material, cultural, and spiritual values beyond our vision, if we make the world safe for them. Chaos or progress, which shall it be? To have a civilization that is worthy of humanity will require great efforts, the best in each and every one of us. Our world stands poised on a very delicate balance, uncertain of its course. Any delay on our part, any evasion of our responsibility, will decide whether these children playing on Memorial Day in the year 1945 will inherit a world of hope or a dark world of despair.

Through the mysterious barriers which separate the living from the dead, the voice of one so recently gone seems to come to our ears again. Or maybe it is just the memory of a vital and valiant personality who lives on in our hearts. This man fell in the line of duty, fighting not only for the life of civilization but for its progressive future. He is the spokesman for all those who died that we might live. His faith-inspiring voice, undimmed by death, is with us yet. It says, "Have no fear. Go forward. You can and will reach the high goal of a just and permanent peace. Fellow Americans, humanity itself depends on you. I know that you will do this job."

Up from the paralysis of domestic failures, this bright spirit led us. With the world vision that was so truly his, he saw the gathering storm long before the millions of Americans wakened to their peril. With brave and brilliant leadership he brought us from the brink of defeat to the crest of victory. Even as we were vindicating the strength and enterprise of our democracy in the agony of war, he was drawing blueprints for the most sublime creation man ever dared to conceive—the functional architecture of a durable, serviceable peace. His tireless, eager spirit, however, was stronger than the mortal frame which housed it and gave it human being. Worn out by constant labor, the flesh died and the great spirit burst its bonds. Our Nation had lost one of its finest leaders. The ordinary people of this world had lost a true friend. The cause of freedom had suffered its most serious casualty. Franklin D. Roosevelt was gone.

Why he should have been taken from us at the very moment we needed him most only an all-wise Providence knows. This much we do know, he revitalized our complacent democracy, giving it a deeper meaning, a wider application.

To the millions of unemployed in our country he brought freedom of opportunity, the right of all men and women to have self-supporting jobs. To humble people all over the world he became the champion of human rights. Fear-burdened men looked up as they heard his hopeful voice assuring them that the world was a neighborhood and calling upon them to join with him in promoting the general welfare.

He spoke for a new American democracy that is creedless because it is a composite of the fundamental good in all creeds. It is raceless because it is a blend of all racial qualities. By this common denominator of our Americanism we shall be strong, just, and united as we face the stern tasks that lie ahead.

He spoke these truths that make us brothers and they became a part of our American way of life. Today, he is the shining symbol of all the hero dead we mourn. Like him, they lived and died for ends far nobler than the narrow claims of self. These martyrs in the cause of human dignity have left us a spiritual heritage which we cannot deny. Through us, in time, it must pass to other men as a glowing inspiration to truth and goodness. This, the immortal spirit of free and responsible men, is the last, best hope of earth.

Though lilacs bloom in purple requiem, the world is green with life and hope. After the long winter of our discontent, the sun breaks through again. We rise from our knees, our eyes still lingering on the graves of those we knew. Sleep well, dear friends, your share of the work is done.

Today, in spiritual communion with them, we have consecrated ourselves to carry on their task and bring it ever nearer to fulfillment. Today, we have given humble thanks to the faith and courage which they have bequeathed to us by their example.

And so we leave the dead and face forward to the urgent demands of life. The burden of our responsibility is heavy but we cannot fail. With God's help we shall not fail. The fate of our world depends upon us, the living, in this hour of great decision.

What Do We Mean?

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids (Mich.) Press of May 29, 1945:

WHAT DO WE MEAN?

Secretary of Commerce Henry Wallace is giving very serious thought, he says, to a series of questions just asked him by Robert Gaylord, board chairman of the National Association of Manufacturers.

And all other Americans could well be giving consideration to these questions, too.

No. 1 is this: "Private enterprise must be subject to regulation by the Government. Everyone accepts that. The only question is, How far can that regulation go before it changes private enterprise into controlled or public enterprise?"

Some have suggested that so long as regulation is by law, so that every man and every enterprise may know in advance what rules must be obeyed but can then operate freely and with confidence within those rules, private enterprise is not endangered; but if regulation becomes a mere caprice of a vast bureaucracy, changing its own rules overnight and discriminating as it pleases, there is no real freedom of enterprise left. Probably this definition is too simple; but certainly we do need to know the point at which postwar regulation must stop if we are to keep free enterprise as the basis of our national life. Not only Mr. Wallace but the Nation in general needs to do some hard and practical thinking on this matter. President Truman already is starting a sincere attack on the problem of excess bureaus. The freeing of business from the dead hand of red tape and petty regulation by incompetents is a vitally important step on which some reconversion could well begin at once.

Another question asked by Mr. Gaylord is this: "If we are to increase employment through expanded private enterprise, it follows that private investors must be persuaded to put their money to risk in order to make that production possible. What are the potentialities for private enterprise and what are the opportunities for private investment?"

This country was built up on the investment of people who took risks with their money to get new enterprises—and expansions of old enterprises—under way. Some of them lost; some of them gained. The incentives to risk private funds must be restored. Recently the Securities and Exchange Commission in order to help small business raised from $100,000 to $300,000 the amount of securities which a business could offer the public in any year's period without formal registration. This may indicate a trend toward a return to more open marketing conditions. But a certain "climate" must also be created within which citizens will feel that they can risk their funds in a business on the basis of their judgment of its management and product, without worrying hopelessly about general tax and regulation policies which can change overnight and upset the best managed and planned private enterprise.

Then Mr. Gaylord asks a question also about those public enterprises which are to

be continued in operation by the government after the war. He points out that all the citizens of this country are investors, by reason of taxes, in these enterprises—and all are stockholders, too, by reason of their vote. He inquires: "are not these investors and stockholders entitled to the same information about public enterprise that private management gives to them as stockholders and investors in private enterprise?"

We have the spectacle today of a government which is ultra-cautious about requiring private business reports to stockholders while at the same time it operates more than a hundred public corporations and does as it pleases about accounting for those operations or keeping their business a mystery. Certainly uniform accounting to the people on how their money is invested in these operations is just as important as the accounting on their private investments. Otherwise they will never know what should be done about keeping or abandoning these vast Federal ventures into enterprises of many types.

Finally, Mr. Gaylord asks a couple of questions about foreign trade. "Our exports," he notes, "are limited by our ability to import at some time and in some form. Temporarily we may loan money to make payment of our exports possible, but in the long run we must accept payment in goods or services from those who buy our products. If we increase our imports we will have little difficulty in expanding our exports. Just what kind of imports can our country make profitably?"

That's one issue on which we shall require a real policy very soon, unless we intend to pour out goods indefinitely without any return whatever. And here's another—the vague public objection to cartels set up in foreign nations to monopolize all foreign trade and prevent its conduct by individual enterprises on a free competitive basis. Mr. Gaylord wants cartels clearly defined. Facing the fact that cartels whether we like it or not are going to conduct all the foreign business of a number of countries, he wants to know whether it is in the public interest that American businessmen try to get some of the foreign business of these cartels. If we decide they should, he wants to know "How can they do this in a way that will not interfere with the play of competition in this country?"

These seem very sensible questions to ask the Secretary of Commerce. Mr. Wallace is turning the Gaylord letter over to "a special committee which we have set up in the department." We may well hope the questions aren't pigeonholed there, for a frank answer on Government policy—an answer all Americans can understand and trust—needs to be forthcoming very soon. The piping days of war are running out.

Hampton Pitts Fulmer

MEMORIAL ADDRESS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. HAMPTON PITTS FULMER, late a Representative from the State of South Carolina

Mr. LUTHER A. JOHNSON. Mr. Speaker, the memorial exercises held in the House today, honoring our departed colleagues who have died during the past year, like all these annual memorial exercises, are impressive.

The number of deaths during the past year is smaller than usual, there being only three from the Senate and three from the House.

The senior Member of the House delegation whose memory we honor today is Hon. HAMPTON PITTS FULMER of the Second Congressional District of South Carolina. He was first elected to the House in 1920 and served continuously as a Member of this body for nearly 24 years. At the time of his death he was chairman of the Committee on Agriculture, having succeeded Hon. Marvin Jones as chairman of that committee upon Mr. Jones' retirement from the House. He had been in ill health for several years, but remained at his post of duty and carried on notwithstanding his illness.

The people of his district demonstrated their faith and confidence in him by having chosen him as their representative in Congress in 12 different elections, and he kept the faith by ably representing them during his long service in the House.

It has been my privilege during my entire service in the House to know HAMP FULMER, as his intimate friends called him, he having been elected to Congress 2 years before I became a Member. He was my friend and I had an affectionate regard for him and shall miss him and mourn his loss, and sympathize most deeply with his wife and family in their bereavement.

Address of Gen. O. N. Bradley to the Graduating Class at West Point

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Gen. O. N. Bradley, commanding Twelfth Army Group, June 5, 1945:

General Wilby, distinguished guests, and gentlemen of the corps:

To you wartime graduates, I bring the congratulations of your comrades overseas on your completion of this first phase of your service in the Army.

With the peacetime course of 4 years compressed into three, your instructional period at West Point has been made more urgent by the tempo of these times. Your class has been shadowed by headline world events, demonstrating need for the leadership you have been trained to provide.

We are certain you bring to the commissioned ranks those continuing standards of duty and honor that are the great contributions of this institution.

Relatively few people are acquainted with the complexity and enormity of war as it is fought today. I have seen something of war during the last 2½ years, yet I confess that I sometimes feel I know very little about it.

It was just 1 year ago today that our invasion army sailed from the south coast of England to assault the Continent of Europe. And although we had been planning it for months, many of us were surprised by the fleet we saw crossing the channel. There were ships of all descriptions from one horizon to the other. Ships that 2 years before had been blue prints carried men and equipment, especially trained and designed for the hazardous tasks that formed the pattern of invasion. Overhead thousands of planes provided protection while others sped ahead to bomb the German defenses.

Essentially, however, this was not an army, not a navy, but a nation sailing to war. Our ships were filled with the achievements and hopes of the American people. And allied with them, the desperate hopes of half a world suffering under German occupation.

For more than 2 years the full and limitless efforts of our Nation—and those of our allies—had been pointed to this day. Millions of American troops had been trained and equipped for this ordeal. Never in the long history of the world had so huge an accumulation of the world's talents, wealth, and effort—thought, ingenuity, and skill—been funneled into a single operation, never had an operation such meaning to the future of the world.

To launch this attack, to expand it, and support it, we were compelled to secure thousands of shiploads of troops, tens of thousands of carloads of ammunition, millions of tons of rations and special equipment. This equipment included thousands of ships and aircraft, acres of cannon, innumerable radios, hospitals, laundries, bakeries, machine shops, switchboards, bridges, sawmills, bulldozers, cranes, generators, freight car, and the enormous variety of items we carry to war.

I tell you this only to illustrate the enormous and complex character of war. As professional soldiers, you will remember that wars are won, not alone by the bravery of soldiers and by the quality of their leadership, but also by the mass of material provided by the Nation. And for this, I bring to the American people the thanks of our soldiers overseas—the thanks of their sons whose lives have been saved by the overwhelming superiority of our forces. Battles were won by the infantry, tank, artillery, and air teams—by soldiers living in the rain and huddling in the snow—but the war in Europe was won by the great strength of the Nation—soldier and civilian working together.

And so we see the advent of the machine has made war the total conflict that it is. Nations, not armies, go to war. In preparing yourself for a lifetime of service, you will not only train for the leadership of troops in battle, but also to provide leadership for the Nation in the event war should recur again.

With the ending of the war in Germany and the return to the United States of many veterans of Africa, Sicily, and Europe, there has been some apprehension on the difficulty with which these men shall readapt themselves to life in their communities.

Our Army today is a literal cross section of our national population, in better health for its years of service. True, some will return confused, bewildered, or embittered in their attempts to adjust themselves. But the overwhelming preponderance of these American men are returning more matured, greatly broadened, mentally sturdier, and more imaginative than when they went away.

For even in the cruel and wasteful destruction of war itself, some benefit has accrued to these men, not as a result of the war, but rather from the military training in which they have engaged.

The American soldier overseas has seen the great strength and ingenuity of his countrymen. They have taught him pride in the Nation and in the people of the Nation. This pride has been transfused to the American soldier himself.

Our soldier has developed confidence in his individual accomplishment. He has devel-

oped confidence in his ability to achieve great projects in company with other Americans like himself.

To the man who has reduced a concrete fort deep rooted in the Siegfried line, anything is possible. To the man who has built a bridge across the Rhine in 10 hours under artillery fire, there is no limit to his accomplishment. A man with the resiliency to stand off his enemy in the torturous cold of a winter battle does not frighten or discourage easily.

Military service has not submerged the dignity of the individual. Instead he has been trained to apply initiative and imagination—the greatest pair of weapons he carried into battle. And yet at the same time he has learned that individuals function best in teams. When our troops landed on the beaches they landed in boat teams. When they assaulted the Siegfried line, they attacked in assault teams.

This development of teamwork, their living together and working together has taught them consideration for each other, respect for the privileges of each other, and tolerance for the rights of others.

At the same time, our troops have accepted the fundamental characteristic of good citizenship. They have honestly acknowledged their responsibility to the Nation. They have discarded an earlier selfish attachment to extreme privacy. Their intense and absorbing interest in private effort has given way to greater concern for their public responsibilities.

In association with other men from all elements of society and from all sections of the country, our troops have responded to a desire for information, education, and further training in their vocations. Classification tests have assisted men in discovering hidden talents. Highly technical duties have stimulated the imagination of many and awakened their interests in a wide variety of scientific studies. The many more of them that continue on to university educations will do so with a sobering earnestness resulting from more matured judgment.

Finally these troops have known the people of many nations. They have viewed similarities between themselves and others and adjudged the differences. They are better informed on world affairs and will carry home opinions on our world relationships.

These, then, are the men you have been trained to lead. They have achieved standards that will be difficult for many of their companions at home to attain. As leaders of these men, you must not only attain, but even hope to excel those high standards.

As soldiers, your responsibility to the Nation in peacetime will be even greater than that in war.

For with the inevitable defeat of Japan and the ending of hostilities, the American people shall be faced with the need for redefining the role of our military forces in the life of our Nation—and in the conduct of its relationships with other nations of the world.

Our Government—and the governments of our allies—have indicated they will accept the principle of international cooperation among the nations of the world. In an earlier declaration of principle, our Government indicated that such cooperation shall be founded on liberty, equality, justice, morality, and law.

With the establishment of an international agency, it is probable that machinery will be prepared and empowered to use force, if necessary, to insure the preservation of peace. We, therefore, shall be charged by the people with the necessity of providing professional counsel and advice on the structure and employment of these defense forces.

By retaining the core of a professional force about which we can mobilize a great citizen army—perhaps systematically trained through some form of military service—we can establish the foundation stone of a system of national and international security.

As a part of this professional core, it will be necessary for you to give intelligent service to the Nation when called on for advice. You must fully understand not only the military nature of war, but also the enormous problems of its psychological, economic, and industrial characteristics. For these are the crucial factors of the war potential of our Nation, and that of other peaceful nations with whom we shall be working together in concert.

Naturally, our strongest guaranty of peace lies in a world order that will prevent the reestablishment and rearmament of those world powers that have been—and in the case of Japan, will be—shattered in defeat.

If the American people elect to insure the maintenance of peace in company with other nations, and if they elect to employ the use of military power to enforce their diplomacy we must stand ready to provide that power.

Historically, diplomatic conversations have been meaningful largely in proportion to the military and economic power available for their enforcement. In the years of crisis that preceded this war, even strong declarations of principle had little effect in deterring an aggressive Germany.

In closing, again let me impress upon you the seriousness of war. Modern war is a work war, a war of detailed planning, of specialized equipment, of long hours of drudgery, while still yet a war of courage and death. You will now take your place in this great citizen army of ours. In so doing you accept responsibilities that can be met only by loyal devotion to duty. You will become the guardian of the welfare and of the lives of your men. They will look to you for food, equipment, clothing, and shelter. They will expect you to share their problems and to advise them on personal matters. But above all they will expect to be led in such a manner as to bring military success with a minimum cost of life.

To this end you must know your men, your profession, your equipment, and you must exercise continual resourcefulness. Your first concern must be for your men. They will sleep willingly in the mud or eat a meager ration if they understand that you have exhausted every possibility for improving their conditions. And they will follow you into combat if you will lead them. By demonstrating ability, you will acquire their confidence.

A sense of duty and the will to succeed must go with you always. There can be no acceptance of failure. At the crossing of the Roer, when engineers were struggling under fire to hold an assault bridge in the flooded waters, a young second lieutenant was called on by his commander for a report of progress. He answered simply: "Sir, we've tried everything we know and we can't get the cable to hold. But we'll get it in somehow." With this spirit and resourcefulness he did. And an unknown number of lives were saved.

I cannot impress upon you too strongly the importance of your duties. I can only advise that you apply yourself diligently to build further upon the military foundation given you here and that by honest work and brave performance you maintain the fine traditions of the service.

The Academy has equipped you mentally, morally, physically, and professionally for the most important task anyone can assume. From now on you must develop yourself and increase your value to the Nation. Assume your duties in the knowledge that you are dealing with the lives of men and that nothing short of superlative effort can ever be tolerated. Our trust and the hopes of our Army go with you and will follow you always. In turn be grateful for this opportunity to serve your Nation. Be grateful to our people for the maintenance of this institution, and to this Academy for all that it has done for you.

May God give you strength to perform your duty, to live in honor and with devotion to your country.

Number Three Man

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Globe of May 21, 1945:

NUMBER THREE MAN

There was an exciting moment early in this century when it seemed as if John Hay was on the point of taking the oath as President of the United States. Theodore Roosevelt was President at the time. He was riding in a carriage on a public highway in western Massachusetts. Then a trolley car entered the picture, moving too fast. There was a crash. When Mr. Roosevelt emerged he was heard to say that it was a close call for John Hay. At the time, Mr. Hay was Secretary of State, having been continued in office by Mr. Roosevelt after he moved into the White House on the death of President McKinley.

The passing of President Franklin Roosevelt, elevating Vice President Truman to the executive chair, places Edward R. Stettinius next in line of succession. Certainly no one anticipates that our present Chief Executive will do other than complete his term of office; yet tragic events have brought sudden changes in the past.

This is not the first time in our history that finds the Nation without a Vice President. To be sure, such men as Johnson, Tyler, Theodore Roosevelt, and Coolidge, who succeeded to the post at the passing of their predecessors, lived out their terms. But simply because it has happened that a Vice President advanced to the highest position in the land has continued to breathe is not a good reason for assuming that a man in such a place will stay alive until the machinery of the law provides a successor.

Mr. Stettinius may turn out to be one of the ablest men ever to hold the office of Secretary of State. But he is entirely without the practical political experience obtained from running for office, being elected and administering public affairs from an executive position.

In our national life there have been three Presidents, all of them men of large ability in fields where they rose to eminence, for whom the Presidency was their first elective office. These were Ulysses S. Grant, William H. Taft, and Herbert Hoover.

General Grant was one of the finest generals in the history of warfare; Judge Taft had shone in the administration of the Philippines, and Mr. Hoover, eminent as an engineer, had a remarkable record in relief work. But the many admirers of these Presidents prefer to think of them outside the White House rather than in it. The same lack was common to them all. None had previous personal political experience.

That is good reason for being doubtful about Mr. Stettinius, should he be suddenly thrust into the White House. Yet the hope is general that he will shine as Secretary of State.

The Constitution provides that when the President is incapacitated his place shall be taken by the Vice President, and authorizes Congress to provide for the succession after a Vice President.

The present law, enacted by Congress in 1886, puts the Secretary of State in the No. 3 place, after the Vice President. The Secretary of the Treasury follows, with other Cabinet officers ranked in the order of the establishment of the departments.

Ex-Postmaster General James A. Farley has recently called attention to what he feels is the need of making some other arrangement. It is suggested that the Speaker of the House of Representatives would be better in the No. 3 position than the Secretary of State. The reason given is that a Speaker is elected by the popular branch of the national legislature, each of the Members having been themselves elected by their districts.

On the other hand, the Secretary of State is an appointee of the President. To be sure, the nomination has the approval of the Senate but that body is almost always prompt to permit a President to name his own Cabinet.

Looking back through the list of Speakers, it is evident that putting one of them into the White House would provide an Executive of thorough political experience.

This, however, is a problem that should not be settled in a hurry. Mr. Farley's suggestion that the matter be examined with care by a competent commission is sound.

UNCLE DUDLEY.

Race Tracks and Fairs—Why the Discrimination?

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. HOPE. Mr. Speaker, immediately after VE-day, the Office of War Mobilization and Reconversion announced that the ban imposed upon horse and dog racing had been removed and that hereafter operators of racetracks would be permitted to operate without any restrictions.

On the 1st day of June, the War Committee on Conventions, which is an agency set up by the Office of War Mobilization and Reconversion, issued a statement to the effect that no State or regional fairs were to be held this year. There is no way of reconciling these two orders unless we accept the theory that horse and dog racing, which are at least 95-percent gambling and perhaps 5-percent sport, are more essential to the war effort than are State and regional fairs, which are educational and constructive in their nature.

The excuse given for the order banning fairs is that it is necessary to save rail transportation for the movement of troops and supplies. This, in spite of the fact that race horses are being shipped all over the country by rail transportation and that very few people who attend State fairs use rail transportation.

I feel that our State and regional fairs have definitely contributed to the war effort. They have afforded an opportunity for the Army and Navy to bring the war directly to the people through the medium of war shows and exhibits. They have contributed to the sale of war bonds and have cooperated with the war food program. They have kept up the morale of the people in the agricultural sections of the country by furnishing both education and entertainment.

I am sure that no one wishes to see State and regional fairs conducted if they in any way interfere with the war effort. The burden of proof, however, is certainly on the Office of War Mobilization to show why it is permissible to operate race tracks all over the country while prohibiting fairs. If this ban on fairs is to stand, let us be consistent and let us close the race tracks also.

Postwar Employment

EXTENSION OF REMARKS

OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Baltimore Sun of June 5.

Mr. Speaker, there is much loose talk about an unworkable, un-American proposal to provide full unemployment after the war by Federal regulation and by the use of unlimited Federal funds.

We all want full employment, but we cannot have full employment by Federal legislation and at the same time retain freedom and the American way of life. We would have a Government as un-American as the German Gestapo, which we have just destroyed, if we try to pass such unsound, ridiculous legislation.

Because I think the editorial in question is unanswerable, I am pleased to include same:

IT IS TIME TO FACE UP TO THE IMPLICATIONS OF JOB GUARANTIES

In a public letter which may represent the position of the Truman administration, War Mobilization Director Fred M. Vinson has spoken favorably of the Murray-Wagner full-employment bill. Mr. Vinson's letter is very discreetly worded and is not quite clear just what he means by it. He says he wants guaranteed full employment, but he is against any regimentation of business or labor. Whatever the intent of his letter, many zealous people are going to believe that Mr. Vinson thinks Government can guarantee every man a job without impairing the normal American freedoms.

But this is moonshine, and for plain reasons. On this point, as on certain others, the British politicians have been a good deal clearer and a good deal more candid than our own people, Sir William Beveridge, for instance, who has devoted a life of close and scientific study to the subject, propagandizes for government guaranties of employment not in lyric speeches and cagily drafted letters of recommendation, but in solid full-length books replete with graphs and tables.

And in the course of these studies Sir William confesses what to him seems the obvious: That Government can't underwrite full employment unless it can assign men to the place in the economy where their services are needed to assure full employment; and that in so doing the Government will necessarily have to override what Sir William calls the "sovereignty" of private ownership.

Can any of the serious thinkers in Washington really be unaware of this commonplace truth? Take a single instance. The Navy Department is now crying out for 15,000 new mechanics to repair urgently needed navy ships in west coast shipyards. But the jobs so far have had few takers. There are workers available, all right. But for a variety of reasons (some of them, no doubt, quite good reasons) the workers aren't interested in the Navy jobs.

But does anybody think the Government is going to permit that Navy work to go undone? Suppose the Government were underwriting jobs in peacetime. Suppose it worked up a ship-repair program offering 15,000 jobs. Suppose the idle workers who were holding the Government to its job guaranty then decided they didn't like ship-repair work. Would the Government planners answer, "O. K., then, let's see if we can't work out something else—say, at shorter hours and more pay"? No one can really think the Government planners would prove so accommodating. The overwhelming pressure of their responsibility for the public's economic welfare would force them to pressure the unwilling workers into the ship jobs.

Critics of full-employment programs cannot, of course, deny that maximum employment must be achieved. Certainly they cannot be called callous about the great and justified yearning for steady jobs at good pay. But they can and should point out the implications of the programs offered. Even fair-minded advocates of those programs ought pretty soon to confess that sovereignty can't guarantee jobs without sovereign powers to fill them.

The Battleship "Iowa"

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. HOEVEN. Mr. Speaker, on February 22, 1943, it was my privilege to be present at the commissioning of the U. S. S. *Iowa* at the navy yard, New York. Since that time this 45,000-ton battleship has played an action-packed role in the war against Japan.

Under command of Capt.—now admiral—John L. McCrea, Marietta, Mich., the *Iowa* bombarded Kwajalein and Eniwetok in the Marshalls prior to their invasion early last year and pursued Japanese ships fleeing the February 1944 attack on Truk.

She participated in the invasion of Hollandia, April 1944, bombarded Palau, Ponape in the Carolines, and Saipan and Tinian in the Marianas.

The *Iowa* covered carrier operations against the Philippines and fought in the battle of Leyte Gulf last October.

When launched, the *Iowa* was the heaviest ship ever to go down the ways in American shipyards. She now has three sister battleships, the *New Jersey*, *Wisconsin*, and *Missouri*.

Capt. Allan R. McCann, Washington, D. C., succeeded McCrea as the skipper.

The *Iowa's* present skipper is Capt. James L. Holloway, Jr., Dallas, Tex., and Arlington, Va.

In 1943 the *Iowa* carried President Roosevelt to Africa for historic meetings with other Allied leaders.

The Adaptability for Postwar Service of United States Maritime Commission C Type and Victory Type Ships

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein a paper presented on April 27, 1945, by Vice Adm. Howard L. Vickery before the New York Metropolitan Section of the Society of Naval Architects and Marine Engineers at the Downtown Athletic Club in New York City, on the subject of the adaptability for postwar service of United States Maritime Commission C type and Victory type ships:

The subject set for me is the adaptability for postwar service of Maritime Commission C type and Victory type ships. I have assumed the right to add to these groups another type; namely, the P–2 or transport type.

When the Commission was originally organized there was considerable discussion as to the wisdom of designing standard types, it being held by many that in order to secure effective service a ship should be designed around the immediate requirements of the trade route in view, together with the policies of competing lines and the characteristics of vessels which the competitors had already placed or contemplated placing on the trade routes.

Inasmuch as there had not been constructed in this country any cargo-carrying vessels for a long period of time, excepting the two ships of the *Angelina* type constructed by the Bull Line for Puerto Rican service, it was necessary for the Maritime Commission to consider new cargo-carrying vessels generally rather than ships of special characteristics intended for particular trades.

It is provided in the legislation responsible for creating the Maritime Commission that the Commission shall design efficient vessels capable of rendering satisfactory service as auxiliaries in time of national emergency. When the designs were submitted to the Navy Department for its consideration prior to placing of contracts the contemplated speed received particular attention and by mutual agreement, 15 knots was accepted as meeting the minimum needs of the Nation. In only one class of vessel, namely, the C–1, did the Commission propose a speed lower than this, and, therefore, it accepted 14 knots although with reluctance because of economic justification.

In addition to the speed requirement, it was accepted as basic that the Commission-designed vessels should provide adequately for the working and living conditions of seagoing personnel. As a result of a careful study of working and living conditions in American vessels already in commission, there were developed standards involving the area of floor space, the location in the ship, the type of berthing, the food preparation and service, etc., which in recent years have combined to secure for the American seaman comforts at least equal to and in many respects superior to those enjoyed by the sea-going personnel of any other nation.

In all standard C-type and Victory ships crew accommodations are located in the midship structure and above the weather deck, doing away with the old forecastle and poop segregation. In general, no more than three persons are assigned to one stateroom and a separate stateroom is provided for each licensed officer. Separate messrooms are provided for crew, petty officers, and officers, each properly equipped with pantries, etc., and sufficient to heat the full complement at the same time. Sanitary facilities in excess of usual standards; proper lighting, heating, and ventilation; ample provisions for hospital ship's offices, and store spaces make the available accommodations entirely adequate.

In connection with this it is noted that concurrently with the construction program, the Maritime Commission has established fully equipped and up-to-date training schools which are placing in the merchant service young men who possess the desire, stamina, and technical skill necessary to man modern oceangoing vessels. These men are thoroughly trained in the operation and maintenance of C-type and Victory vessels; they are trained to seafaring as a profession and constitute the active nucleus that will carry the flag and commerce of this Nation to every port in the world. The Commission considers it highly important to insure for these men living conditions on shipboard that are satisfactory and compatible with the high standard of their profession.

Another basic concept uniformly carried out in C-type and Victory vessels and directly connected with the safety of crew and cargo is adequate subdivision that enables these vessels to sustain damage under reasonable conditions of extent and loading. The standard was adopted in compliance with provisions of the Merchant Marine Act of 1936 which directed that the Commission shall design the "best equipped, safest, and most suitable types of vessels. * * *" The reasons and considerations that led to the adoption of standards of subdivision in excess of those required by law have been set forth in a paper included in the Transactions of the Society of 1942. The effects of this policy on the characteristics of the Commission vessels are discussed in detail in that paper; the point that is made here is not one of policy in design but a statement of the fact that the general safety thus built into the vessels has contributed to establish these vessels among the finest in the world for their particular service.

The most careful consideration was given to the problem of propulsion. As you know, the power range of the standard C-type and the Victory-type ships lies between 4,000 and 8,500 horsepower. Electric drive for these vessels was investigated; however, the economics of the power ranges considered indicated that the loss in efficiency due to power transmission and the increase in weight of propulsion equipment did not justify adopting this type of propulsion.

Both diesel and steam were given the most careful consideration. In the diesel field contracts were placed for both direct drive machinery and for main units of higher revolutions operating through reduction gears with electric coupling. In general, it may be said that both types have rendered acceptable service.

For steam propulsion, in the power range considered, the Commission adopted a pressure of 450 pounds with total temperatures of 750°. All of these installations have been turbines with mechanical reduction gearing so designed to give a range of propeller revolutions per minute suited to high propeller efficiency. These installations are also characterized by their excellent results in service as to reliability and low fuel consumption.

The P2 type of transports previously referred to were the result of a design started by the Commission before the war for passenger vessels intended for intermediate services. During 1941, when investigation of the country's resources in ships for military use was completed, it became apparent that should we be forced to engage in warfare any distance from our shores there would be a serious deficiency in vessels available for transport duty. Therefore, the design work was pushed as rapidly as possible, so that at the time of the unexpected attack at Pearl Harbor the Commission was in a position to negotiate with prospective builders for immediate construction of this class of vessel, knowing that when wartime requirements ceased and postwar plans were initiated this tonnage would be valuable. The contracts were awarded in the middle of January 1942, and the first vessel of the class was delivered in July of 1943, which represents the shortest time for development and construction ever achieved in a vessel of this type and size. Contracts for building ships of this general type were placed with the Federal Shipbuilding Co. and with Bethlehem Steel for construction in the Alameda yard.

The P2 types are generally similar in dimensions; however, those now being converted to the R4 type of passenger ship by Federal are fitted with two C3 machinery installations, while those of the R3 type under construction on the west coast are also twin screw but with turboelectric drive.

The principal characteristics of the ships which we are considering are summarized below:

	C1A	C1B	C2	Victory		C3	P2–R3	P2–R4
				Type 1	Type 2			
L. B. P.....feet..	390	395	435	436–0	436–0	465	590	590
Draft.....do....	23. 5	27. 5	25. 75	28. 5	28. 5	28. 5	30	26. 6
Dead weight.....tons..	7, 271	9, 398	9, 036	10, 800	10, 700	12, 120	12, 350	9, 550
SHP.....	4, 000	4, 000	6, 000	6, 000	8, 500	8, 500	18, 000	17, 000
Designed speed.....knots..	14	14	15½	15½	17	16½	19½	19½
Number of passengers.....							550	550
Bale capacity.....	448, 995	447, 748	560, 000	453, 210	453, 210	730, 000	332, 000	364, 000

The figures given are for vessels equipped with geared turbines except for the R–3 type which, as previously stated, is turboelectric.

The construction of the standard types has been restricted in general to independent building yards which have provided their own facilities but were expanded by the assistance of the Commission to meet the production requirements of the war. The exception to this is the North Carolina yard which is Commission-owned but operated by a subsidiary of the Newport News Shipbuilding & Drydock Co. These yards which have so nobly carried on prewar standards of construction with wartime production requirements are Bethlehem, the Alameda and Sparrows Point yards, Consolidated Steel Co., Federal Shipbuilding & Drydock Co., Gulf Shipbuilding Corp., Ingalls Shipbuilding Corp., Moore Dry Dock Co., Pennsylvania Shipyards, Inc., The Pusey & Jones Corp., and

Western Pipe and Steel Corp., as well as the North Carolina yard.

The Victory ships are to be credited to the so-called production yards which accepted the monumental task of constructing long range types with organizations and equipment set for the assembly of the far simpler Liberty ships. The Kaiser yards at Oregon, Richmond, and Vancouver, the Bethlehem Fairfield yard, and Calship are the ones who have done this task.

Previously listed are the salient features of the standard "C" types of ships which it is now proposed to discuss in some detail and from the standpoint of their adaptability for specific purposes in world postwar trade. Obviously, there can be no material changes in the main propulsive units. It is equally obvious that the hull structure in its main characteristics cannot be changed. However, evidenced by the requests of many operators almost everything else about the ship can be and has been changed. The types are discussed according to their size and tonnage.

There are two types of C1, namely, the C1A and C1B. The C1A was the earlier design and, like the C2 vessels, were designed as shelter deckers. Before placing contracts, the Commission received comments from many operators who felt that it would be desirable to have a vessel of this size and speed, however, for use in the deadweight trades. There was sufficient interest shown in a vessel of this type so that C1B was designed as a full scantling vessel. Both types have seen considerable service and proven satisfactory for the trades for which each was suitable. Fewer changes have been introduced in these than in other types, primarily because of the restrictions imposed on conversion, due to their smaller size as well as the lack of flexibility in operation, because of the slower speeds than the other standard types.

The C2 types and Victory ships of the AP2 type may be considered as the second family, as they have many characteristics in common. The speeds are approximately the same. The C2's possess a somewhat large bale capacity, as may be noted in the tabulation. Thus, the C2 is adaptable to general cargo trades, particularly package freight, whereas the Victory ship could be considered better suited to routes where deadweight or bulk cargoes are to be found.

The AP3 type of Victory ship is powered with 8,500-horsepower geared turbines, which became available at about the time this design was under way. It was possible to make slight compromises and use the same hull for both the AP2 and AP3 types, with excellent performance for this range of powers, despite the resultant variation in speed. This vessel can well be utilized in deadweight trades where speeds are important, especially those involving voyages of a considerable length. Although there are not as many AP3 vessels available as the slower AP2's, as a considerable number have been converted for the Navy's use as combat transports, it is possible that some of these may be returned to the Commission for reconversion for postwar use. It may be stated here that many of the standard types are in a similar category, that is, after the need of the military has been accomplished they may become available for reconversion under somewhat favorable conditions from a standpoint of general financial outlay.

As previously mentioned, some C–2 vessels were constructed by North Carolina. These C–2's differ from a standard C–2 in that they have been constructed as full scantling vessels with a dead weight of 10,800 tons. The standards of subdivision have been retained by eliminating the shelter-deck features and may be considered as competitors to the AP–2 Victory ships which possess similar dead weight and a somewhat lesser cubic. There is definite advantage, however, in this North Carolina C–2 that should the owner, after purchase, desire to reduce the tonnage and the dead weight, it is possible to install tonnage openings and the tonnage well with a minimum of change to regain the characteristics of the original C–2 design. This feature has been appreciated by many operators and consequently many of these vessels have been allocated for conversions which will be hereinafter discussed in further detail.

The C–3 vessels of the Commission's program are perhaps best known and it is believed that they have been adapted to more uses than perhaps any other vessel ever constructed. Outstanding in these conversions are the following types: Escort aircraft carriers, destroyer tenders, seaplane tenders, passenger and cargo vessels of four types, attack transports for the Navy, troop transports for the Army, besides multitudinous minor modifications made prewar to suit the requirements of various operators on standard trade routes. Although designed as a 16½-knot vessel, these ships have been scheduled regularly at 17 or 17½ knots and have proven capable of maintaining this speed, and there are records wherein on certain routes an over-all speed of 18 knots has been attained where such a voyage has been favored somewhat by favorable winds and currents.

In order to give a more specific picture as to what can be done, particularly with the C–2 and C–3 types of vessels, I will outline certain conversions which have been made or are in the current construction program in order to permit a more general evaluation of the flexibilities and capabilities of these designs. No attempt will be made to detail the particular vessel of the design or building yard involved, but rather the operator desiring the changes and the over-all characteristics thereby attained.

GRACE LINES, C–2

Two sets of vessels of the North Carolina type have been converted for the Grace Lines; the first series of changes included additional cargo-handling gear which provided double ganging of all the cargo hatches and a change in the boom capacity for the midship hatches from 5 to 10 tons. Also about 100,000 cubic feet of refrigeration especially adapted to the carrying of bananas was added in Nos. 2 and 4 upper and lower 'tween decks to care for this commodity which is a principal item of trade. This resulted in a remaining bale cubic for dry cargo of 400,000 cubic feet and an available dead-weight of 10,350 tons.

The second phase of this conversion is in prospect wherein accommodations for approximately 52 passengers have been added. This was accomplished by completely modifying the superstructures above the main deck in order to provide for the necessary staterooms, an adequate dining room, lounge, and cocktail room, as well as a small open-air swimming pool. This addition, of course, resulted in a further reduction in dead weight so that approximately 10,000 tons will be available with the cargo capacity similar to the previous conversion mentioned.

UNITED STATES LINES, C–2

The changes for United States Lines, also North Carolina built, have not been as extensive as those for the Grace Lines in that refrigeration is primarily for frozen produce and limited to Nos. 3 and 4 upper 'tween decks. In No. 4 hold additional deep tanks have been provided by the installation of a new flat slightly above the shaft at level to provide approximately 800 tons of cargo oil and additional fuel oil to obtain the necessary cruising radius. In this connection the deep tanks in No. 2 hold have been eliminated as ballast voyages are not expected in normal operation. The resultant bale cubic is approximately 426,000 cubic feet for dry cargo and about 37,000 cubic feet of refrigerated; the dead weight is about 10,400.

C–2'S, GENERAL

In addition to the above specific changes, many of the earlier C–2's were modified slightly in their cargo handling rig, and most of them assigned for operation to regular trade routes had refrigeration added generally in accordance with the changes noted for the lines above.

In order to warn the more ambitious it is desired to point out that the additions of passengers to the C–2 type of vessel have to be considered with extreme care and caution. The addition of superstructures has a pronounced effect on the center of gravity and such modifications may lead to the necessity of reducing the dead weight by the installation of fixed ballast in a quantity necessary to maintain satisfactory operating conditions.

C–3 CONVERSIONS

Many of these, of course, have been for the Army or Navy which have no bearing on the subject in hand, that is, postwar utilization of tonnage. I will review the prewar conversions and those presently contemplated to show the scope of long-range planning that has been covered.

AMERICAN PRESIDENT LINES, C–3

Certain C–3 vessels were modified for the round-the-world trade to replace vessels then being utilized which were of the First World War construction program. The changes, in general, were to provide for the carrying of about 96 passengers, maximum with the addition of refrigeration and cargo oil tanks to meet the necessity of this trade. The design changes were planned by the office of George G. Sharp, and, while the war intervened so that not all of these vessels could be placed in service, sufficient operating experience was gained to indicate that they would have been successful.

In more detail the passenger accommodations consisted of 38 staterooms, together with a pleasing lounge and spacious foyer serving as a smoking room and cocktail bar. A swimming pool was also incorporated, together with a dining room capable of seating the maximum complement.

All the passenger quarters received adequate ventilation. Air conditioning was provided for the inboard rooms, public spaces, and dining room. The refrigerated cargo was approximately 43,000 cubic feet and special provisions were made for liquid cargoes in No. 4 hold whereby structural interferences within the tanks were eliminated, thereby minimizing the problem of cleaning. The result in bale capacity for dry cargo was approximately 435,000 cubic feet.

AMERICAN SOUTH AFRICAN LINE, C–3

In order to provide a regular passenger service with a schedule capable of competing with foreign services to South Africa, the Commission arranged to convert three C–3 vessels for the American South African Line. In very general terms the changes were similar to those outlined for the American President Lines previously, but the passenger capacity was increased to about 116 and the public rooms enlarged somewhat beyond those installed on the previous conversion.

The dining room was increased in size to provide seating for 128 and a large smoking room as well as lounge were installed together with a small bar and sitting room. The amount of refrigeration was increased to approximately 57,000 cubic feet resulting in reducing the dry cargo capacity to about 420,000 cubic feet. The resultant dead weight was about 9,900 tons and showed a very good balance with the other characteristics.

UNITED STATES LINES, C–3

Just previous to the start of the war in Europe in 1939, arrangements were made to convert 4 vessels of the C–3 design for use on a London service. This conversation contemplated 165 passengers, considerably more

than the previous conversions, with a resultant increase in the amount of space allocated to public rooms and other features. Again refrigeration was installed to the extent of about 53,000 cubic feet, the dry-cargo capacity was about 537,000 cubic feet, and a satisfactory dead weight of 8,200 tons was expected. However, before completion of the first vessel, this country entered the war, and immediate conversions for military purposes was commenced, so that final checking of the above figures was not possible.

MOORE-M'CORMACK, C–3

These vessels were another prewar conversion similar to the United States Lines above, in that they, too, were never finished but were converted for naval use as escort carriers. This design was the most extensive conversion contemplated for a C–3 vessel in the prewar period. It is felt that in this case an endeavor was made to secure more in several directions than the dimensions of the ship justified.

The total passenger complement finally provided for was about 216, with the passenger facilities increased in that proportion as compared to the 3 conversions just mentioned.

Due to the extensive addition of superstructures, this marked the first attempt of the Commission to introduce light materials such as aluminum for structural work as well as such equipment as lifeboats and davits. Also novel in the design was the proposal to use compartments which in essence are extremely small staterooms designed primarily for single occupancy but with an upper berth should minimum accommodation for 2 persons be desired. It is felt that this type of stateroom with a private toilet and bath will have considerable postwar merit, as it permits the average individual to travel at a minimum rate and still enjoy the luxury of private accommodations. The staterooms contemplated were about 6 by 12 feet, with the bathroom included.

MISSISSIPPI SHIPPING CO., C–3

There is at present contemplated a conversion of the C–3 type for the Mississippi Shipping Co. Rather than go into detail and repeat the above, it is sufficient to say that passenger carrying characteristics are being introduced and as the design is in the hands of our friend George C. Sharp, we may expect many novel and interesting features when inspection is made upon delivery.

CARGO VESSELS, C–3

The variations in the design of the C–3 cargo vessels are too many to outline in detail. It is sufficient to say that most of the adaptations involve the addition of refrigeration, modification in cargo-handling gear to suit the requirements of the various trade routes, alterations in structure to permit deep tanks of various types, and in the case of the new vessels for the American South African Line modifications in the hatch sizes and cargo gear to meet their special requirements.

I am sure that these comments indicate the extremes in flexibility which may be obtained from a general design, which has a basic sustained speed of 16½ knots and an initial cubic capacity of 730,000 cubic feet and a dead weight of 12,100 tons.

As further statistics would be equally boring let us jump to more glamorous subjects and I will discuss briefly the plans for our first postwar passenger vessels, the conversion of the P–2 transports previously mentioned.

UNITED STATES LINES, P–2

This design bears the designation P–2, S–2, R–4 and is a conversion of those vessels being built at Federal Shipbuilding & Dry Dock Co., whose general characteristics have been tabulated previously. These vessels will probably represent the initial American provision for trans-Atlantic passenger travel by ship as soon as this route is declared safe for such operation.

Two types of accommodations are provided—cabin class and tourist class—and the vessels are scheduled to operate on a 28-day turn-around with 7 days to England and 8 days to the first continental European port. In developing this design the Commission has had the full support of the United States Lines, and jointly we expect to offer new standards in appearance, accommodations, and decoration. The vessels will be thoroughly modern, both externally and internally, and in full keeping with American standards of living that we have endeavored so hard to achieve.

I might state also that this standard of accommodation is not only confined to the passengers but extends to the crew as well as the officers. I trust that all present may have the time and opportunity to inspect these first vessels, which reflect in some measure our postwar desires, and it will be a pleasure to receive your comments after such inspection as to whether, in your opinion, we have achieved the ends we have desired to obtain.

As noted, accommodations for about 550 passengers have been provided. These are divided, roughly, into 350 in the cabin class and 200 in the tourist class. Each class is provided with two large public rooms, consisting of a smoking room and a lounge, or, more properly, social hall. We have departed from the former practice of providing a spacious main lounge as it is the result of many observations and the consensus of opinion that the utilization of this space on older vessels was limited to elderly people and movies. In lieu thereof we have provided a theater accessible to both classes, which has many advantages. Some of these are:

1. It obviates the necessity of tying up one public room in either class for this function and eliminates the interruption of those enjoying the pictures by those passing through the space for other purposes.

2. It permits practically full time utilization of a public space as it is expected the use of this theater will be devoted to the tourist class in the day and the cabin class in the evening.

3. By its very nature it is possible to place this room in the center of the vessel occupying space which would normally be given to inside staterooms, which in themselves are not wholly desirable.

It is felt to be desirable to call attention to one other feature, namely that of air conditioning. In addition to providing what we feel to be an outstanding installation, the extent of air conditioning has been greatly increased so that it not only covers the dining rooms and inside passenger public spaces, such as a theater and staterooms, but also extends to all staterooms occupied by passengers as well as the mess rooms for officers and crew.

Cargo handling has received careful consideration as in order to maintain the schedule, efficiency for port loading and discharge must be obtained. It is not proposed to discuss the novel features introduced at this time but details of the vessel as a whole will be made the subject of future publicity when the same have been completed.

AMERICAN PRESIDENT LINES, P–2

These vessels are being constructed by the Alameda yard of the Bethlehem Steel Co. and as previously mentioned they were designed with turbo-electric drive. These vessels have identical dimensions with the U. S. Lines P–2's, except that from the beginning it was apparent that the trade routes operated by the various lines of this country fall into distinct classes as to required cruising radius and consequent oil tankage. Therefore, these vessels have considerably more tankage and radius of operation than those on the east coast.

Inasmuch as there is a distinct difference in the services of the two lines involved, the conversions have been made in such a manner as to suit the particular trade requirements. This vessel carries three classes of passengers with a good proportion of the third class having open berthing as has been customary for the trans-Pacific run. Again for economy, certain features have been made interchangeable, particularly between the tourist and first-class accommodations and as an incentive to tourist trade, a swimming pool has been provided for this class as well as the first-class passengers.

For the third class, a change in the standard practice for dining will be tried. This will consist of the introduction of a form of cafeteria system whereby vegetables and meats are served free of charge from a cafeteria counter at the request of the individual. By this scheme it is felt that it will be possible to give a greater variey of food without a material increase in the cost of serving the same, due to certain economies which may be obtained with cafeteria type of service.

It is desired to call attention to a rather interesting trend in the minds of the operators regarding both the above passenger vessel conversions. During the planning stage of the designs it was felt that on vessels of this type passenger requirements should be subordinated to those of cargo and its associated handling and consequently the early studies were limited to between 300 and 400 passengers in one or two classes. This was felt to be relatively sound because the scope of the war was not known and the prospect of airplane competition indicated the possibilities of that form of transportation making severe inroads on the passenger traffic normally carried by water-borne carriers. However, when these conversions were discussed with the prospective operators, every attempt was made to build up the passenger complement on all decks available for berthing the same. Decrease in cargo carrying was accepted, the idea in mind was that in all cases the cargo requirements of the trade would be met by the addition of the Commission's long-range cargo vessels in such a number so as to meet the tonnage requirements.

This feeling in the minds of operators is distinctly encouraging to the outlook of postwar passenger vessel construction. In general, the feeling exists that there will be a considerable amount of passenger travel immediately after the cessation of hostility and the sea lanes are open for commercial operation. Obviously the air lines cannot absorb all such requirements for transportation without adequate equipment immediately available, and furthermore, there still will exist a considerable number of persons who prefer to travel in the atmosphere of restfulness and comfort provided by the surface vessel. These travelers will form the nucleus upon which postwar future business will be based. Therefore we have endeavored to modernize and streamline our accommodations in service in strict accordance with the high standards the American public have set for themselves. Every effort has been made in planning to give service which will be second to none and plans are already being formulated for the training of personnel to accomplish this end.

I have outlined briefly the flexibility of standard designs, but I wish to make the point that these should not be construed as being all the variations that may be obtained. The Commission holds no brief for originality and, in fact, many of the conversions of the designs were the work of independent yards or carried out upon the initiative of the various shipping companies for which they were constructed. The basic

thought is, given a properly designed hull, from a subdivision and structural point of view with efficient and modern machinery, multitudinous possibilities exist to shift the available characteristics to obtain balance in cargo requirements, passenger requirements, cruising radii, and provisions for special commodities in special trades, so that it may be well for all to consider what can be done with standard designs to obtain the over-all economies which come with group production.

As noted in the preceding paragraph, much credit is due the industry as a whole. I desire to express our indebtedness to the private design agents, to the shipbuilders and their staffs, and to the operators for their wise counsel, untiring effort, and wholehearted cooperation which have made this program possible. Also, credit is given to the seamen, to the officers, and those who man our merchant fleets, as their expressions have assisted us in providing those features which will in the long run make efficiency of service, proper handling at sea, and quickness of turn-around possible. It is only by such means that this country can establish a peacetime merchant marine that will survive.

Opportunity and Responsibility of Youth in the Postwar World

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. McKELLAR. Mr. President, on June 4, 1945, the Honorable Breckinridge Long delivered an address entitled "Opportunity and Responsibility of Youth in the Postwar World," at the commencement exercises of Lincoln Memorial University, at Harrogate, Tenn. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this peaceful setting it is hard to realize that the world is passing through the greatest crisis in its history. Though the sounds of another battle once echoed among these hills, the din of this great struggle does not penetrate their seclusion. The cries of suffering do not reach us here. Nor can the devastation of whole countries nor the signs of desolation of their populations be seen from its highest peak.

While we may be removed from actual contact with the belligerent activities of this greatest of conflicts, we must be conscious of those developments in the world outside and must appreciate that conditions have been created which will have profound influence on our future lives. We may thank God that we and our homes have been protected from the widespread destruction and may find some solace in the thought that we have been spared the suffering of physical injury, but we may not deny the fact that demolition has been so widespread that the effects of it will have a profound influence on our own future. Nor can we escape responsibility for charting our course so that our social establishments and cultural institutions shall survive the effects of great disaster.

Except the Americas, every continent has been the scene of battle. Little islands protruding above the level of the seven seas have been raked with bursting shell and made wet with blood.

Our own involvement in this was the result of a plan executed by the partners in crime which had each previously attacked other peaceful countries one by one, overcoming smaller nations by the magnitude and violence of their assault. As the area of warfare spread, Africa, Europe, Asia, the islands of the seas and the waters which lave their shores were all either subjected to the predatory might of the offending nations or were used as bases for launching an attack. And so extensive was the resulting turmoil that nowhere on this broad planet—not even in a mountain fastness—could man move in the course of his normal activities without coming in contact with one repercussion or another of the state of war.

The nations which instituted this mad orgy determined to overthrow the systems through the orderly operation of which free peoples establish their rights to liberty and maintain the enjoyment of those rights. They deemed these peoples weak and held them in contempt. They felt that these democratic nations would constitute no serious obstacle to the complete realization of selfish ambitions for world domination.

Whole populations were deprived of the rights of human beings. Millions were uprooted and transported by the Nazi armies to work as slaves to produce the weapons by which their fellows would be destroyed. Those who demurred were persecuted with fiendish cruelty. At the same time Japanese sadists maltreated helpless civilians, subjected them to merciless torture by confinement and starvation and even beheaded those courageous men who had the temerity to carry a righteous war to their homeland and be so unfortunate as to be captured alive.

As each nation fell before the gigantic war machines it became harbinger for its neighbors of impending fate. The remaining peaceful nations, aghast at their own prospect, shuddered at the sight of demolished cities, devastated homes, wrecked and destroyed lives—at populations driven in bondage, at the threat to civilization itself.

When we ourselves were eventually attacked we assumed the leadership of those not yet embroiled and of those brave peoples still resisting oppression. We decided to make common cause with them against the enemies of mankind. We opposed the greatest and most widespread force history had ever seen and to overcome it organized, with the help of our allies, a greater and more destructive power as the only means of preserving our liberties and ridding the world of the evil agents of destruction. This power has been applied in specific forms of force and fortunately has brought to our righteous cause success in Europe where the leading malefactors have paid with their lives only too cheap a price for the havoc they wrought and where the symbolic capital of vindictive violence lies as rubble.

While victory for human rights is triumphantly proclaimed in one sector the remaining culprits in the Far East are still so strongly entrenched it is necesary to continue the supreme effort until the arrival of that happy day when we can welcome home those brave men who justify our faith and fight so valiantly the battle to preserve our liberties.

We have been protected from the physical impact of all this—even from its sights and sounds. But the invisible influences of disintegration which result from it are omnipresent and unless eradicated will eat like a cancer into the vitals of our civilization.

It would be a happy state if the destructive effects of this war would end with its final shot. Such, however, is not to be the case. When so many millions of the human race have suffered bodily and mental pangs, when desolation, persecution, and hunger have been visited upon so great a number, there exists among them a low state of morale which in some degree will linger as an aftermath and will continue as a cause of further degradation to those unfortunates and constitute a potential menace to the rest of humanity as long as the conditions which cause it remain. And when to protracted suffering and disease is added physical destruction of cities and farms, of roadways and bridges, of mines and factories, we must realize that any return to a normal state is somewhere in the future and will be in the future still when the last instigators of the treachery at Pearl Harbor are no longer a challenge to democracy.

Those conditions make for a chaotic world and if order is to be brought out of a chaotic world, it must be accomplished by patient effort well sustained to revive industries in those stricken countries and by the intelligent cooperation of all nations in maintaining international order.

A similar situation, but on a much smaller scale, existed at the close of that other great war. It is true that a generation ago there was proposed and formed an organization for the purpose of maintaining order in the world. But it is also true that some great and powerful governments either abstained from joining it or subsequently withdrew and that those factors together with certain inadequacies in its underlying instrument of authority contributed to the failure in preventing the initial steps of the predatory governments which brought on the present conflict. It permitted us to enjoy a few years of peace, but the security they witnessed was ephemeral and evanescent, though that instrumentality could have been used for the continuing conservation of our welfare.

In this wonderful land of curs with its abundance of spiritual and physical resources we have been apt in the past to assume an attitude of happy complacency about affairs abroad, especially when they were far away.

But we realize now that the trouble in the Far East which engaged us at Pearl Harbor had its origin years before in an open aggression on China, gradually to spread from one adjacent area to another; that the trouble in Europe which involved us at the same time started earlier with a vicious attack by Italy upon a defenseless nation in Africa; and that indifferent treatment of those two incidents emboldened Germany to institute her own lawless campaigns, and finally made allies of those three aggressor nations which it has taken a terrific toll of the world's resources to oppose successfully.

These hard experiences taught us that complacency about far-away events and indifferent attitudes toward the rights of individual nations—even if small and far-removed—are elements of a dangerous foreign policy.

If we have learned anything in those years which measure the maturity and wisdom of a generation it is that it is necessary to join with other nations to maintain order in the world.

We found it necessary to cooperate with other nations to win the war. We now find it necessary to cooperate with other nations to win the peace—and to keep it won.

We must also be conscious that in those very extensive areas of the world which are still the scenes where destruction is an accomplished fact and where misery and hunger stalk amidst its ruins actual conditions exist which are not good incubators of peace. We must realize now that our cooperation in the reconstruction of those places and rehabilitation of those peoples is not only an urge to fulfill a humanitarian desire but the only safe way to insure the enjoyment of our own rights which Jefferson succinctly phrased as "life, liberty, and the pursuit of happiness." We must now understand that our only safe course is to cooperate not only

to suppress war but, in order to make insurance doubly sure, to eliminate the causes of war.

That leadership which we assumed in the affairs of the world while it was in the process of destruction is not to be thrown lightly aside when the victory is won but is to be used as a continuing influence to support a system of law and order for all time and to effect the cure of conditions which might lead to war.

Our leadership also places upon us a responsibility to readjust our own internal affairs from a war basis to a peace basis as the demand for military supplies diminishes to an extent which will permit the resumption of normal activities. The revival of civilian domestic consumption, the reestablishment of international trade, the reinforcement of our personal liberties with due regard to our neighbors' rights, the reestablishment and maintenance of international peace—these all call for a rededication of our energies to reconstruction on an enormous scale at home and in cooperation with other nations abroad.

When the fighting is brought to a final and victorious close our happy people will take adequate steps to secure their own welfare and to collaborate with other peoples so that this scourge of destruction shall not again be allowed to descend upon our children.

Through our efforts at home we shall reaffirm our faith in our political system, establish our economic life on secure bases, and through the medium of international cooperation arrange that trade will flow in increasing volume in an era of peace.

Recovery will be the watchword—recovery of the spirits of despairing humans, recovery of sick and emaciated millions, recovery of governments from disintegrating influences, recovery of the ordinary business of ordinary men, recovery of factories and farms and lines of transportation, recovery of economic and industrial activity in a world of fair dealing and friendly cooperation.

Thus it develops recovery becomes our goal and its achievement becomes our duty. It does not often occur on a large scale that a duty is so distinctly recognized and of such universal importance that people generally are conscious of it and expectant that it will be discharged. Nor does it often happen in the passage of time that a generation comes to maturity with a definite task confronting it and the world expecting it to perform that task.

However, that is the situation that confronts you and those like you who step forth from institutions of learning where your minds have been stored with knowledge to prepare you for active participation and eventual leadership in the affairs of mankind. You will be joined by those others of your generation who are for the time being in the armed forces, receiving their education in a different school, but who will return to be with you in the work ahead.

There falls on your shoulders a definite responsibility but with it also opens a great opportunity. You find the world distraught by war and its aftermath. You can lead it into peace and a realm of reestablished order.

We of the older generation, while we have not carried the torch of war, have struggled through many of our mature years in actually resisting aggressions which culminated in war and on two awful occasions in waging war to suppress war. When this agony reaches its end our thoughts will yearn for peace and our nascent hope will be accompanied by a delightful sense of satisfaction in the thoughts that we will have preserved the institutions which permit us to enjoy our liberties and that we will relinquish responsibilities for the recovery of the world from its present ills to the shoulders of youth—and we will do so with an expectant confidence for the future.

It will be for you of the younger generation to carry the torch of peace and to bring about the recovery. The will for the one and the desire for the other will be insufficient to attain either. In addition there must be an actual leadership exerted through intelligent effort to a practical end.

The opportunity to serve is enhanced by the developments of science now at hand and constantly developing. It is as if the world had grown smaller for we are able to make contacts with distant places with a miraculous celerity. The mysterious influences of electricity have annihilated time for the purpose of exchanging intelligence and the explosive phenomenon of gas and chemicals has reduced space to a minimum for purposes of physical transport. Those media can be used to amalgamate the understandings and to coordinate the activities of peoples everywhere so they can live in the confidence of a justified hope that their homes and lands are safe from depredation and that they may follow the normal course of their way of life. Conversely these same agencies of communication and transport can be used to scatter discord, to arouse suspicion and hatred, and to engender strife and disorder.

But science which has pried from nature the secrets of these phenomena can point the way to guard humanity from such use of them as will contribute to another bath of blood. There must be some way to protect civilization from the distorted use of the very ingenuities which have sprung as illegitimate offshoots from the parent stem, intent on destroying the very system which gave them birth. There is some way to organize the forces of peace and order so they will be stronger and more alert than the forces of violence. There is some way in which the great majority of peacefully inclined people can shape their destinies and continue their daily existences without fear of molestation at the hands of congenital fratricides or maniacal saboteurs.

A formula is being developed and an organization will be set up through which the cooperation of other governments can be secured to prevent the unauthorized or lawless use of force. Based on justice, granted power sufficient to prevent wars, equipped to neutralize situations which engender war, it will need only the support of governments and their peoples to lead it to a state of effective operation and to direct it to serve the high purpose for which it is intended. Some of its provisions may not receive the entire approval of various individuals. We cannot expect complete agreement on every detail to be accorded the product of any human endeavor. But objection by some person to one detail and by others to another ought not be magnified out of their true proportions nor allowed to prevent the consummation of a deep and yearning desire on the part of mankind as a whole to put into effective operation a plan to prevent, if possible to do so, willful men from using the forces of destruction again to plunge the world into a cataclysm of fury.

With millions dead and countless thousands crippled and infirm, with untold numbers decripit and hastened to a premature age by the stress and strain of conflict, with morale shattered, faith endangered, and civilization itself imperiled, our duty is to take immediate steps to stop the disintegration and to establish some system of international order to prevent further damage to our lives and liberties. That it may by some be considered imperfect is of less consequence than would be failure to agree upon an instrumentality to serve the immediate common need. Time, experience, and a little patience will permit readjustments in a less pressing period, but the crying needs of the moment are to complete the defeat of our remaining enemy, to reestablish international order and to readjust our home economy as soon as the consequences of war permit.

While steps to meet these needs must be taken in the present, their development and ultimate realization will be the work of the future. The hand of present-day youth will guide the plans to their full fruition. Responsibility for their development will be relinquished gradually to younger hands and with that charge will go a great opportunity for service. In our imaginative and wishful moods we have been wont to envy those in ages past who marched with Alexander the Great, who followed Ceasar in Gaul, who rode the steppes of Asia with Genghis Khan, who were with Napoleon in the days of his military triumphs. In these last few years the magnitude of our own armies and the enormity of their battlefields bring us to the realization that we are seeing Alexander, and Caesar, and Genghis Khan, and Napoleon all rolled into one.

Of less glamor but of more importance were the effects of those historic movements upon the lives and times of those who followed in their wakes. Each of them had its effect upon the course of history. And each of them afforded an opportunity to build a better system of life upon the ruins which they left behind. Great upheavals destroy but they also leave an opportunity to reconstruct on better bases, to carry to higher pinnacles the aspirations of man and to bring closer the realization of an improved state of society in which his rights and the enjoyment of his liberties may be more surely advanced.

As the damage to the world of our day is more widespread and in some respects more profound than was that caused by all those movements in ages past, so the present opportunity is greater to build on more solid foundations and to bring a fuller measure of security to mankind.

Truly we are passing through an experience of enormous import to ourselves and to all posterity. We have not recovered from the physical impact nor do we yet appreciate the full effects of the concussion upon the ethical and cultural organizations of our society. Some of the damage resulting can be discerned by the eye but the effect upon the institutions man had set up to cater to his spiritual, social, and political welfares are not so readily perceived.

We are still in the vortex of the maelstrom and from here must find a way out of it to a future which will witness the reconstitution of an orderly society, which will secure man's liberties, bring satisfactory solutions to his social and economic needs and prevent the possible peradventure of a repetition of the present tragedy. From here roads lead in different directions and it depends on which we take whether we go where we want to be. Roads lead to a future of good, to one of bad, to one of indifference, and to one of decay.

We seek the high road to peace, the road which leads to the most good for the greatest number, the road which will carry us to the place where justice will be supreme and where honest nations, like honest men and women, will make their contribution to an orderly and decent society with fairness for all.

The atmosphere along this road will be surcharged with the dynamics of old emotions and new ideas. It will be for youth to direct us along this highway, to rebuild, to reconstruct. There is no panacea. There is not even a precedent. Ahead of them lies a work of great responsibility. To prevent the disintegration of world civilization and to reconstitute the impaired institutions which man has used to serve his nobler purposes presents a solemn problem but one which beckons to the vigor and imaginative instincts of youth. It is the greatest opportunity for constructive leadership any generation ever inherited.

Never before have men and women been given an experience at home and on far-flung

battlefields which could be used for such lasting benefit for all mankind; nor ever before has youth been confronted with an opportunity to build on such stupendous scale—to re-create cities, to reconstitute nations, to increase peacetime productions, to stimulate world-wide commerce, to conserve international peace, and to bring a war-worn but determined and undiscouraged people to a happy realization of a revived and fortified civilization. That is the unfinished work—the task ahead of youth.

And as we look upon the maturing generation and view the future we are confident that again will be answered the call of Abraham Lincoln:

"It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is for us here to be dedicated to the great task remaining before us * * *."

Livestock in the Postwar Picture

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Prof. Marvel L. Baker, of the University of Nebraska, on the subject Livestock the Mainstay in the Postwar Farm Picture. I make this request because I think the material contained in the address will be of particular interest at this time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We hear a lot of discussion concerning plans of industry and business for the immediate postwar years. Any realistic plans for business and industry, especially in Nebraska, necessarily must consider the position of agriculture. Frequently its importance is forgotten or overlooked; sometimes it is misunderstood; or again it may be attacked as a selfish interest by representatives of some other group or industry which may itself be labeled selfish with at least equal accuracy.

Some time ago I was impressed by a statement by one of our members that in his business, they did not like the term "postwar planning" because that term was too definite in its meaning; they preferred the term "postwar preparedness."

As far as agriculture is concerned this certainly is the preferable term. Agriculture does not know what obligations to the rest of the world we shall assume; nor what our trade policies are to be; nor what our national debt, our tax policies, or our general price level may be; it does not know what Government policies toward agriculture are to be. In short, there are many important factors which will affect agriculture in the postwar world about which agriculture is now uninformed. To talk of planning under such conditions lacks realism.

Anything which can be done to give business, industry, and the general public a better understanding of agriculture and its problems constitutes the best type of postwar preparedness for agriculture and incidentally for the rest of the Nation as well.

IT'S A LONG-TIME BUSINESS

From its very nature agriculture is a long-time business with relatively slow turn-over. It cannot adjust itself quickly and painlessly to the shocks which are the lot of our economic machine; it must depend to a considerable extent upon the inherent soundness and flexibility of the individual farm business. An intelligent program of livestock production usually is the keystone of such a farm business organization.

We have in Nebraska approximately 48,000,000 acres. Agricultural production within the State varies greatly because of variation in soil, in altitude, in topography, and in the rainfall or water supply.

Here at North Platte's very doorstep we have slightly more than one-fourth of the State, or twelve or thirteen million acres, included in the Sandhills area. It is the best managed large body of pasture land in private hands in the United States and is far superior to most of the publicly controlled range areas. This vast body of land is adapted only to the production of grass and hay. Besides the Sandhills, another one-fourth of the State is in pasture and about 4,000,000 acres in hay. Between one-half and three-fifths of the total area of the State produces pasture and hay. More of it should.

This year we grew for harvest 15,000,000 acres of grain with a total production of about 415,000,000 bushels. Of this about eight and three-fourths million produced more than 325,000,000 bushels of corn.

LIVESTOCK A FUNDAMENTAL

The ancients had a proverb that no land is poor which is rich in livestock, and no land is rich which is poor in livestock. Livestock production is of primary importance in Nebraska. As already suggested more than one-half of the total area of the State is in pasture or hay crops.

It is only through the use of roughage-consuming animals, principally beef cattle that the production of this half of the State can be mobilized for human needs, either in peace or war. It is only in this way that the products of this part of the State can be made available to give employment to men and capital employed in transportation, in processing industries such as the important meat-packing industry, and in the business of distribution. It is only in this way that the products from our range, pasture, and hay lands can be converted into products suitable for exchange for all of the industrial products and the services used by the farmer or rancher and his family.

The same thing applies to a great extent to the products from the land devoted to other agricultural production. In the first place in periods of low rainfall the nonirrigated portion of this land produces little in the way of marketable crops, but does produce roughage, which, if properly utilized by livestock enables the farm family to hang on until nature is in a more kindly mood.

In years which we like to regard as normal, years of good farm production, livestock still adds stability and flexibility to the agriculture of the State. More than 85 percent of the corn grown on American farms normally is used for livestock feed. Somewhat more than 40 percent of our corn is used for hogs, about 24 percent for cattle and 15 percent for poultry.

Wheat, which is grown on about one-fifth of the land devoted to grain production in Nebraska, is thought of primarily as a bread grain. Even here, the byproducts from its milling and at times a considerable part of the wheat itself go into livestock feed. Most of the other grain and the thousands and thousands of tons of roughage produced as a byproduct of grain production, as well as the byproducts from sugar production go to market by way of livestock.

STATE'S INDUSTRY AGRICULTURAL

It is not surprising, therefore, to find in Nebraska about 700,000 milk cows, more than 3,000,000 other cattle, three and one-half to four million hogs, 1,000,000 sheep, and 20,000,000 chickens. From 75 to 80 percent of the cash farm income in Nebraska comes from livestock and livestock products.

A few years before the war, Nebraska's manufacturing industries measured by cash volume, were based almost exclusively on agricultural products, with the meat-packing industry, the milling industry, the butter and ice cream industries, the sugar industry, the canning industry, the poultry dressing and packing industries, as good examples. Industries based upon livestock production comprised something like 80 percent of the industries mentioned.

From all of this it is obvious that Nebraska's entire economy is based on its livestock industry. The functioning of that economy in the postwar years depends upon a progressive, efficient livestock industry as well as upon the attitude of the public toward livestock production. This is true, even to a much greater extent than I have indicated and despite probable great advances in the industrial use of agricultural products in the years to come.

Agriculture in Nebraska is relatively new. Up to the present we have given little attention to soil fertility and soil conservation. Satisfactory agricultural production depends upon the conservation and improvement of our soil resources. We have reached the point in our agricultural development where the conservation of the soil is of primary and vital interest to every Nebraskan.

LIVESTOCK IS SOIL CONSERVING

The increasing emphasis being placed on irrigation in the State merely makes the problem more acute. It is useless to talk about a program of soil conservation and improvement unless the program includes the intelligent use of livestock. The maintenance of soil fertility and the conservation of our soil resources are based almost entirely upon livestock production.

What can we expect for Nebraska's agriculture and hence for ourselves in the years which lie ahead? The answer depends largely upon what the Nation does in its approach to national and international problems, and what we in Nebraska do about our own problems.

No man can foretell with any accuracy the change in industry and agriculture which will come as a result of this war and the settlements attempted at its close. We know if we know anything that peace will not bring us the kind of world for which we wish. That remains for us to build. The most that we can logically hope for is that we shall set our faces in the right direction, determined to build a progressively better world.

If we can learn anything from history it is that we are not likely to cooperate effectively in such an undertaking unless we can keep our own social, economic, and political house in order. Some there will be who will argue that the other must come first.

I submit that the very cornerstone of a stable peaceful world will be a stable, progressive United States with a highly developed sense of social responsibiilty. In such a United States, the great agricultural area of which Nebraska is an important part, with its economy based upon a sound and stable program of livestock production must play a vital role. Livestock production makes for patience and stability. It breeds faith and confidence in orderly process and determination that order shall prevail.

STOCKMAN A CONSERVATIVE

Of course there are speculators in the livestock business but by and large the livestock producer is not a speculator. His program necessarily is a long-time program.

When he saves a heifer calf to add to his breeding herd he knows that from 2½ to 3½ years must elapse before his investment brings him any return. If he feeds out the heifer's first calf or carries it over in the producing area, another year or more passes before he cashes in on his investment. Is it any wonder that the livestock producer believes in evolution rather than revolution? Normally he operates on narrow margins and the maintenance of even these margins depends upon constant attention to the details of his business. The processes of nature may be helped; she cannot be cheated. It is not surprising that the livestock producer believes in order and stability; that he is a man giving and inspiring faith and confidence; that he tends to put first things first.

Agricultural stability and progress in Nebraska require the achievement of an agricultural philosophy as profound as the great philosophies of the ages; one which looks upon the soil as a precious heritage to be cherished as the necessary basis for an enduring progressive civilization; not as a free resource to be exploited, despoiled, and thrown away.

There is no new soil; we stand or fail with what we have. We need to take to heart the story of the giant of Greek mythology who, when thrown to the earth leaped to his feet, his strength and vigor renewed from contact with Mother Earth, but who was destroyed when Hercules observed the source of his strength and lifted him from the earth while he crushed him. The maintenance of the soil is the direct responsibility of the man of the land; it is no less the vital interest of the business and professional man.

NEED FOR MORE RESEARCH

Any sound, constructive agricultural program for Nebraska is a growing, dynamic, not a dead, static thing. Such a program is not possible without an aggressive, well-organized, and well-directed research program both in the pure and applied sciences. Both are essential to agricultural progress. To speak only of livestock production, the fields of animal breeding, nutrition, and management in relation to our other resources have hardly been touched. I make no pretense of knowing how much money Nebraska should spend on agricultural research. Some months ago I heard a prominent Nebraska manufacturer say he liked to think of spending 3 percent of his sales on research. As nearly as I can estimate it, we spend less than one one-hundredths of 3 percent of the cash agricultural income of the State on agricultural research in Nebraska.

Research in agriculture is of as much importance to the nonagricultural population as to people on the farm. Improvements in the efficiency of farm production are reflected back to the consumer in better food, more food, or cheaper food, or all three. Today a smaller proportion of our population than at any other time is producing our food, and is sending a substantial part of its products overseas.

This research program should be accompanied by a forward-looking, dynamic extension program based on vision, definite direction, broad knowledge, and careful, painstaking work. In many parts of Nebraska great improvements in livestock production are possible. Livestock production can be made, as it must be made, an integral part of a sound, well-balanced farm economy, contributing to better living for all the people.

HUMANITIES A FACTOR, TOO

Above all, we shall always need the right kind of leadership in agriculture. It seems to me that effective agricultural education must be the most difficult of all educational programs. It needs to be as thorough and exact as the sciences and engineering; and as broad as the humanities. It should develop the attitude that man does not live by material things alone; that science does not provide the solution for our ever-recurring problems but is merely an extremely useful tool; that the successful use of this tool in furthering agricultural and human progress depends upon the faith, hope, intelligence, and attitudes which we bring to the use of science in our daily tasks. "Ad astra per aspera" is the motto of my alma mater. It might well serve as the motto for those who strive to help young men and women fit themselves for the great responsibilities of agricultural work and leadership.

There is nothing new in suggesting research, extension, and education for leadership as the basis for agricultural and hence for general progress. It is vital that people in general, and especially community leaders, such as Rotarians, understand their relation to the building and maintenance of a sound and stable agriculture to a worthwhile social, political, and economic structure; and may I venture to suggest—even to a stable world economy.

Jefferson Day Address by Hon. Joseph F. Guffey, of Pennsylvania, at Indianapolis, Ind.

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. MYERS. Mr. President, on June 2, 1945, before a Jefferson Day meeting held at Indianapolis, Ind., my distinguished colleague, the senior Senator from Pennsylvania [Mr. GUFFEY], delivered an able and interesting address, which I ask to have printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we all know, this gathering of unterrified Indiana Democrats was to have been held on April 13, Jefferson's birthday. And the whole world knows that the reason for this postponement was the tragic death on the very eve of Jefferson Day of our great war President and Democratic leader, Franklin Delano Roosevelt. Stricken down just before that gigantic victory over Nazi Germany which he had done so much to make inevitable, Roosevelt automatically becomes one of the Big Five of American history: George Washington, Thomas Jefferson, Abraham Lincoln, Woodrow Wilson, and Franklin Delano Roosevelt.

Now is not the time to pay tribute to his magnificent achievements or to express our grief at his departure. We can best do both by the vigor with which we follow through on Roosevelt's program and policies, to which his successor, President Truman, has subscribed, and above all by the sincerity with which we keep the Democratic Party liberal, forward looking, and sensitive to the rights and interests of the common man.

It seems appropriate that we should take note of the marked resemblance between the ideals and policies of the founder of our party and of President Roosevelt. Thomas Jefferson was much more than the founder of the Democratic Party—he was a great American, a great political philosopher, and a great citizen of the world. Thomas Jefferson gave voice and substance to principles and ideals which are truly immortal and which endure in the Nation today because of the Democratic Party.

Those ideals are exemplified in the Declaration of Independence and the Bill of Rights—those famous first 10 amendments which have well been called the soul of the Constitution.

Jefferson was no cloistered scholar, no mere writer, but a man who lived in and worked with the world of men and events. His greatest single achievement was the enactment of the statutes of religious toleration in the State of Virginia and he accomplished this at the early age of 25. Thirty years later this was made a blessed and permanent part of our way of life through the Bill of Rights.

Thomas Jefferson believed in human rights as against property rights and, if need be, he even suggested that it might be well if there should be a revolution every generation to prevent the growth of privilege. He pitted himself from the start against unscrupulous men of property—the bankers, the landowners and merchants, whose hero was Alexander Hamilton, and who perpetuated their interests and privileges in what later became the Republican Party.

What makes Thomas Jefferson so outstanding in his bold philosophy of human rights is the fact that he himself was a man of wealth, with ample means and a fine education, a landowner and country squire, a slaveholder who advocated the abolition of slavery, a man who saw, long before it was asserted by others that it was wrong for men to own human property, that the real wrong was in allowing property to own men.

Jefferson was a man of the world. He was at home in the world of men and ideas. He represented his country as Minister to France and warned the property-minded administration of his day that the French Revolution was an expression of the same human rights which had given form and meaning to the American Revolution. He served as Secretary of State under Washington and as Vice President under John Adams, but faced with the blind reaction of the Hamiltonians against liberalism, he formed the Democratic Party and through that party became President. He put into practice the political philosophy he had enunciated.

In this connection let me urge you to read, if you have not already done so, Young Mr. Jefferson, by our distinguished Ambassador to Chile, the Honorable Claude G. Bowers, of your State. Here, placed in perspective and with fresh interest and mature scholarship, is the best current account of some of the greatest years of this dynamic American. Ambassador Bowers, as we all remember, served as our Ambassador to Spain before and during the Franco revolution. In contrast to some of our other envoys to Europe, Mr. Bowers gave clear warning of the dangers to America in the events which he witnessed. Unfortunately, in those years the Congress and the public refused to see the truth, ignored the facts, and attacked those who warned them.

It took Pearl Harbor to convince some Senators that the Axis meant business, and even today, after three and a half years of bitter war, there are some Americans who still believe things are not as they are and that we can all go back to where we were a generation ago.

The Nazis made no such mistake. Documents captured by our intelligence forces contain the text about America taught in the Nazi High School for Politics in Berlin. This political academy was a sort of political West Point for the Nazi officials and in their training they tried hard not to deceive themselves about the real political strength of this country. What Goebbels told the German people about us was one thing; what the future Nazi diplomats were taught was another.

The Nazis taught their future officials that America was divided politically between those who followed the policies of Alexander Hamilton and exalted property rights and those who followed the principles of Thomas Jefferson and believed in human rights. The students were carefully warned not to dismiss Jeffersonian democracy as foolish or unscientific. On the contrary, said the Nazis, Jeffersonism was a dynamic theory which could become a very great danger to the Third Reich. Jeffersonian democracy is what the Nazis feared in America more than they feared our physical power or industrial production.

The Nazis were absolutely right in fearing Jeffersonian democracy. The war is being won by the United Nations because Jeffersonian democracy has given fire and courage to our allies and has carried our men and power to the ends of the earth. Thanks to Jeffersonian democcracy, the frontiers of freedom run far beyond the Rhine or Manila. It has conquered Germany and is lapping the very coasts of the Japanese homeland.

Yes, the Nazis taught well in this respect—for the thing which defeated Adolf Hitler was the Jeffersonian democracy of the United States. Hitler's challenge to human rights and world freedom naturally made us Americans aline ourselves against the Axis. We followed what Thomas Jefferson wrote and did a century and a half ago.

Because of this, our country has come through this terrible war with no material menace to human rights, with no threat of insurrection and no anti-American underground. Because of this, we have held two national elections—one congressional and one presidential—during this war, without faltering for a moment in our military efforts. Because of this, we have maintained a free press and tolerated political opposition, with no serious damage to our national morale or to our national unity.

That is why, fellow Democrats, it seems clear as daylight that the future of Jeffersonian democracy is assured. It has survived the greatest test of all—the test of war—in which all human institutions are weighed in the scales of battle. It is winning for our country a world-wide battle against enemies who had prepared for decades to destroy us. It is that political force which is greater than all the political forces which can be brought against it. Because it rests simply and sincerely on human rights, human dignity, and human happiness.

I know that we Democrats will always venerate the birthday of Thomas Jefferson. I also know that Roosevelt's birthday will be celebrated not only here, but all over the world.

A few minutes ago I mentioned Claude Bowers, great as a diplomat, as an historian, and as a political journalist. Ambassador Bowers, now in Chile, recently published an article in the Virginia Quarterly Review entitled "In Defense of Politicians." I quote from that article:

"To recapitulate: Democracies operate best through political parties.

"Political parties function only through politicians.

"Eliminate politicians and you wipe out parties.

"Wipe out parties and you throw democracies into a state of unorganized, undisciplined chaos.

"And when in a democracy the people are unorganized, undirected, undisciplined, the Fascist has his excuse and the tyrant appears to dominate the nation by brute force.

"That is the reason the Mussolinis, Hitlers, and Francos hate and exterminate the politicians; and that is the reason it is so stupid in a democracy to join them in their hue and cry.

"And that is the reason why the theorists and scoffers who sneer at representative government, political parties, and politicians are consciously in some cases, and unconsciously, let us hope in most, making their contribution to the Fascist effort to destroy democracy in the United States."

That is the end of the quote.

I believe in politicians and I'd like to say to you right now that if Indiana had sent its No. 1 politician, Tom Taggart, to the Senate in 1916 and if Illinois had sent Roger Sullivan to the Senate in 1914, America would have joined the League of Nations and we would not be engaged in this Second World War. Both Taggart and Sullivan were attacked by the Republicans on the ground that they were politicians—so they replaced Taggart with Jim Watson, who never had a thought that was not 100-percent partisan politics, and replaced Sullivan with Sherman in Illinois on the ground that Sherman looked like Abraham Lincoln.

Please don't think that in making these references to "unhappy, far-off things and battles long ago" I am attacking the two-party system. I only wish we had real, honest opposing parties operating in every State in the country. We need true and convinced conservatives—social and economic conservatives—to balance the dynamic liberalism of Jeffersonian democracy.

What we face, instead, is an opposition of blind, stubborn reaction which may, in time of stress, engender a spirit of ruthless radicalism, unless we can maintain the spirit of Thomas Jefferson as the controlling force in our public life. That there have been and are many fine, public-spirited and patriotic Republicans I would be the first to insist, but they do not and have not represented or controlled the program or policy of the Republican Party since the days of Theodore Roosevelt. The Republican Party has not adopted a liberal idea or forward-looking program since Lincoln freed the slaves.

I speak as a life-long Democrat. I first became active in politics in 1896, when I voted for William Jennings Bryan, who was then the best leader of Jeffersonian democracy and whose courage, leadership, and persuasive oratory lifted the party out of its rut and prepared it for the leadership of Woodrow Wilson and Franklin D. Roosevelt. I joined the Democratic Party then and I have joined no other organization of any kind since then. And as a lifelong Democrat there are two things in particular which I would like to say to you tonight.

First, as you know, I led the floor fight for the renomination of Henry Wallace as our party's Vice President last year. It was a good battle and a fair one. On April 26, five Pennsylvania Democrats—both Senators, the national committeeman and national committeewoman, my sister, Mrs. Miller, and Chairman Clark, of Philadelphia—called on President Truman to assure him of our wholehearted support and confidence. We came away full of pride in our President and satisfaction in his achievements in the most difficult job in the whole world.

We found him the same Harry Truman he had been in the Senate for 10 years, humble, efficient, trustworthy and wise; a man to be relied upon both in party and national emergencies; a true servant of the people who will call in the best advisors, but who will do what he thinks right, any influence to the contrary notwithstanding.

It does not take much imagination to realize the feelings of President Truman when he heard that he must take the oath of office of President of the United States. He told us he thought when he was called to the White House on the afternoon of April 12 that he supposed the President had returned and wanted to see him. It was not until he met Mrs. Roosevelt that he knew what had happened. Despite the personal grief he felt, President Truman never faltered. He immediately made plans to carry forward the Roosevelt policies. He wastes no time on nonessentials—gets right to the point—and proceeds in a straight line.

So once more we Democrats can be proud of our Chief. We are all united behind him and our present job is to give him every ounce of support now and in the future.

Not only has President Truman pledged himself to carry out the Roosevelt program. He is also committed to carry out all of the pledges of the Democratic Party platform on which he was elected. This includes his support for the equal rights amendment—which will be heartening news for you Indiana women who have worked so long and so unselfishly for this national reform.

I want to assure you that I am for Harry Truman all the way and in 1948. He is doing a great job. He needs our united support and he shall have it.

The second thing I want to tell you, as a lifelong Democrat, is that it is always a mistake not to fight for our principles.

For example. I remember my father telling me that the greatest mistake ever made by the Democratic Party in Pennsylvania was not to demand a recount in the election of 1880. That was the year when Garfield defeated Hancock for the Presidency and the electoral vote of Pennsylvania was obtained by corruption and fraud. The Pennsylvania high-tariff Republicans raised a large slush fund in alarm over General Hancock's remark "that the tariff was a local issue, depending upon whose ox was being gored." Those fraudulent ghost votes gave the State to the Republicans. The Democrats did not demand a recount because it would not have made any difference in the national outcome. After that, the ghost votes of Pennsylvania grew from a few thousand in 1880 to nearly six hundred thousand in 1930 and the State of Pennsylvania was safely and corruptly Republican for more than 50 years.

You in Indiana face a similar situation today.

Fraudulent Republican votes in Marion County and corrupt Republican election officials not only stole this State's vote from Roosevelt but counted out the Democratic candidates for the United States Senate and Governor.

In my opinion, if there had been a contest before the Senate Committee on Privileges and Elections, the Republican candidate would not have been seated in the Senate.

You Indiana Democrats still have the opportunity and the clear duty to prosecute those Republican officials responsible for this outrage.

You know who they are.

The facts are fully covered in the report of the Special Committee to Investigate Presidential, Vice Presidential, and Senatorial Campaign Expenditures in 1944, pages 61 to 68.

The committee found that prior to the 1944 election a State director of registration in Marion County had canceled the registration of 19,278 Democrats, and 2,232 Republicans. The responsible official was named as Mr. Moss.

The committee found that a change in the boundaries of 80 precincts in Marion County had confused the registration records of thousands of voters. These changes and this confusion were supervised by Mr. Carroll Kramer, a Republican ward worker who resigned on November 5, 1944.

The committee found that about a week before the election, the Republican member of the Marion County election board, Mr. Albert Thompson, and the Republican member of the State election board, Mr. Edwin Steers, had conferred for the purpose of finding effective means to disfranchise Democratic voters by an opinion from the attorney general, himself a Republican candidate, advising county officials, without statutory authority, to deny the validity of affidavits in lieu of registration. The Republican responsible for this extra legal opinion was Mr. James A. Emmert, attorney general, who directed the election officials of 92 Indiana

counties to ignore the instructions of the State board election officials on November 4, 1944.

The findings of the majority of the committee were supported by a minority report by Senator BALL, of Minnesota, Republican, who declared that "the proportion of Democratic registration cancellation * * * supports the general impression * * * that partisanship entered into the conduct of the election to an unfortunate degree."

Senator BALL also confirmed the majority's finding on Republican manipulation of registration. Senator BALL added that the telegrams dispatched to the 92 Indiana County election boards sent in the name of the Republican Attorney General were paid for by the Republican State committee. These telegrams, said Senator BALL, were used by election officials to deny the ballot to Democratic voters. Senator BALL termed the Attorney General's conduct "highly improper" and concluded that the whole conduct of registration and voting by the Republican Party officials in Indiana amounted to a deliberate attempt to disenfranchise many voters and declared that the present Republican system in Indiana is "an invitation to fraud."

Take it from the voice of experience—if you knuckle down and go along with this theft now, you may not again carry the State of Indiana for the Democratic Party within the lifetime of any man or woman present here this afternoon.

You have let the Republicans taste the blood of stolen votes without a contest and they will keep on with their stealing, no matter how the people of Indiana may actually register their political desires unless you stop their racket. Here is a good battle for you Indiana Democrats to make for your own sakes and for the sake of the entire Nation.

Battles lie ahead. They always have and always will. But we Democrats can fight the good fight with a stout heart and no compromise with evil. We have learned from great men like Jefferson and Roosevelt that the source of political power in a democracy is a sense of practical responsibility for and accountability to the average man and woman. We know that the future is America's and the future of America is ours only so long as we make human right the touchstone of our program and policies.

Yes; it is splendid to have fleets of thousands of bombers roaring over Berlin and Tokyo. Yes; it is grand to have our battlewagons masters of the broad Pacific. Yes; it is great to see our armies move on to victory. But it is finer, grander, and greater still to realize that all of this power is evoked by and is at the service of that which is divine and enduring in humanity; decency, dignity, justice, and neighborliness to all mankind.

Review by Richard L. Neuberger of the Autobiography of George W. Norris

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a review of the autobiography of the late Senator George W. Norris, entitled "Fighting Liberal." The review, which is by Capt. Richard L. Neuberger, appeared in the Progressive of May 14, 1945.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

GEORGE NORRIS' PROGRESSIVE LEGACY—THE AUTOBIOGRAPHY OF A FIGHTING LIBERAL

(Fighting Liberal, the autobiography of George W. Norris, the Macmillan Co., reviewed by Richard L. Neuberger)

For a year and a half after his defeat for reelection in 1942, Senator George W. Norris lived in the little Nebraska town of McCook, from where he first had gone to Congress four decades before. This was sufficient time to enable him to complete his autobiography and to leave for liberals all over America a rich legacy of the progressive movement.

The book has just been published. This is no ordinary publishing event. It is the story of one of the most remarkable careers in American history, a career which embodies the tale of the long fight in behalf of the average man. Here appear names familiar to liberals throughout the land—Gifford Pinchot, Teddy Roosevelt, Borah, the La Follettes, Oswald Garrison Villard, Harold L. Ickes, Harry Lane, Paul Y. Anderson, Dave Lilienthal, and, of course, Franklin D. Roosevelt.

The book is jerky. The sequence is poor. Not all the logs in the structure are dovetailed. Much of the chinking is left out. Some of the characters are ignored. But these are not major criticisms. Here is the testament of a great man, a man whose monument is the Tennessee Valley Authority, a mightier edifice than any pharaoh ever reared.

The story of Norris is the story of the struggle to change the American Congress from a refuge for privilege to a bulwark for the common man. The struggle has been successful. Today legislation to aid the people can get a hearing in Congress. Usually it is adopted.

When George Norris went to Washington in 1902, this was not the case. Uncle Joe Cannon ruled the House omnipotently, squashing bills which displeased him. Norris was a regular Republican, a GOP stalwart. But he broke the iron rule of Cannon. When he left the House to enter the Senate in 1912, the lower Chamber had been democratized. No longer could one man, the Speaker, superimpose his own will on colleagues elected from all over the United States.

Norris commenced in politics as an orthodox Republican. Yet he came from a boyhood of poverty, in Sandusky County, Ohio. He and his widowed mother supported his eight sisters. The mother, Mary Mook Norris, a remarkable and courageous woman, spun her son's clothes.

As a young man, George Norris went to Nebraska, but first he migrated all the way across the continent to Washington, then a Territory and not yet a State. On that wild frontier he taught school. In Nebraska he became a prairie lawyer. He ran for office on the Republican ticket and was beaten for district attorney of Furnas County by a Populist. The Populist called him a reactionary. None of them could see into the future, when reactionaries from Puget Sound to Cape Cod would be denouncing as a wild-eyed radical the man who began his political career so conservatively on the Nebraska plains.

Looking back, Norris says he believes he deserved defeat in that election. This is one of the warm qualities of his autobiography. Today, with rich rewards to be won by men who seem infallible, it is unique to read a book which confesses to mistakes.

Sorrow is a crucible in which greatness is often smeltered. Norris suffered intensely in his early life. His mother, whom he worshipped, dwelt in poverty. He himself, wandered about Washington Territory seeking in vain for opportunity for them. His first wife lost a child when their buggy overturned. Then his wife died. His second wife, who still lives and is the Senator's widow, came into the home to become "a tender-hearted, loving mother" to Norris' three daughters. His second wife gave birth to twin boys, who died in infancy.

"It was a shadow that never lifted completely from us," the Senator writes.

Out of this agony and sorrow came the melancholy courage which inspired so many Americans. Franklin D. Roosevelt once referred to Norris as "the very perfect gentle knight of American progressive ideals." Unconsciously, without pomp, Norris lived this role. His old friend, James E. Lawrence, says in the introduction, "Senator Norris never knew what it was to play." In the Senate he often worked 16 hours a day. He was never frivolous, never gay. He might stand around a piano with a few associates and sing Clementine or Tenting Tonight, but such interludes were rare. He spent his time on the job.

Norris' job was looking after the interests of the average man. No article or review could detail so rich a career. It stretches in retrospect through many valiant battles—against the purchase of Senate seats, against imperialism in South America, against monopolies, for public ownership of power, for minimum wages and maximum hours, for the conservation of the country's natural resources.

After his early experiences as a regular Republican, he invariably supported the liberal candidate for President. He was for Teddy Roosevelt in 1912, for Bob La Follette in 1924, for Al Smith in 1928, and for Franklin D. Roosevelt all four times that he ran, although death cut short the old Senator's final opportunity to vote for F. D. R.

Four years after his indorsement of the elder La Follette, Norris stumped the Nation for Al Smith. This required great political bravery, for Nebraska was dry and Protestant, while Smith was a Catholic who advocated repeal. In fact, Norris himself was inclined to back prohibition, but he felt that economic issues outweighed the liquor question. In his autobiography he says that his stand was justified when "Mr. Hoover later vetoed TVA in the most outspoken terms."

HIS GUIDE: CONSCIENCE

Norris tells why he voted for American participation in the present war, but fought with all his strength to block the war resolution in 1917. "The circumstances were most dissimilar," he claims. "In 1917 there was no immediate threat of war reaching American soil. In 1941 an act of war was committed by Japan against the United States at Pearl Harbor under the most treacherous and despicable circumstances, and the following day Germany and Italy issued declarations of war against the American people. In the present struggle the Axis plan of aggression and conquest in my eyes constituted a direct threat to the safety and security of the United States."

Norris details the persecution and vilification which he endured for his opposition to war in 1917. He was denounced all over the Nation, as were the other five Senators who voted with him, including his good friends, Bob La Follette and Harry Lane. Lane, who came from Oregon, died a few weeks later.

"In this connection the war resolution, perhaps, more than any other issue," writes Norris, "raised the question of what should be the attitude of a Member of Congress. Should he always follow what he believed to be the majority sentiment of his district, or should he obey his own conscience even when, in doing so, it appeared he was voting against the wishes of a majority of his constituents?

"I have thought conscience was the guide.

"Otherwise, a Member of Congress giving weight to expressed public sentiment, becomes only an automatic machine. If that

is the line of duty of a Member, then Congress requires no patriotism, no education, and no courage. All a Member has to do, if he does follow that which he believes to be the will of his constituency at all times, is to attempt to take such action as will bring him the most votes in the next election.

"In the end, the only worth-while pay in Congressional service is that which comes from a satisfied conscience in the knowledge that you have done your duty as God gives you light, regardless of the effect it may have upon political fortunes."

This was Norris' creed. It might well be the creed for all Members of Congress. The aged Senator never rode the bandwagon. He backed T. R. and Fighting Bob La Follette and Smith while Nebraska was voting for their conservative opponents. He clung to F. D. R. after majority sentiment in Nebraska had returned to the Republican Party. Fortunately for Congress and for the Nation, others have followed Norris' example. Men of such diverse views as Wheeler, of Montana; Coffee, of Washington; Tom Eliot, of Massachusetts; Lister Hill, of Alabama; and Morse, of Oregon, have defied sentiment in their constituencies to vote their convictions.

FIGHT FOR PUBLIC POWER

The Hetch Hetchy power fight in California began in 1912, the year Norris entered the Senate. It still continues today. In his chapter on Hetch Hetchy, the old Senator gives a picture of what the persistent battle for public power has meant to him.

He reviews the long and untiring effort to have the people of San Francisco, rather than a private monopoly, generate and sell the water power from the Hetch Hetchy project. The old man from the prairie tells of the majestic Sierras, pouring their tribute of melting ice and snow down through granite canyons to the Pacific. He describes what this vast energy, harnessed and tapped, can mean to the homes of the Nation.

Power became to him a symbol of the struggle between entrenched greed and the hopes of the masses of the people. If a great river—a river belonging to the Nation—could be developed for private profit, then where would the people's interests be protected?

Into the White House in 1933 came a President who was not afraid to act, who was not afraid to use the sovereignty of his great position to help the average man. The relationship between George Norris, the boy from 80 acres of stumps, and Franklin D. Roosevelt, the squire of Hyde Park, became one of the stirring stories of America. They put through TVA. Dams were built on other rivers, on the Sacramento, on the Columbia, on the Missouri, on the Colorado. "Mr. President," said Norris with tears in his eyes, "my dreams are coming true." And Roosevelt, standing at Ak-sar-ben Coliseum in 1936, paid tribute to Norris as the outstanding leader of American liberalism.

THE WORK LIVES ON

Senator Norris' book contains one chapter which might be read with great profit by the men now making the peace. This is his chapter on the defeat of the League of Nations. Although a strong supporter of President Roosevelt's foreign policy, Norris defends vigorously his opposition to the Treaty of Versailles. He calls attention to the fact that the treaty gave Japan the Shantung Peninsula of China, and that China was a friendly power.

"Here were 30,000,000 people of Chinese blood to be placed under brutal Japanese rule," the old Senator writes. "I was outraged by this injustice to China. Japan was a part of the League of Nations but her heart was impure. The Shantung provision * * * was compounding and perpetuating a crime against the Chinese people. I attacked that transfer of Shantung to Japan."

With righteous indignation, Norris tells how he based his opposition to the League on the way that the great powers sold China into the clutches of Japan. And he reminds his readers that in October of 1919 he stood on the floor of the Senate and warned:

"If you will look at a map of the Pacific Ocean, you will find that the giving of the German island possessions north of the equator to Japan means that Japan is brought thousands of miles nearer our coast. When Japan gets those islands fortified she will not be so distant from us as she has been heretofore."

And, sadly, sorrowfully, the old Senator recalls the American blood shed to get back those fortified islands, and the Chinese blood shed because Japan was put astride the Shantung Peninsula.

Backer of President Roosevelt's foreign policy that he was, Norris could not bring himself to put in his autobiography that he regretted his attacks on the League, for he felt that the treaty establishing the League was the beginning of Japan's brutal march of conquest.

Good will among nations was as much a part of Norris' creed as good will among men. In a highly interesting passage he tells how he came to know about Russia and Russia's people from Col. Hugh L. Cooper, the brilliant American engineer who constructed the huge Dneprstroy Dam. Norris was so impressed by what Cooper had to say about Russia that he sent the colonel to see President Roosevelt, who also learned much from the American who was harnessing the Soviet Union's great rivers.

Both of them are gone now—F. D. R. and Uncle George. Defeat at the polls marred Norris' final years, although he writes, "I have no bitterness in my heart. I have no ill will toward any man."

Roosevelt sleeps forever. Norris is dead and gone. Yet water breaks over the great parapet of Grand Coulee and flows through the penstocks at Bonneville. The Clinch foams white as it topples across the crest of Norris Dam. The Tennessee hums a dull roar where it surges through Wheeler and Pickwick and Hales Bar and Chickamauga. The Sacramento spreads out in a broad lake, as it is slowly penned up behind Shasta. Across the uplands the transmission towers stretch, carrying power to farms and homes and factories.

In this fashion does Uncle George's work live after him. This is one of the ways that F. D. R. will be remembered.

As a boy Norris saw his mother planting an apple tree. "Why do you work so hard, mother?" her son asked.

"I may never see this tree in bearing, Willie," she said, "but somebody will."

The lesson which uneducated Mary Mook Norris taught her son, George William, was well learned.

Value of Schools and Educational Opportunity in America

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "New England as a National Example of the Value of Schools and the South as a National Challenge Toward the Equalization of Educational Opportunity in America," by Frank P. Graham, delivered in Boston, Mass., December 8, 1944, before the annual meeting of the New England Association of Colleges and Secondary Schools.

I am informed by the Public Printer that it is estimated it will cost $130 to print the address in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW ENGLAND AS A NATIONAL EXAMPLE OF THE VALUE OF SCHOOLS AND THE SOUTH AS A NATIONAL CHALLENGE TOWARD THE EQUALIZATION OF EDUCATIONAL OPPORTUNITY IN AMERICA

(By Frank P. Graham)

THE SOUTH AND NEW ENGLAND

The South and New England have in common their proud but different sense of locality and region. New England, with its far northeastern projection, its geographic detachment from the interior continent, its stubborn Puritan tradition, its two centuries of the maritime economy and its rich cultural heritage, is, with all its nationally creative Americanism, also a region distinguished and apart. The South below the Mason and Dixon line and below the Ohio River, with its Southern sun and soils, with three centuries of a bi-racial structure, and more than a century of the cotton economy, with all its nationally historic traditions and nationally creative leadership, has long been a region unto itself.

Beyond this deep sense of locality and the rooted attachments of place and region, New England and the South have in common the same British folk strains. They share the pioneering in colonization, the primacy in the American Revolution and the founding of this Republic. Running through both their histories has been the Biblical faith with a heavy Calvinistic tone and emphasis on simple piety, hard work, and thrift. These two were the twin nurseries of the young and ever moving West. These two regions have experienced and reconciled both separatism and nationalism. May there always shine through both of them for all America an idealism persistent above all our faults and failures. Today the strongest ties of faith and history and a common aspiration bind together New England and the South with the other great regions in one America fighting for one world of freedom, justice, and peace for all peoples regardless of race, color, creed, or economic power.

When we look back to our American beginnings we see rise early into view the rough shores of what is now Maine and the shallow sound of what is now North Carolina. Maine and North Carolina have in common both the hazards of their shorelines and the historic ascendancy of their mother commonwealths, Massachusetts and Virginia. Maine which became one of that large family of States given birth by Massachusetts was yet the forerunner of Massachusetts. The shores of Maine were the proving ground for the first New England settlements.

ROANOKE ISLAND

Before Massachusetts, before Jamestown itself, on Roanoke Island was built the first English home, the first English chapel; was born and was baptized the first English child in the New World. Earlier English explorers had landed on bleak Newfoundland shores. English sea dogs had raided the Spanish Main and had captured rich treasure fleets in many western seas. For a long time the English, too, with constant illusion looked for the Northwest Passage and the southwest gold. Nevertheless, it was on Roanoke Island, in what is now North Carolina, that the English people first came ashore in 1587 to build a home, till the soil, establish a rival base of

commerce and power and lay the foundations of an overseas empire. Running through the story of the Lost Colony are overtones of legend, mystery, tragedy, and the deep silence of the forest unbroken save by the syllables upon a tree.

Back of it all we see in England, towering across the seas and centuries, the majestic figure of Sir Walter Raleigh, courtier, statesman, historian, poet, soldier, seaman, who was not to see the promised land but was to become the founder of English America. He sank a personal fortune in his American failures but his unbroken courage and unfailing faith caught the imagination of the English people and stirred their corporate will to build the overseas dominions. The failure and lessons of Fort Raleigh made straighter the way to Jamestown and Plymouth Rock. Roanoke Island upon which Raleigh stumbled became Britain's stepping stone to empire. In the first colony planted there were the seeds of the old Empire and the new Republic.

The men, women, and children lost on Roanoke Island rose from the dead all the way from Maine to Florida. Facing west to the wildnerness with axes, muskets, Bibles, and chartered liberty in their hands and history, they crossed mountains, rivers, prairies, plains, deserts, and mountains again to another sea. They cleared the forests, tilled the earth, exploited its mines and resources, built churches, schools, roads, canals, railways, factories, libraries, hospitals, cities, and States, making America to the pattern of their haphazard but relentless wills. Looking toward some such time as this in his unconscious immortality, Sir Walter Raleigh, in the midst of his failures and some years before there was to fall upon his neck the ax, which, he jested, was a sharp medicine that would cure all diseases, said simply, "I shall live to see it an English Nation."

NEW ENGLAND LEADERSHIP

New England with rugged shores, rigorous climate, and reluctant soil, without great rivers and superior harbors, without rich natural resources in coal, iron, copper, and oil, has played an eminent and at times preeminent part in the making of America. New England, a chief base of English colonization and American expansion and a cradle of the American Revolution, was the birthplace of American shipbuilding and maritime enterprise, the American industrial revolution, the American renaissance in literature, history, science, and philosophy, of far-reaching religious movements, and humanitarian causes, of colleges of liberal arts, of private preparatory and public schools, public libraries, denominational colleges, schools of technology and graduate universities for scholarship and research.

The textile industry had its American origin in Rhode Island, copper mining in Vermont, the brass industry in Connecticut, the maritime industry in Massachusetts, Rhode Island, New Hampshire, and Maine, and machine tools in Rhode Island, Connecticut, and Massachusetts. The invention of the mechanical techniques of the interchangeability of standard uniform parts, by which was erected the modern American process of mass production, had its origins with the gunsmiths of Connecticut, the precision tool makers of Rhode Island, and the clock makers of Massachusetts. By these techniques of mass production through the cooperation of labor and management all over the Nation, America has risen to be the world's foremost industrial power.

On these early New England processes of standard and interchangeable parts, expanded to the proportions of American daring and enterprise across a continent, now turns the freedom of mankind. The region of these inventions of the land, these discoveries of the mind, these resources of the spirit, these great scientific, literary, philosophic, and humane movements, is coincident with the region of preeminent private, denominational, and public schools, libraries, laboratories, colleges of liberal arts, and universities of thorough scholarship and unceasing research. The year 1936 marked the tercentenary commemoration not only of the founding of Harvard but also of the significance of higher education in America. Three of the greatest American universities, four of the most historic colleges of liberal arts, two of the foremost schools of technology, are in New England. Three of the half dozen most distinguished colleges for women in America are in the one State of Massachusetts. The North American Review and the Atlantic Monthly long set the critical standards of American literature and thought. Public schools which began in the Commonwealth of Massachusetts are now the chief concern of State and the chief resource of the hope for freedom and equality of opportunity in our national democracy.

To call the roll of New England preachers and teachers, sailors and soldiers, lawyers, orators, and statesmen, poets and painters, philosophers and seers, reformers and crusaders, scholars and critics, editors and publishers, scientists and technologists, shipbuilders and railroad men, merchants, industrialists and labor leaders, insurance leaders and financiers in the little States of New England is to call a long list of the makers of America forever on the honor roll of the Nation.

THE VALUES OF THE MIND AND THE HUMAN SPIRIT EXPRESSED IN SCHOOLS AND LIBRARIES

The explanation of New England is not in rivers, harbors, soil, or natural resources. The character and education of the people rose above the lack of resources in a tough environment. New England teaches us that the resources of the mind and spirit are the greatest resources of all. The historian Morrison makes clear that the resources of New England were the resources of a people steeped in the Bible and bred to the sea. To the acknowledged part played by the Bible and the sea must be added with justification also in the record the school and the library.

Whether the people of New England spent more per capita on schools and libraries because they had more to spend or whether they had more per capita wealth because they spent more on schools and libraries, there has been a long continuation of the coincidence. Some communities here and there have learned the value of this coincidence and have even surpassed the communities of New England. The test of the mind and the spirit of a people is not only in their sense of values and in their day to day work and living, but also in the way they meet a crisis.

Three times the New England commonwealths have found themselves near the edge of economic decay and disintegration. Three times their doom was pronounced. But religion and learning, education and skill, character and will, schools and libraries became the foundations of intelligent adjustments to hazardous times. When it became clear in Massachusetts and adjoining communities that they could not greatly survive as agricultural communities, the people had the necessity, the enterprise and the trained intelligence to turn to the sea. Massachusetts, at the center of New England, became in the eighteenth and far into the nineteenth century the great maritime and commercial community of the New World.

Fishing, shipbuilding, shipping, whaling, and commerce became the resources of economic readjustments whose intelligence, skill, and daring transformed the region of abandoned farms into a region of wider enterprise and higher economic and social well being. The clipper ships of New England led the world in efficiency and beauty of design, in grace and speed of sailing, in maritime adventure and romance in the trade of the southern, the Mediterranean and Baltic Sea, through the Straits or around the Horn to Pacific America, the East Indies, and the China seas. Instead of a decline, there was an overlapping advance, and instead of disintegration, there was a reintegration of wider enterprise at higher levels of life and culture, a more vivid destiny at home and in the far places of the earth.

NEW ENGLAND CRISES AND ADJUSTMENTS EMPHASIZE VALUE OF SCHOOLS

Crisis came again to New England with the decline of the American merchant marine. New England was for a time laid low by the embargo of 1807 and the War of 1812. New tariffs cut across the free trade of the seas. New York, with its superb harbor, the broad Hudson, reinforced by the Erie Canal as the new gateway to the west, was to challenge the commercial primacy of Boston. Philadelphia, the City of the Friends, seat of the Declaration of Independence and the framing of the Constitution, first Capital of the young Republic, home of Franklin, Rush, Priestly, the University of Pennsylvania, and the American Philosophic Society, and haven of heretics, bade fair to surpass the Old World culture of Charleston and the New World leadership of Williamsburg and Boston. Moreover, oil from the earth was to supplant the whale oil from the seas. Steamships and bunker fleets of coal from other ports and other lands were to replace the clipper ships of New England.

In the War Between the States the American merchant marine practically disappeared from the seas. American concentration on the development of manufacturing, railroads, and the vast new continent long prevented the revival of the old maritime enterprise on the seven seas. Loud again were the wails announcing the doom of New England. But the people of schools and libraries, skills and insights, again made intelligent and gradual adjustments in the shift from commerce to industry. Ships and oil gave place to shoe factories and cotton mills harnessed to the waterfalls of inland streams and later to the coal from the interior continent. The people again with foresight and insight reorganized their work and lives in the management and skills of industrial mass production. In this reintegration of the English and Puritan strains were more lately interwoven the Irish, French Canadian, the southern and eastern European, and the Catholic spiritual influences to give fresh vigor, color, and variety to the texture of New England.

In these recent decades when many textile mills moved south to the cotton fields and many shoe factories moved west toward the cattle ranches, it was lamented that the flowering of New England was turning into the "sere and yellow leaf." Not so. Rather New England turned to making finer textiles and better shoes. With old skills, New England became one of the most productive arsenals of democracy. Higher skills, new specialties, and relentless enterprise against new adversities and new declines will reenergize with a new will the old land of fish and oil, ships and trade, textiles and shoes. New England will not end its chapter in the making of America as long as the resources of the mind, the enterprises of the will, and the precious things of the human spirit rise above the circumstances of time and place to reassert the unconquerable aspirations of an enlightened people for a freer and better world.

It was not what was in the soil, it was not what was under the land which provided the means of life and leadership to New England. What was in the sea was for a time largely to take the place of what was not in the land. It was mainly what was in the people which determined their destiny. The best ways in which ideas and ideals get into people are through religion and learning, a free church, a free press, and a free university. Teachers and books, schools and libraries, helped to

make New England help to make America. New England has helped to teach America that the public schools are one of the chief sources of our freedom and democracy, our progress and power.

America has not yet learned to make the public schools equal in opportunity for all the children of the people. If the people in some States would spend all their general revenues on the public schools alone, they would have schools below the national average and far below the schools in some other States which spend on schools only part of their revenues raised by comparatively moderate taxes for schools. The combined endowments of all the colleges and universities in 13 Southern States is less than the endowments of two New England universities. In such a national situation some children are educationally doomed to an unequal chance regardless of ability, talents, and aspirations. This is the case in the rural States and especially some of the southern rural States. The only fair and democratic answer is found in Federal aid to the States for education with control expressly left in the hands of the States and localities.

SOUTHERN LEADERSHIP AND PRESENT HANDICAPS

As Americans, I know you will bear with me in a discussion of the economic handicaps of the southern people in their struggles toward a fairer and more democratic society. It is needful at the outset to remind ourselves of a great southern heritage as a spiritual resource for transforming the Nation's economic problem number one into a basic hope for the whole Nation. In the South we find the first English child born in the New World, the first English settlement overseas, the first representative assembly in the Western Hemisphere, the first legally established haven of religious tolerance, the first colonial resolution for American independence, the four of the five first State universities founded in the United States, the third being the University of Vermont in the then frontier territory of New England.

In the South was born George Washington, father of our country; Patrick Henry, eloquent voice of liberty and revolution; Thomas Jefferson, author of the Declaration of Independence; James Madison, chief framer of the Constitution; John Marshall, its basic interpreter; James Monroe, promulgator of the American doctrine of the two hemispheres; Jefferson, Jackson, and Lincoln, chief founders of democracy in America; Lee, preeminent soldier and stainless example of American reunion; Booker T. Washington, the American Moses of a modern Israel; and Woodrow Wilson, the world's major prophet of international cooperation.

The southern people have heroically risen from the ruins of war and reconstruction, and despite a great tradition, find themselves under severe economic handicaps which constitute a national economic problem. This section, with 28 percent of the population, receives only 8 percent of the Nation's income and educates 33 percent of the Nation's children. The tariff structure lifts wealth out of the South. The freight-rate structure, with its high differential against southern farmers, manufacturers, and merchants, draws wealth away from the South. The industrial-financial structure pyramids capital whose great peaks of wealth and power rise far beyond the southern region. The population structure with its very large proportion of southern school children constitutes an economic overload for the South, and yet, if justly accounted for, through more equal educational opportunity, can become one of the chief hopes of the Nation.

FEDERAL AID TO THE STATES TO EQUALIZE EDUCATIONAL OPPORTUNITY

Federal aid to education became a historic part of the American system before even the adoption of the Constitution, has been continued in a long succession of congressional grants to the States for agricultural, vocational, and higher education, and will be a further fulfillment of the great American tradition of Federal aid to the States for roads, agriculture, health, research, higher education, and social security. Failure to provide Federal aid now for the elementary and secondary schools is a failure of the American system to follow through for the most basic of all American institutions. Equal educational opportunity of the children who are to be citizens of both the States and the Nation is the main responsibility of our constitutional republic of States and people.

The emergency amount of $300,000,000, which was the amount spent annually on 300,000 young men in the CCC, is not an unreasonable amount to be spent toward the equalization of the educational opportunities of over 26,000,000 school children. The two main principles for the distribution of the Federal funds will be equitable distribution between the races and democratic distribution among the States according to the economic ability of the States and the number of children per adult population.

In three Southern States less than $40 per child was invested in public education, while in three States outside the South more than $120 per child was invested. A higher tax rate is required to provide the $40 per child in three States than is required to provide the $120 per child in the three other States. An economic, social, and cultural lag in any part of the country is an economic, social, and cultural damage to all parts of the country. Forty percent of the young people, 10 to 20 years old on farms in 1920, were in cities at the end of the decade. Sixty percent of this net migration was from southern rural areas.

While some regions are failing to reproduce their own population, the South has a 30-percent excess of births over deaths. The region with less than a third of the population has more than 50 percent of the excess of births over deaths in the Nation. A large proportion of the children who in their nonproductive years are supported and educated by rural people become in their economically creative years the producers in the vital industries and the citizens of the urban communities. Just as within the States, children in rural localities can have a fairer educational opportunity only through State aid to the localities, so children in the rural States can have a more equal educational opportunity only through Federal aid to the States.

The Federal Government is the only agency which can redress this economic and educational imbalance between the metropolitan areas of the greatest concentration of wealth and the rural areas of the greatest concentration of children per adult population. Three-fourths of the cost of public education is and will be carried by taxation of property, chiefly local.

For the most part taxation of agricultural property is taxation of the people on the farms where the tax is imposed. It cannot readily be shifted. Taxation of financial and industrial wealth, to an increasing extent in our integrated national industrial systems, is shifted to the consumers of the whole Nation. Since all sections, all resources, and all the people combine to produce the wealth concentrated in the great centers, and since all the people as consumers help pay the taxes on this wealth, comparatively it is just a tiny bit of the income from this wealth as Federal aid to public education should go back to the States whence it came and where are now the largest proportion of children whose equality and quality of education determine the future of democracy in America.

The South is proceeding on its part to spend more in proportion to its wealth on public education than any other American region, is proceeding to eliminate unfair discriminations in the salaries paid to Negro teachers, to eliminate the poll tax as a prerequisite to voting, to eliminate racial discriminations in the primaries, and to establish the principle of equal pay and upgrading for equal work, regardless of race, color, sex, or creed.

In North Carolina through university consolidation and interuniversity cooperation we are planning and patiently proceeding to develop one of the great university centers of the Nation. The South, also on its part, is asking for the elimination of freight-rate discriminations and for moderate Federal aid to the States for the elimination of educational inequalities in our democracy.

REGIONAL AND NATIONAL ISOLATION IMPOSSIBLE

The South and the Nation cannot be isolated from the example and teachings of New England. New England cannot be isolated from the markets and values of the South. Increased education can create new needs for goods, new desires and tastes in the South, which is potentially the richest undeveloped market in the Western Hemisphere. New England and the South and all America need more equal educational opportunities for all children north, south, east, and west, more markets, more jobs, regional, national and international intelligence and cooperation for the great tasks ahead.

In this modern dynamic world there is no isolation of race, color or creed, region, or nation. We cannot be isolated from our heritage and history, from the freedom which has made us what we are. We cannot be isolated from the woes and miseries of the conquered, stricken, and hungry peoples of the earth. We cannot be isolated from democracy, for democracy hurt anywhere in the world is democracy hurt everywhere in the world. We cannot be isolated from the air above, the seas around, or the lands beyond.

New England schools and colleges, mills, shops, and factories have had their part in the unprecedented military and naval organization and training of youth, and in the gigantic American production of war materials which tonight give dynamic power to the massive forward movements into Germany and across the far Pacific to the island gateways of Japan. In the name of our heroic dead we dedicate ourselves in this historic city of liberty to the unfinished work to win the war for human freedom, to guarantee more equality of opportunity, to provide jobs for all, and to help organize justice and peace in a world neighborhood of human brotherhood for all the peoples of the earth.

Editorial Tribute to Hon. Guy M. Gillette

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6 (legislative day of Monday, June 4), 1945

Mr. JOHNSON of Colorado. I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Washington Post of June 6 with reference to our former colleague, Guy M. Gillette.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMALL MIRACLE

Page Diogenes! We have at hand in the person of Guy M. Gillette, of Iowa, the very man whom the Greek cynic philosopher, lamp in hand, sought so assiduously and so hope-

lessly a couple of thousand years ago. Mr. Gillette has turned down a seat on the Federal bench, offered to him last week by President Truman, for the simple, incontrovertible and altogether extraordinary reason that he thinks he is not qualified to occupy it. Until he was defeated for reelection last year, he was a Member of Congress continuously since 1932, first in the House, later in the Senate. Prior to that, he was engaged, according to his biography in the Congressional Directory, in farming, and presumably has not done active legal work since he served as prosecuting attorney of Cherokee County, Iowa, from 1907 to 1909. When the President, as reported, suggested that he "brush up" on the law, Mr. Gillette is understood to have replied that a brief brush-up would not give him the legal background and experience necessary for a Federal judgeship.

Diffidence and humility are not common characteristics in public life. And, indeed, we are not at all sure that Mr. Gillette was manifesting them. It may be that he simply has an old-fashioned and peculiarly high regard for the status of the Federal bench—a respect for the traditions of the legal profession and for the sanctity of American justice which make him unusually exacting about appointments to our judiciary. Perhaps Mr. Gillette reasoned that, were he still a Senator, he would not vote for his own confirmation. We need more men like him in the Senate. His scruples and his candor afford ample justification for President Truman's desire to keep him in the public service in a position for which he feels he is truly fitted.

Presidential Succession Clarification Needed

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Portsmouth (Va.) Star of Saturday, May 12, entitled "Presidential Succession Clarification Needed":

PRESIDENTIAL SUCCESSION CLARIFICATION NEEDED

Former Postmaster General James A. Farley, speaking on Monday night last before businessmen at Hazleton, Pa., probably made a wise suggestion when he proposed the appointment of a commission to be composed of Members from both Houses of Congress, others to be appointed by the President, with at least one representative from the Supreme Court of the United States, to study and make recommendation of new law governing the Presidential succession in the case of death or incapacity of both the President and Vice President.

Under the twentieth amendment to the Constitution, commonly known as the Norris amendment, provision is attempted to be made for the choosing of a President in the case of the death of either a President-elect or both a President-elect and a Vice President-elect before inauguration.

Under law enacted by Congress in the Grover Cleveland administration the Presidential succession passes, in the event of the death or incapacity of the President or Vice President to the Secretary of State, and after him in series, to the Secretary of the Treasury, the Secretary of War, the Attorney General, the Postmaster General, the Secretary of the Navy, and finally to the Secretary of the Interior—because there had been no creation of the office of Secretaries of Agriculture, Commerce or Labor when the Presidential Succession Act became a law. Before this law was passed the President pro tempore of the United States Senate was in Presidential succession. To show how this was wrong, Senator Ben Wade, of Ohio, holding the position of President pro tempore of the Senate, actually voted for the conviction, under impeachment, of President Andrew Jackson, for removing a Cabinet officer, named by Lincoln, in alleged violation of law, the Ohioan hoping at the time that he (Wade) would by Johnson's conviction become President. But President Johnson was acquitted, though only by a single vote of the Senate sitting as a trial court.

Mr. Farley in his address urging the naming of a commission to study and make recommendation on the question of new Presidential succession law, pointed out that to leave the law as it stands today even permits the possibility of a Vice President succeeding to the Presidency, with power to name his potential successor through appointment of a Secretary of State of personal choice, subject, of course, to Senate confirmation.

Mr. Farley calls this "short circuiting" of the electorate with a "gap in our democratic procedure that we have not yet solved." The comment is not out of place, and furnishes good reason for the adoption of the former Democratic National Chairman's proposal for a commission to revise present law on the subject of Presidential succession.

On the subject of the Congress providing for the naming of a President, especially in the event of death of both President and Vice President prior to inauguration, Mr. Farley correctly points to possible confusion. Only 17 days elapses between the convening of a newly elected House of Representatives and date set by law for inauguration of the President and Vice President. Close political division in membership of the House-elect could conceivably tie up organization of that body for an unlimited time and there might thus come a condition of affairs whereby the country would have no Chief Executive until the deadlock was broken.

It has long been understood how the original Constitution provides for the election of a President directly by the House of Representatives provided the electoral college fails to elect by majority vote, for this happened in the case of President John Quincy Adams early in the last century, but that section of the twentieth amendment on Presidential succession appears confusing when it says:

"If, at the time fixed for the beginning of the term of the President, the President-elect shall have died, the Vice President-elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President-elect shall have failed to qualify, then the Vice President-elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President-elect nor a Vice President-elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President-elect shall have qualified.

"The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon them."

Certainly after reading this, which Mr. Farley did not directly quote in his Hazleton speech on Monday, it would seem that there comes much justification in the suggestion that a commission on Presidential succession might unravel some of the existing confusion, and provide a law of clarification and more simple understanding than existing statutes give us.

Dachau Concentration Camp

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter Mr. Max Abelman, secretary to the board of the Brooklyn Jewish Hospital, received from Maj. Theodore Barnett, former resident physician of that hospital:

KONZENTRATIONSLAGER DACHAU,

Fernsprecher, Dachau 293, May 3, 1945.

From the letterhead, which comes from the desk of the ex-commanding officer of this place, you can see that I have visited the most notorious of all concentration camps at Dachau—a place that must be forever remembered for its utter infamy. I am going to try to tell you something of what I have seen, not because I want to terrify or nauseate you but because I feel that everyone must be told what kind of people these Nazis really are. Since I couldn't possibly write this description more than once, I am going to ask you to show it to everyone you possibly can. All Americans must be told what inhuman beasts the Germans have become and anyone who has any idea of gentle treatment for our defeated foe must be forced to change their mind.

I have had to let my blood cool and my anger subside before I could even start to put a word on paper. Dachau is the first of the concentration camps and was used for political prisoners—German, Russian, Polish, etc. We approached it on a beautiful highway and just before the entrance is a sign that is a classic. It shows two smiling, gay peasants playing on an accordion being led into the camp. What irony.

When one gets into the area it looks like a group of hospital buildings, but about a half mile beyond, out of sight, the "place" begins. It is a completely walled-in enclosure extending for several thousand yards and is divided into two large compartments by a concrete moat. On one side are the barracks for the inmates, on the other side the murdering devices. The entire area is also fenced in with barbed wire which is electrically charged and the place bristles with concrete pill boxes.

We first inspected the area where the poor unfortunates are housed. There are still thousands and thousands of them there, miserably nourished and diseased. The wooden barracks are primitive, cold, and completely unsanitary. The saddest sight we saw was a group of Jewish boys, 10 to 14 years old, in terrible shape. They were used by the camp commander and other personnel of the camp for homosexual and sadistic purposes. At least these people were still alive and although their present behavior is more animal than human, we are moving hospitals nearby and perhaps can restore health to some of them.

Then we crossed the moat and saw the murder section. Here I saw things that I couldn't believe even after I saw them. First, there were the dog kennels, where huge animals were starved and then turned loose amongst

the prisoners. Then a huge pit full of charred human bones, where prisoners were made to squat along the edge of the pit, and then were shot, tumbled into the pit and burned. Gallows were strewn carelessly around. Then for the masterpiece, a large brick building that served as a gas chamber and incinerator. First, the prisoners were taken to a shower room, presumably because it was easier for the gas to be absorbed after the dirt was removed. In the shower room was a sign, "Cleanliness is next to Godliness." From the shower they were taken to a gas chamber where masses of human beings were herded and systematically gassed to death. From here they were taken to huge ovens where the bodies were incinerated. When the Americans arrived, they were in the midst of their gruesome work, and we saw hundreds and hundreds of bodies waiting to be burned. It was the most horrible thing I have ever seen. Besides these measures, which at least ended in the surcease of death, they had professional torturers who performed odd jobs with lashes, hot irons, etc. I took many pictures, and whenever someone begins talking of so-called good Germans, I'll show my wares. The delegates to the Peace Conference should all be brought to Dachau and then perhaps Germany will be given the type of peace terms she so justly deserves.

We talked to many prisoners, and their stories are simply fantastic. The coup-de-grace was our visit to the place where the high officials of the camp were being detained. They appeared more cruel looking and sadistic than I possibly could have pictured them.

The place was swarming with correspondents and photographers, so perhaps the total picture will be painted much better than I have done. It is a story that the world must know about. A major general was making an inspection tour as I was taking pictures, and he said, "Good work, Major; show them to all the people back home, and then perhaps they will know how to treat Germany."

Maj. THEODORE BARNETT, M. D.

Hon. Frances Perkins

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malvina Lindsay from the Washington Post of June 6, 1945:

SERVING THE PUBLIC

(By Malvina Lindsay)

MADAM SECRETARY

The next woman member of the Cabinet will find the going easier because of the 12 years of punishment Frances Perkins so gallantly has taken. The trail has been blazed and the perspective of time will reveal the contribution the first woman Secretary of Labor has made in expanding democracy economically and socially. Also, as in the case of Woodrow Wilson, the lesson of warning will be there—that in a republic the practice of successful human relationships is an essential part of statesmanship.

No public official has ever suffered more misunderstanding and abuse than Secretary Perkins. She has been lambasted both as a dangerous radical and a stubborn reactionary. She has been blamed for every strike and labor dispute, though the functions of her office did not include such responsibility. Because she had the good sense to stick to a becoming style of hat, her headgear has been ridiculed and cartooned. She has been badgered at congressional committee inquisitions. The public, the press, Congress frequently have made her their whipping boy. To all this she has paid no attention, made no defense. She placed her resignation periodically on the President's desk, and when it was not accepted kept on sawing wood.

Tough job

Secretary Perkins took office with many strikes against her. In taking over a masculine stronghold, she faced the usual prejudices and suspicions—particularly the legend that no woman can be a good administrator. Organized labor resented not having one of its own men named to the post. The Nation was in economic upheaval, a war with attendant strikes lay ahead. The public generally had a misconception of her duties and powers, which under the 1913 act that established her Department were "to foster, promote, and develop the welfare of wage earners of the United States"—not to prevent their strikes.

Also she was unfitted by background and temperament for the human side of politics. Inevitably the first woman Cabinet member was news. But the new Secretary came from an ultraconservative New England family. She was innately reserved, had a horror of publicity, was adamant against having her private life given public attention. She would not pose for the traditional photograph of the woman official whipping up a cake in her kitchenette, nor give interviews on the best methods to bake beans or bring up children.

This would not have mattered greatly even to a sociable and folksy citizenry. But more unfortunately, the first woman Secretary lacked the talent for bridging the gulf between herself and people in her public life. She consistently had bad press relations. Consequently, her aims, program, and achievements were not interpreted to the people to the extent they might have been. This reserve also handicapped her relations with certain Congressmen, labor leaders, political associates. Being an intellectual, she inevitably attracted the epithet "cold," and her own social restraint further awed those inherently suspicious of "brainy" women.

Glad-hand tradition

But why, it might be asked, should a public official be expected to bow to the tradition of glad-handing and back-slapping? Was not Secretary Perkins entitled to her aloofness (shyness, her friends call it) and her private life? No one can deny the right of an official to abjure cheap popular appeal and to be true to his own nature. But skill in human relations can be acquired, to an extent at least, and in a democratic government is highly essential. In a sense, it is the essence of democracy for it rests on a recognition of the importance of the individual personality. Secretary Perkins, for all her deep passion for individual liberty and concern for the welfare of human beings, seemed unable to translate her feeling for people in the mass to the individual when she faced him.

True, she will stand in the future on her achievements. "I'll let history judge my record," she has told her friends who repeatedly have begged her to defend herself against false accusations. Her admirers maintain she will be rated as one of the great Cabinet officials, that her ideas have been responsible for most of the social legislation of the last 12 years. Certainly her dignity and courage on the firing line will always be proudly remembered by her sex. But even so, her own way would have been much easier, her achievements possibly greater, had she been able to bring out in herself more of the common touch. Strangely, those with the most to contribute to democratic government often leave this technique entirely to the two-penny politicians.

Revision of the Laws of the United States

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. KEOGH. Mr. Speaker, a of interest to those students of the legislative procedure and in view of the cooperation that the Committee on Revision of the Laws has received from the leadership and membership of the House, I thought it would be appropriate to insert the following report filed in the House of Representatives during the first session of the Thirtieth Congress, dated June 14, 1848.

The report is as follows:

[30th Cong., 1st sess. Rept. No. 671, to accompany bill H. R. 535]

REVISION OF THE LAWS OF THE UNITED STATES

Mr. Joseph R. Ingersoll, from the Committee on the Judiciary, made the following report:

Writers on the principles of government have suggested the propriety of revising, at certain definite periods, the prevailing system of laws. They advise that such a revision should be provided for by fundamental or organic arrangement. They also recommend that this original and constitutional provision should not only be inherent and obligatory in its character but self-operative in practice. By making it the duty of certain established officers to carry out, at the end of precise and brief terms, the intention of the fundamental law, without new or additional legislation, the Nation would almost unconsciously glide into the correction of abuses, and the substitution of improved enactments in place of those which experience may have proved to be defective or inapplicable. In the absence of standing regulations, occasional ones must sometimes be resorted to. It can scarcely be supposed that relief of this nature should not sometimes be required. The wants of all communities are expansive; it is impossible to anticipate either the extent or peculiarities of them. In providing for them, from time to time, legislation often becomes complex and irregular. Laws are enacted under the pressure of momentary emergency; if not inconsistent, they are obscure; sometimes involved in statutes dissimilar in title and object and always scattered over different parts of a broad surface, in the numerous hiding places of which they are concealed.

These evils are, as it were, necessary incidents of legislation. They can scarcely fail to exist and to be numerous, even where great care is bestowed upon the machinery, and the workings of it, of parliamentary proceedings. In a country which, like England, has in one branch a permanent set of members, who terminate their career only with their lives, and, in the other, many representatives who, during a long career, keep a steady eye upon the science of legislation, and thence acquire something like proficiency in it as an art, a better chance exists that great errors may be avoided. Yet we are told of strange irregularities among hereditary legislators, notwithstanding all the advantage of having a high law officer of the crown, with munificent endowments, to prepare the laws. A statute is said, not many years since, to have passed through all the forms by which the penalty of transportation was awarded half to the king and the other half to the informer. Among ourselves the danger of vicious or clumsy legislation, from inadvertence and inexperience,

is far more considerable. Few persons among us do more than turn aside, occasionally from other vocations, to pursue the vocation of lawmakers. Fewer still devote to that vocation the study of their lives. The particular duty of drafting statutes, or examining them after they have been drawn, devolves on nobody. Skill is seldom acquired by experience, which is its ablest teacher. Each individual, without any especial familiarity with the rules of parliamentary law, and without any official duty or experience, prepares the statute which he desires to submit, and it is passed or rejected without any particular reference to its terms, or correction of its ambiguity.

Besides the danger of imperfect phraseology, other evils are developed in the progress of time. Alterations are made as the particular exigency requires. These alterations are sometimes accompanied by an ad referendum clause, and the former legislation is not easy of access, either from not being clearly pointed out, or from a succession of references, which become multiplied and intricate.

Sometimes an important ingredient in a general or comprehensive topic is inserted in the midst of irrelative and incongruous matter, and presents itself to view only or probably by accident, there being no known clue to its discovery. A leading provision of the naturalization laws, which requires that a party who intends to become a citizen shall not only have a legal residence but never personally depart from the United States during his term of probation, is found in the sixth section of an act for the regulation of seamen.

Enactments defining the duties of a particular office should naturally be so united as to furnish all needful information in one comprehensive body. That which seems to be complete in its enumeration should be so in reality. Yet a single officer, the Register of the Treasury, whose office is of comparatively recent creation, is obliged to search for a knowledge of what is prescribed to him through more than a hundred statutes.

If in the course of nearly 60 years even contradictory enactments should be found, it would not be matter of surprise, although neither be designed to repeal or supersede another. But without positive interference there may readily be unnecessary repetition, with great peril of such differences as prevent an easy ascertainment of the more appropriate and complete remedy among several of them for a given evil. Both the evil and the remedy may be obsolete, and everything that relates to them may well be taken from the statute book together.

It not infrequently occurs that mischiefs are perceived for a course of years which require legislation, and yet they are not brought into view in the proper place, because they have not presented themselves to those whose especial business it is to correct them. A careful revision brings them up to notice. In reviewing an entire system, faults that mar its beauty are necessarily observed. Omissions which under other circumstances would escape attention become apparent. Symmetry and order are the result of such an entire examination. Deficiencies are supplied, redundancies excluded, errors corrected, similar subjects brought together, improvements made, and the whole arranged in harmony.

One of the mischiefs that have been complained of is that of intricacy in the combination and separation of laws in pari materia. The mischief is imputed in part to a multiplication of clauses of reference and repeal. It frequently occurs that even the number of references and partial repeals does not present the chief inconvenience. If on each occasion of reference specific mention were made of the thing alluded to, the difficulties, however considerable, might be overcome. Patient labor could trace repeals through all their complexities. Although the task might be difficult, it would not be impracticable. Few might be willing to take up the burden, but none would be absolutely deterred by the absolute hopelessness of the effort. The difficulty assumes its most formidable shape when it furnishes no aid whatever to inquiry and research. Statutes, for example, are passed concluding with words so indefinite as these: All acts and parts of acts repugnant to the provisions of this act are hereby repealed.

Among the States occasional revisions of the laws are resorted to. The time has arrived when a similar proceeding has become eminently proper on the part of the General Government. The Committee on the Judiciary accordingly report a bill.

Meat Situation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. PATMAN. Mr. Speaker, the meat situation has caused us all great concern. Much of the trouble has been caused by reason by the fact that so few packers were federally inspected establishments and therefore the Government, in procuring its necessary needs for the armed services, was compelled to obtain such a large percentage of its meat from the comparatively few federally inspected plants.

The Honorable Marvin Jones, War Food Administrator, has known about this bottleneck for some time and has been endeavoring to straighten it out by enticing into Federal inspection as many of the slaughtering places as possible.

I am inserting herewith a letter I have just received from Administrator Marvin Jones on this subject, and also a statement from Mr. Clarkson, of the Meat Inspection Division, relating to the progress that has been made in this direction:

WAR FOOD ADMINISTRATION,
Washington, June 5, 1945.

Hon. WRIGHT PATMAN,
House of Representatives.

DEAR WRIGHT: In further reference to your inquiry about our efforts to increase the number of packers and slaughterers who accept Federal inspection under the liberalized wartime legislation, I enclose herewith a memorandum which has been prepared in the Meat Inspection Division of the Livestock and Meats Branch

You will note that the number of such establishments has been greatly increased during the last few months and that the percentage of Federal slaughter to total slaughter now averages above 70 percent.

You will understand that most of the large establishments are now under Federal inspection and that many of those outside are local butchers or very small establishments.

However, there are a number of other concerns which we feel should come in for the duration of the emergency, and we are making every effort to get them to do so.

The Army is cooperating. We have assured the various packers and slaughterers that it is desirable that they should come under Federal inspection under the liberalized provision during the war period.

The only requirement is that the animals slaughtered be not diseased and that the meat be slaughtered under sanitary conditions that assure that it is wholesome.

Sincerely yours,

MARVIN JONES,
Administrator.

JUNE 2, 1945.

To: The War Food Administrator.

From: M. R. Clarkson, Acting Chief, Meat Inspection Division, through S. R. Newell, Chief, Livestock and Meats Branch, OMS.

Subject: Expansion of Federal meat inspection.

To meet the steadily increasing demand for federally inspected meat for the armed forces and other Federal agencies, the Meat Inspection Service has put into effect a program of expansion which has made the inspection available to a great many of the larger intrastate meat packing plants. These are the plants which are not compelled to have Federal inspection because, in each case, their business is confined within the borders of a single State. This expansion has increased the number of federally inspected establishments from 656, of which 300 conducted slaughtering, before the emergency, to 1,027, of which 531 conduct slaughtering, as of June 1, 1945.

During the calendar year 1944, the slaughter of animals under Federal inspection compared with the estimated total slaughter as follows:

	Total slaughter	Federal slaughter	Federal slaughter, percent of total
Cattle	19,652,000	13,960,000	71.04
Calves	14,307,000	7,770,000	54.31
Sheep	24,420,000	21,876,000	89.58
Swine	97,352,000	69,017,000	70.89
Total	155,731,000	112,623,000	72.32

Requests for inspection are referred to the inspector in charge of the field station in the area where the applicant's plant is located. The inspector makes a survey of the plant to determine the sanitary condition of the buildings and acceptability of the water supply, sewage disposal, equipment, and facilities for proper handling of product and conduct of the inspection. The requirements have been modified to meet the present situation, maintaining, however, the essential sanitary necessities. When adjustments are necessary, the inspector assists the owner to work out an acceptable arrangement. Inspection is granted when the inspector finds the plant to be in suitable condition.

Within the last month, to facilitate the handling of applications for plants that can supply meat to the Army, an arrangement has been made with the Army Quartermaster Corps whereby meat-inspection representatives in various sections of the country accompany officers of the Quartermaster Corps calling upon the owners of slaughtering plants which might supply meat to the Army. In this way it is possible for the owner to have settled immediately questions pertaining to the inspection, as well as Army procurement. He is able then to decide whether he wishes to obtain the inspection and participate in the production of meat for the Army.

At the present time, more than 40 requests for inspection are being received monthly. During May, inspection was inaugurated at 23 plants. Of these, 13 conduct slaughtering and 9 others are engaged primarily in preparing boneless, three-way beef for the Army.

M. R. CLARKSON.

Authority Over Food Should Be Removed From the Office of Economic Stabilization and From the OPA

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. JENKINS. Mr. Speaker, the Republican congressional food-study committee strongly recommends that all authority over food be removed from the Office of Economic Stabilization now presided over by William H. Davis, former Chairman of the War Labor Board.

If the President really means to put the food activities of the Nation under one agency and then hold that agency responsible, he must not only take authority over food from the Office of Economic Stabilization but must also transfer over to the Department of Agriculture the authority now exercised over food by the OPA under Chester Bowles.

One of the principal bottlenecks in the food administration at this time is the Office of Economic Stabilization. This is strongly evidenced by the fact that disputes which arose many months ago between the War Food Administration and the OPA have not been decided and are still pending in the Office of Economic Stabilization.

Many of these disputes relate to canned fruits and vegetables. While the general canning season for 1945 is now well under way, the 1945 price policy, under which canners must operate, has not yet been fully established.

It is well known that the Republican congressional food-study committee has maintained for the past 2 years that the best way to settle problems of food price and food distribution is to encourage sufficient production to meet all demands. The new Secretary of Agriculture should be charged with this responsibility and should be given the necessary authority.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. LINK. Mr. Speaker, Bretton Woods—magic words. Magic, because they are the symbol of peace. Bretton Woods agreements, when adopted by all nations, will be the cornerstone of a just and lasting peace.

Nearly all wars in the past have been caused by nations vying with each other for world trade. Yes, even the cause of our Revolutionary War was England's attempt to force the American Colonies to trade with her only. The manipulation of money values by international money lenders could and did shut out the competition from any nation at their will.

Germany, for instance, after the First World War, manipulated her money values so skillfully that no nation could compete with her. By devaluating her money and keeping it within her own borders, she built the most powerful war machine in history. Then, using her power as a threat, she forced the weaker nations around her to sell their goods to her at her money value, and buy her goods at their money value. The high Smoot-Hawley tariff in our country prevented nations from selling to us, therefore, their choice of markets was very limited, except as dictated by Germany. Consequently, our exports dropped to nil, and the great depression swept over the world, except in Germany, and she grew stronger and stronger each year. Finally, Germany felt so strong, that she set out to conquer the world, and came much closer to doing it than we dare to admit. During this time, Japan worked hand in hand with Germany. Now, if the monetary policy as outlined in the Bretton Woods agreements had already been in use by all nations of the world, Germany could not have manipulated her currency, because all money values would be guaranteed by all the nations under the Bretton Woods agreements, and Germany could not have grown to be the threat she proved to be to the world.

Dumbarton Oaks, which aims to be a world-security organization, will have a much better chance to succeed, if the Bretton Woods agreements are adopted, for then the primary reason for wars will be eliminated. When nations will know what their currency will be worth today, tomorrow, or next week or month, they will be in a much better position to carry on trade between themselves, they will be much more friendly toward each other, they will learn to trust each other, and, I repeat, the chief reason for war will be eliminated. They will not have to work in secret, but will be able to come out in the sun.

Truly, Bretton Woods is the cornerstone of a lasting peace.

Postwar Development of Natural Resources of California

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. HAVENNER. Mr. Speaker, the San Francisco Labor Council and the San Francisco Building and Construction Trades Council, which are composed of unions affiliated with the American Federation of Labor, have jointly adopted the following resolution:

Whereas various private and public agencies are now engaged in formulating plans for the postwar development of California land, water, power, and other natural resources, some of which plans are inadequate or designed to serve special interests, and the sum of which represents duplication of effort and results in public confusion; and

Whereas the future welfare and prosperity of the people of California depend largely upon the manner in which we conserve and develop our basic natural resources; and

Whereas the proposed construction of the necessary dams, canals, power plants, and other works not only will provide immediate peacetime employment, but such works will make available the basic resources on which later we can build and expand our economy by creating permanent homes, industries, and communities; and

Whereas if the people of California are to derive the maximum benefit from the development of these resources such works must be constructed and operated under a unified, articulated, and comprehensive plan on an over-all, region-wide basis; and

Whereas water development projects should give full consideration to all possible beneficial uses and purposes, including irrigation, domestic, and industrial water supply, navigation, flood control, production of electric energy, maintenance and development of fish and wildlife resources, salinity control, recreation, and other uses, each accorded its relative importance; and

Whereas the program of the Bureau of Reclamation is designed to foster the maximum number of resident-owned and operated farms, prevent the spread of land monopoly and land speculation, and provide the widest possible opportunity for mustered-out servicemen and ex-war workers seeking California farm homes; and

Whereas when electric power is developed through the expenditure of public funds, Californians should enjoy the lowest possible rates, and under the Bureau of Reclamation's program for the distribution of public power, preference is given to municipalities, cooperatives, and other public agencies, thus resulting in lower consumer rates; and

Whereas the program of the Bureau of Reclamation is based on full recognition of all State water laws and rights established thereunder; and

Whereas the policies and programs of the Bureau of Reclamation for the development of these valuable resources give to water and power users the advantages, through Federal financial assistance, of low-rate and interest-free money, and at the same time, comply with the aforesaid policies for resource development; and

Whereas under the reclamation laws the costs of these public works are largely repaid to the Government through the sale of water and power, rather than charged against the general taxpayer: Now, therefore, be it

Resolved by the A. F. of L. postwar planning committee of San Francisco in regular session assembled this 8th day of May 1945, That it deplores the multiplicity of conflicting and haphazard plans and efforts and urges the adoption of the time-tested, orderly and economically sound program of the United States Bureau of Reclamation for the development of our land, water, and power resources, and that we respectfully urge that the California Representatives in Congress and other public officials be requested to give their full endorsement of and active support to the comprehensive program; and be it further

Resolved, That copies of this resolution be forwarded to the departments of the Government.

(Adopted by the San Francisco Labor Council and the San Francisco Building and Construction Trades Council, May 1945.)

Doctors in Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following letter from a doctor friend of many years. For obvious reasons it is advisable to omit identifying names or places.

UNITED STATES VETERANS' HOSPITAL.

DEAR WALTER: I noted your statement about lay control of veterans' hospitals in the AMA this week, and knowing you and having worked for VA for more than 10 years, wish to commend you for your special interest in us doctors. All the doctors here are encouraged to know that somebody is trying to do something about it. More power to you, and let me know if I can give you any inside information. I was at ———— ———— several years. Went to ———— ———— on promotion as chief of medicine several years and then have been here several years.

Politics, both Legion and party, dominates the situation. We have managers with their assistants and staff, all laymen, who draw the big salaries and make all the important—including medical—decisions. They all have secretaries, etc., at their command, but the doctors can write out their reports in longhand and there are regulations galore even telling them much of what to write. Of course, there are doctors, too, that know Senators who get them assignments and promotions irrespective of knowledge or ability. It seems hopeless to expect that Congressmen would create a medical corps that would take away from them the privilege of doing things for their special friends.

As to work, we are handled as help. The incompetent are assigned trivial tasks and no effective effort is ever made to eliminate them. And there are plenty of them. Civil service created a 48-hour work week with compensatory overtime. Doctors here average 60 hours a week, with 48 hours pay. One 28-hour officer-of-the-day stretch once a week accounts for our overtime.

I could write pages. I have no personal gripes or wants. I like institutional work and plan to stay with it. But if we are expected to do first-class medicine, drastic changes must be made.

Again, please allow me to commend you on your activity in our behalf. I have been keenly interested but have never taken the time to write.

More power to you.

Confidentially yours,

———— ————.

The Underlying Force

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sunday World-Herald, Omaha, Nebr., of April 29, 1945:

THE UNDERLYING FORCE

"So far as our domestic affairs are concerned the problem of our return to peace is a problem of economic and industrial readjustment. * * * Our people do not wait to be coached and led. They know their own business, are quick and resourceful at every readjustment, definite in purpose and self-reliant in action. Any leading strings we might seek to put them in would become hopelessly tangled because they would pay no attention to them and go their own way. All that we can do as their legislative and executive servants is to mediate the process of change here, there and elsewhere as we may. I have heard much counsel as to the plans that should be forced and personally conducted to a happy consummation, but from no quarter have I seen any general scheme of 'reconstruction' emerge which I thought it likely we could force our spirited businessmen and self-reliant laborers to accept with due pliancy and obedience."

Thus spoke President Woodrow Wilson in his message to Congress in 1918, just a few weeks after the end of World War I.

Quoting this great leader of American liberalism, James A. Farley said the other day, in a speech at Milwaukee:

"We could demonstrate no greater attachment to Americanism than to lend our support to that Wilsonian doctrine at the conclusion of this war. That does not mean that every wartime control should be dropped when the final gun is fired. Our economic system has been too greatly dislocated for that. But it does mean that relaxation of controls should be rapid and clean-cut * * * Our freedom in peace has been our strength in war * * * We have fought wars and are fighting this one only to preserve freedom. We have all given up great measures of freedom to achieve victory. We should let no one forget for a minute that we want those freedoms back and we intend to have them."

It is timely in this connection to quote the words of another true democrat:

"I believe in individual initiative. The profit motive of our economic system, I think, is incomparably superior to any other system the world has known. Certainly we do not want any part of the fear motive of the National Socialist states. But the profit motive does lead in some cases to excesses which cause difficulties."

"At the end of the war we will have the factories, the tools, the labor supply, the materials and the processes of manufacture on which we can found the world's greatest prosperity. * * * We must not regiment business, because to do so will stifle progress. But business cannot be operated on a public-be-damned policy. Business must display statesmanship and operate in the public interest as well as its own selfish interest."

This is what Senator Harry S. Truman, of Missouri, said, speaking in 1942 and 1943.

He is now President Truman.

At the beginning of an era when the freedom of democracy must meet the challenge of communistic regimentation it is good to know that a man believing as Harry Truman believes—as Woodrow Wilson believed—as true democrats everywhere believe—is prepared to accept that challenge in behalf of the American people.

Other peoples are entitled to their own political and economic creeds, to their own philosophy and form of government. Whatever these may be we shall plan and hope to get along amicably with those who accept them, to cooperate with them heartily in the cause of peace. But the philosophy of communism or of fascism, government by regimentation imposed from above—these are not for us. For, as Farley says: "Freedom is the very breath of America, its very life. It is the underlying force, the inner power, the spirit which is singular to our Nation."

Stalin and the Allies

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. MASON. Mr. Speaker, officially Russia is now at peace with the rest of the world. We are told that Russia has suffered the loss of 15,000,000 men killed in this war. We all acknowledge that she did her full part in the war against Germany. The great question in the minds of the Allied Nations today is, "Will Russia do her full part to establish an effective world peace organization?"

We can only judge the future by the past. Every move Stalin has made since the war in Europe first started has been made entirely from a nationalistic standpoint. Stalin has never lost sight of Russia's interests and has never failed to keep them uppermost in mind. From the time he teamed up with Hitler to invade Poland until this present moment every move he has made has been in the interest of Russia. His invasion and later absorption of Estonia, Latvia, Lithuania, and the eastern part of Poland are clear evidences of his materialistic aims and objectives. He has succeeded in establishing communistic minorities in Roumania, Bulgaria, Yugoslavia, Hungary, and Austria, setting up puppet governments in each of these countries to do the will of, and be subservient to, the Soviet Union. His exclusion of American newsmen and American officials from countries and territories that Russia has "liberated(?)" cannot be justified now that an enemy no longer exists. This situation is bound to engender suspicion concerning his future policies.

Russia has emerged from this war more nationalistic than ever. She is more nationalistic today than the United States was in 1919 when the Senate refused to ratify the League of Nations Treaty. Stalin is the one person who insists upon retaining the "hidden veto power" in the Dumbarton Oaks peace set-up. He does this so that Russia may continue to have a free hand in the world of the future. His unilateral actions since Yalta, affecting Roumania, Yugoslavia, Austria, Poland, and Turkey—in direct violation of the Yalta big three agreements—proved to be the greatest stumbling blocks at San Francisco to the formation of a world peace organization. Stalin does not waste time talking about his aims and objectives; he acts to accomplish them without regard for the wishes of others. He still believes that might makes right, and acts in accordance with that belief.

The future of Europe and the success of a world peace organization rest very largely in Stalin's hands. What this future will be can be judged by what he did to Latvia, Estonia, Lithuania, and Poland, where the people who objected to Stalin's program of supervision and domination were "reported, deported, and liquidated." Judging the future by the

past, what can we expect from Russia? What will Stalin do next?

Mr. Speaker, under leave to extend my remarks I include an editorial from the Washington Times-Herald of June 5, 1945, entitled "Russian Policy in Germany":

RUSSIAN POLICY IN GERMANY

Senator RALPH O. BREWSTER, Republican, of Maine, toured American and British occupied areas of Europe recently, with the Mead Committee on War Expenditures, and is now back home telling a few of the things he heard and saw on the trip.

Senator BREWSTER says he heard on high authority in London and Paris that the Russians are liquidating the upper crust of professional people in the Russian-occupied part of Germany, while buddying up to the working people. BREWSTER gathered that German lawyers, engineers, businessmen, and other professional people are being done away with, though the doctors and dentists have not as yet been molested.

If the report about the doctors and dentists is true, the Bolsheviks nowadays are smarter than they were in the revolution in Russia led by Nicolai Lenin. In that affair the Reds liquidated the Russian doctors along with the rest of Russia's wealthy and middle classes, with the result that Russia had practically no medical profesison for 15 or 20 years after and hasn't a first-class one yet.

LIQUIDATIONS IN GERMANY

This report of the communizing of eastern Germany is not surprising. It is the less surprising in view of the fact that the Russians, up to Eisenhower's Berlin conference this week, have kept Allied representatives and observers out of Russia's part of Germany. The Mead committee couldn't get in and look around; neither could newspaper correspondents.

Though the report persists that American troops could have taken Berlin before the Russians got there, our forces stopped on the Elbe River. They also stopped outside Prague, capital of Czechoslovakia, and let the Russians move in. This, though our air forces had done the bulk of the softening up of both Berlin and Prague with bombs.

These maneuvers are believed to have been one of the things the late President Roosewelt let us in for in his conversations at Yalta with Churchill and Stalin. The general agreement is understood to have been that Britain, France, Russia, and the United States would share in the management of postwar Germany.

Russia is now, according to Brewster's and other reports, busily communizing its part of Germany. It is also communizing the rest of eastern Europe—Poland, Finland, the Baltic States, Bulgaria, Romania, Yugoslavia—and seems determined to communize all Europe if it can.

British Prime Minister Winston Churchill is already visible and audibly disturbed over these developments. He is making remarks which seem to foreshadow a British turn against Russia, as the latest dominant power on the European continent. To any war which such a turn might produce, the United States, it seems almost needless to say, would be urgently invited by the British.

What is the significance of it all for Americans?

We have now gone to two of these European conflicts, to fight for various high ideals. We have not realized the high ideals, but we have realized the deaths of a lot of young men on both occasions, and the maiming of many more.

Our casualties in World War II have now topped 1,000,000. A large percentage of these were incurred in Europe, so that Stalin might proceed to communize most or all of Europe.

NO FIGHT RUSSIA

The moral of it is: No fight Russia, at anybody's urging or for any reason, unless Russia sometime attacks us. In that case, we should fight to the limit.

If we should attack Russia, we could not defeat it. Napoleon couldn't, and Hitler couldn't.

Russia, on the other hand, could probably not defeat us, if we were ready to meet any attack it might launch against us. Such readiness would involve our having the world's most powerful navy and air force after this war, plus a highly trained skeleton Army swiftly expandible to war strength from a reserve of young men who had learned the elements of warfare under a system of universal military training.

The American Council on Education, polling college presidents on this latter subject, finds that about 75 percent of them are against deciding the universal military training question before the end of the war. These gentlemen, of course, are voting in their own interest, as they would rather have the young men in the colleges than in the camps.

As for the rest of us, we had better become isolationists as far as Russia is concerned, by resolving not to fight Russia unless Russia starts a fight with us, and by keeping our defenses strong from now on.

It turns out that we fought the German war for Russia's ideas and ideals. There should be at least a decent interval of time before we turn around and begin to fight against Russia's ideas and ideals.

Duquesne University Honors Congressman Samuel A. Weiss

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. KELLEY of Pennsylvania. Mr. Speaker, my colleague, SAMUEL A. WEISS, known as SAMMY WEISS to the sporting world, graduated from Duquesne University Law School in 1927. While attending Duquesne, he was captain of its football and baseball teams, and president of its student association. He began practicing law in 1927 and soon earned a reputation before his county bar as an able advocate and a lawyer of unquestionable integrity. He was elected to the Pennsylvania Legislature in 1934, and reelected in 1936, where he established the reputation of being one of its outstanding members. He was the author of the new election code and many other worthwhile reforms. He gained State-wide reputation as the author of the Weiss liberal workmen's compensation law that paid widows and workmen for life and brought Pennsylvania from thirty-seventh to fourth in rank in the Nation with respect to liberal compensation payments.

Sammy was elected to the United States Congress in 1940 and reelected in 1942, and again in 1944. He has become the sports champion in Washington, informing the Nation of the great value of competitive sports in time of war. He is also one of the Nation's outstanding football officials, being a referee in the National Professional Football League.

Congressman WEISS is a proven friend of the working men and women of America, always opposing restrictive and repressive antilabor measures. He is a champion for GI Joe, being the author of the bill giving soldiers, sailors, and marines free postage; he is the author of the Ernie Pyle bill to give combat pay to fighting and combat infantrymen. He fought for the GI bill of rights and many other veterans measures.

Sammy is an honored member of the directors of Roselia Foundling Hospital of Pittsburgh; and he is a member of the athletic council of his alma mater, Duquesne University.

Duquesne University is proud of Congressman SAMUEL A. WEISS. At its sixty-seventh annual graduation exercises on Sunday, June 3, 1945, at Soldiers and Sailors Memorial Hall, Pittsburgh, Pa., Duquesne University, a great institution, presented its outstanding meritorious alumni service award to Congressman WEISS. We, his colleagues in the House, join in hearty approval of this signal honor to one so deserving, and we commend the university for its selection.

As part of my remarks I am happy to include the acceptance speech of my distinguished colleague, Mr. WEISS, delivered at the graduation exercises:

His Excellency, Bishop Boyle, the Very Reverend Father Kirk, members of the clergy, honored guests, members of the class, and fellow Americans:

To say that I am deeply privileged to receive this award sounds like a platitude. Yet I am fully aware of the honor you have accorded me, and I want you to know that I am grateful—and also very proud—to receive your alumni meritorious service award in the company of such distinguished Americans as the Honorable Leo Crowley, the Honorable Philip Murray, Father Hyland, who are honored today by my alma mater.

Duquesne University is my school. Here I learned science and law—and something of football, too. My teachers and my books taught me a great deal, but the most valuable lesson of all came from the spirit that pervades this university and its student body, the spirit of democratic living, of fair play and teamwork that was found in the classrooms as well as on the ball fields. It was the Duke of Wellington who said that, "The Battle of Waterloo was won on the playing fields of Eton." The battle for American democracy is won in schools like Duquesne. What better example than here today? Duquesne University—a great American university which is Catholic—honoring an American of the Jewish faith. This is democracy at work. This is the democracy we are today fighting to preserve.

Millions of the world's best manhood have died in this gigantic Global War. Millions will suffer because of the basic failure of ruthless tyrants to recognize the worth of each individual. Instead, they and their bestial hordes judge a man on his origin, or religion. These same fanatics adhere to the principle of the state above Almighty God. A nation built upon a foundation of such godless philosophy cannot survive. So we witness the collapse of Nazi Germany. Yet only half the battle is won.

It is now imperative for us, the living, to dedicate and consecrate our lives—even if it takes years—to the grim task of laying the foundation for a peace that will last for generations to come, in order that we shall redeem the heavy price paid in bloodshed and human life.

For people throughout the world to live in a world of universal brotherhood, they must adopt the spirit of this commencement—mutual understanding, respect, and faith. To realize this objective of universal brotherhood, the nations of the world must restore human dignity among mankind. There can be no dignity of man without faith in God. Unless all men are imbued with that faith, our hope of realizing the dream of universal brotherhood will crumble in hopeless disaster. Every one of us, Catholic, Protestant, or Jew, believes in the basic religious ideology—that "the immortal hope and destiny of every human being is the Kingdom of God." It gives human life its worth.

Our first obligation is to meet the moral and spiritual conditions that are the essentials of universal peace and brotherhood. As Pope Pius XII so eloquently stated following the termination of the European war, "Peace cannot flower and prosper except in an atmosphere of secure justice and of perfect fidelity joined with reciprocal trust, mutual understanding, and benevolence in a spirit of universal brotherhood." But before this is a permanently peaceful world, it must be a just world. Before there is an enduring peace among the peoples of the world, there must be brotherhood among them.

War has aroused discord, suspicion and hatred everywhere, but united together in the spirit of universal fellowship, we can overcome these obstacles and build a better world. It is a challenge and an obligation to God-fearing people everywhere. The responsibility is ours. We cannot and will not shirk it. To this task the world must bring a strong faith in divine providence. For its fulfillment, the people of the world must have hearts animated by a generous indestructible love of one's fellow man. We must exercise world statesmanship. Such statesmanship must be animated and governed by the great principle first enunciated in the Old Testament and then spread the world over through its quotation in the New Testament that, "Thou shalt not hate thy brother in thy heart, but thou shalt love thy neighbor as thyself."

So long as race riots occur in Detroit and in other cities, so long as the poll tax can continue in the South—preventing even soldiers on the front from voting—so long as anti-Semitism continues to increase in America, there is little likelihood of our securing an enduring basis for cooperation with the Orient or even the countries of Latin America.

The brotherhood of man must grow at home before it can be in wider commonalty spread. Our real task lies not between the nations but within each nation. Yes, within the heart and mind and will of every man.

Moreover, the day is past when we can work for ourselves alone. The day is past when Americans can hope to enjoy freedom and security without regard for the other peoples of the world. Human rights are the same for all of us, and surely we know by now that what threatens them in one country threatens them all over the world. That is why some of us in Congress have been talking about an international bill of human rights, to be recognized and enforced by the world security organization we are now creating in San Francisco. It is a big goal we have set for ourselves, but one that all of us can help to achieve, simply by working toward it in our own home, in our own back yard, in our own community, and in our schools. Yes, just the way it is taught and practiced at Duquesne University. Doing this, we shall see human rights protected in the only place where they can really be secure—in the hearts of our fellow men.

General Grant, Exemplar for Modern Soldiers

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Memorial Day address delivered by Charles J. Zinn, commander of Lafayette Camp, Sons of Union Veterans of the Civil War, at Grant's Tomb, New York, on May 30, 1945:

In keeping with a custom of many years—which has indeed become an integral part of the tradition of Memorial Day in New York—it is again my privilege, as Commander of Lafayette Camp, Sons of Union Veterans of the Civil War, to speak briefly to you and to recall to your minds something of the glories of our great Civil War hero, Gen. Ulysses S. Grant. As you know, the first of these ceremonies was held soon after this tomb was erected under the auspices of U. S. Grant Post, No. 327, Grand Army of the Republic, and for the past quarter of a century we of Lafayette Camp have carried on as the successors of that post.

We like to believe that the simplicity of these services and our humility in conducting them are peculiarly and appropriately consonant with the true simplicity and humility of him whose memory we are honoring. Without question we could readily obtain the services of famed and gifted orators who would eagerly welcome the opportunity of singing the praises of General Grant in choice word and measured phrase above the reach of ordinary man, and it may be that only in such fashion can we do him justice. But no practitioner in panegyric, no professional purveyor of praise, lacking a deep and heartfelt appreciation of the man his tongue extols, would ever satisfy our sense of reverence for that truly great man. And it is just such simple and homely words as ours that we believe he would have preferred.

A few years ago it was considered smart and sophisticated to scorn and degrade our national heroes in what was fatuously called "debunking" them, and it is to our everlasting shame that some of our esteemed authors succumbed to that mood so far as to attack even Washington, the Father of our Country, and Grant, the preserver of the Union. Fortunately, during those years there were still proud Americans, like you who have attended these exercises year after year, and by whom the memory of our heroes has been preserved and held sacred. And let us not for one minute ever forget the glory that is Grant's. The words of Cicero in one of his orations against Cataline are especially appropriate: "If the glory of him who founded Rome was great, how much greater should be that of him who saved it from overthrow after it had grown to be the mistress of the world."

It almost appalls us when we try to estimate to what extent we and the world are indebted to the victor at Appomattox. The glorious accomplishments of our armed forces which so recently culminated in VE-day would never have been were it not for General Grant and all that he was.

Our generation is not the first to admit its error and to revise its opinion of that Civil War leader. Horace Greeley, whose name is synonymous with journalism, was one of Grant's severest critics, rarely missing an opportunity to berate him editorially, even though after Shiloh one of Greeley's own correspondents wrote to him that "General Grant displayed not only great coolness but cheerful confidence, skill, and good judgment. It is easy to indulge in flippant criticism, but the country is too much indebted to General Grant to condemn him without cause."

After Vicksburg, Greeley, making a complete about-face, wrote with his brilliant pen of "the steady purpose, the unshaken fortitude, the fertile talent, the heroic determination of General Grant."

Grant's comrade in arms, Gen. William Tecumseh Sherman, was also highly critical of the plans before Vicksburg and went so far as to write a letter of protest on behalf of the other generals. After the battle, however, Sherman was the first to acknowledge his mistake, and wrote to his wife: "Grant is now deservedly the hero. He is entitled to all the credit of the movement, which was risky and hazardous in the extreme and succeeded because of its hazard."

Finally, even our great Civil War President had been, at least privately, critical of Grant's plans but hastened to admit his error and wrote Grant: "I now wish to make the personal acknowledgement that you were right and I was wrong."

If we analyze the man and his achievements with a view of discovering the source of his greatness I believe that we will find that it can be summed up in one word—"character." As Wister so graphically put it: "It would be strangely inconsistent to find in Grant's adolescence any signs of precocity, such as mark, for example, the early years of Webster, another rustic boy with very similar antecedents. For intellect was Webster's gift. while character was Grant's; and character finds no outward expression save in life's chances."

No more striking tribute to his character could be made than that of Gen. Joseph E. Johnston, a Confederate officer who wrote of Grant in the following terms:

"He bore a great soul. He was a large man. He was a rough soldier. He struck hard blows and did rough things but war is no holiday spectacle, nor parlor amusement. But Grant never in his whole career as a soldier of the Union Army ever did one thing for which his posterity will blush or which his countrymen must palliate or excuse. He foraged in Mississippi as he had the right to do, and he foraged like a soldier and a gentleman, as he was, in a legal, decent, orderly way."

That is what his adversary thought of him.

The North remembers and honors him for his unfaltering courage in the hour of danger. The South remembers and loves him for his unvarying kindness in the hour of triumph. All his countrymen, North and South, unite in admiration for his genius and affection for his character.

It has been said that the United States is constructed on a great pacific political principle which was enunciated more than 1,900 years ago: "Peace on earth, good will toward men." And that the struggle of 1861–65 was a contest to determine whether a nation so conceived and so dedicated could long endure. With Cicero let us always remember that the man who preserved such a nation is entitled to the deepest gratitude not only of his fellow countrymen but of all the world.

This man who was the first to be appointed General of the Armies of the United States under our Constitution, is the perfect exemplar for our modern generals of whom we can be so justly proud.

Brilliant strategists, resourceful tacticians, utilizing their every weapon to its best advantage, they—the Eisenhowers, the Clarks, the MacArthurs—like Grant, are model soldiers. Despite their professional military education they cannot be called professional soldiers as that term is understood in the Old World, because the ravages of war are

hateful to them. Their inspiration is in the cause for which they have fought and are now fighting. If no crisis had occurred to threaten our national existence, perhaps not one of them would be known beyond a small circle of friends, and perhaps no evidence of their genius would ever have been displayed. It seems to be one of the blessings of our democracy that when danger threatens there evolves a man often hitherto unknown, dominated by a persistent sense of duty to God and country, to rise up and overcome it.

Grant's compassion for a conquered adversary which was such an outstanding part of his character, which redounds so creditably to the victorious general and which may well be emulated by our modern generals, was no maudlin expression of a weak man nor did it blind him to the necessity of punishment for actual war criminals. In a letter to his devoted wife he wrote:

"The suffering that must exist in the South the next year, even with the war ending now, will be beyond conception. People who talk of further retaliation and punishment, except of the political leaders, either do not conceive of the suffering endured already, or they are heartless and unfeeling and wish to stay at home out of danger while the punishment is being inflicted."

That is only one of the many expressions of the magnanimity of the fine, God-fearing, Christian soldier and gentleman, who having achieved a brilliant military victory sought to cement in the bonds of universal brotherhood the Union which he had preserved. Where can our modern soldiers look for sounder guidance in the hour of victory as well as in the awful contacts of battle. That they have Grant for their exemplar and that they are following in his footsteps in waging the war and laying the foundation stone of peace is no mere accident but is a demonstration to the world of the true meaning of the American character.

American Armies in China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following portions of a letter received from a friend who has recently returned from many years of service as a phyisician in interior China:

WESLEY MEMORIAL HOSPITAL,
Chicago, Ill., June 1, 1945.

DEAR WALTER: I have read and reread with a great deal of interest your speech, What Is the Truth About China. We hold similar views, and I say many of the same things that you have said in this speech. I have had much less evidence to back my statements but we come out at about the same point.

As we traveled across China we were saddened by the number of Americans in the armed forces that were soured on China. I soon discovered that they had received no conditioning at all. They hadn't the slightest idea what China would be like, nothing of its customs, etc. I am sure I would be worse than they if I were dropped into the middle of a village and unable to talk with the Chinese. I understand that something is being done to improve this situation. It is high time. "Vinegar" Joe didn't believe in it so I have been told.

The other notion I have is that we will profit more in the long run if we try as an ally to proceed at a rate a little more nearly the speed at which the Chinese can cooperate. If we insist on going at our speed then we will do the job for them and they will come out as weak or weaker than they went in. It will be a real tragedy to all if we do most of the driving in getting the Japanese out of China.

Sincerely,

GERALD.

The Late Alton P. Tisdel

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. BRYSON. Mr. Speaker, the passing of Alton P. Tisdel, Superintendent of Documents at the Government Printing Office, where he has faithfully worked for nearly half a century, has been noted with regret.

In company with my colleagues, Congressman BECKWORTH, of Texas, and GATHINGS, of Arkansas, I attended the funeral services of Mr. Tisdel on Monday, June 4, here in Washington. The large crowd paying last respects to this devoted public servant gave testimony that he was held in high esteem by his superiors as well as his subordinates.

During the 48 consecutive years of Mr. Tisdel's work he was seldom, if ever, absent except for the short time before his passing.

Through faithful and diligent application to the public trust assigned him, Mr. Tisdel advanced from the grade of a common laborer to that of superintendency of his department. Upon taking over the Document office which at that time was running at a deficit to the Government and by applying strict rigid business principles thereto, a net earning of a million dollars annual profit now flows into the Government Treasury.

It is entirely fitting and proper that this loyal, patriotic public servant's record be officially acknowledged. Let all of us seek to emulate the fine example set by Superintendent Tisdel. As a part of my remarks I attach hereto an article from the Washington Post of June 2:

ALTON P. TISDEL, VETERAN UNITED STATES OFFICIAL, DIES

Alton P. Tisdel, 65, whose position as Superintendent of Documents of the Government Printing Office won him the title of "Uncle Sam's Bookseller," died at Emergency Hospital yesterday morning after more than a month's illness.

In his 48 years of Government service Mr. Tisdel built up the Office of Superintendent of Documents from an organization which cost the Government money each year to one that now returns more than a million dollars in profits to the Treasury annually. He served as Assistant Superintendent from 1908 until 1921, when he was advanced to Superintendent.

STARTED WITH THE POST

Just prior to the 90's Mr. Tisdel was a Washington Post carrier boy. He told with considerable pride of the days when he would walk from his home on O Street NW. to the old Post Building at Tenth and E Streets NW. at 4 a. m., get his papers, and then serve his paper route from his home up to Florida Avenue NE., then the "boundary" of Washington.

Mr. Tisdel was born in Washington, D. C., on October 17, 1879, the son of Henry Carter Tisdel and Martha Ann Purdy Tisdel. He attended the public schools, graduated from Central High School, and later from the Pace School of Accountancy.

His long Government career of more than 48 years began in 1897 when he took a position in the Documents Division of the Government Printing Office. His maternal grandmother, his father and mother and two aunts, as well as his only brother, Willard S. Tisdel, all at some time worked in that office.

HANDLED BIG TASK

The office which Mr. Tisdel headed now distributes about 30,000,000 publications yearly, many of them at no cost. About 60,000 types are distributed. One of the biggest jobs he directed was the distribution of the National Recovery Administration codes during the early part of the New Deal. A best seller has been a baby book issued by the Labor Department, which retails at 10 cents a copy.

Although the GPO was prohibited by law from advertising, Mr. Tisdel received considerable help from the American Library Association of which he was a member. Each month, its bulletin listed the Government books and pamphlets available. Another practice that brought in revenue was close cooperation with trade journals, which pointed out to their readers the advantages of certain Government books.

Mr. Tisdel, who was also a member of the Graphic Arts Association, always attended Library Association meetings as the Government representative.

CREATED "CAREER" OFFICE

Mr. Tisdel's ability in building up the Superintendent of Documents' office was recognized by the various administrations since that of Theodore Roosevelt's last administration. The office has been considered during his incumbency not as a patronage position but as a career position.

As a young man Mr. Tisdel, who was of robust build, was a member of the old Analostan Boat Club and was a member of its rowing crew on the Potomac. He also was a skilled tennis player.

On his birthday in 1907, he married Miss Virginia Cooke, a native of Newark, N. J. Mrs. Tisdel survives him, as does his only brother, Willard S. Tisdel, retired secretary of the Liggett & Myers Tobacco Co., St. Louis. Mr. Tisdel's father died in 1891 and his mother died in 1938.

Mr. Tisdel was well known in Government circles, especially to members of the congressional committees on printing and in all departments whose publications he distributed to the people of the country. He was much beloved and had many friends in the Government Printing Office. His long record of service there was uninterrupted until about 5 years ago when he was compelled by illness to remain away from work a month. His last illness had kept him from his desk more than a month.

He Will Be There

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my re-

marks in the Appendix of the RECORD, I include an ode to President Franklin Delano Roosevelt by Gladys J. Stephenson entitled "He Will Be There":

The great white ship moves slowly through the Golden Gate. No one sees it, but it is there.

And on the topmost deck is a tall man who loves the sea. The winds whip the old navy cape which he has worn around the world. His eyes are calm, serene with the full knowledge of the eternal verities. In his eyes is still the vision of a brave new world. And he walks the deck. He walks—freely, triumphantly, he walks.

And no one sees him—no one except the host of sailors who are his guests on this voyage. They are all there, all those who have died at sea in this great war—who have died that you and I and all men might be free. And their eyes shine, and they smile with happiness, and they walk a little more proudly, because their Commander in Chief has come to be with them. No one sees them, but they are there.

And the tall man in the navy cape will be present at that meeting of men from many lands, in the great city by the Golden Gate. And the sailors will be there. And soldiers from many battlefields, and men who winged their way through death-filled skies. They will all be there. They will watch and they will listen.

And the tall man will speak to the men from many lands, from our land. He will speak to their minds. He will speak urgently to their hearts.

O God, grant that they listen.
God grant that they heed.

GLADYS J. STEPHENSON.

APRIL 17, 1945.

Open Letter to the American Delegates to the San Francisco Conference

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. LEFEVRE. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD at the request of my constituent, Judge William H. Wadhams, an international lawyer, who was in attendance at the peace conference following World War I, an open letter sent to our delegates in San Francisco and the signers of this letter:

MAY 17, 1945.

To the United States Delegates to the United Nations Conference on International Organization:

In order to accomplish the expressed purpose of the Dumbarton Oaks proposals "to establish an international organization" to "maintain international peace and security," it is necessary that a set of rules of fundamental law be agreed upon and be incorporated in a constitution or organic law, and that a Supreme Court of the United Nations be established with judicial power to determine when those laws have been violated by nations or the individuals who compose them.

This judicial function should not be entrusted to the Security Council. The Security Council should be restricted to the use of force to maintain the status quo until the Court renders a decision, and to enforce, when necessary, the decision of the Court after it has been rendered.

The Dumbarton Oaks proposals, ignoring, excepting in minor matters, the necessity of a judicial determination, have centered attention on the use of force by an executive body to suppress aggression or use of force. The use of force, however, cannot be prevented when justice is denied. Justice is denied unless rules of conduct between states have been agreed upon, and are impartially applied by a court to the particular case, and are enforced.

The Dumbarton Oaks proposals fail to prohibit the acts which the United Nations have already agreed are the principal causes of war. These causes, and the way to eliminate them, were proclaimed in the Atlantic Charter. This method was agreed to as a basis of joint action by the United Nations in their declaration signed on January 2, 1942. It was subscribed to as a common program. It should, therefore, form the basis of the set of rules of fundamental law regulating the conduct of states. This set of rules should be incorporated in the charter or constitution now being drafted at San Francisco.

Respectfully submitted.

Warren R. Austin, United States Senate; Ruhl J. Bartlett, Dean, Fletcher School of Law and Diplomacy, Medford, Mass.; W. Calvin Chesnut, United States District Judge, Baltimore; Richard S. Childs, Chairman, Institute of Public Administration; Guy Richards Crump, Former Judge of the Superior Court of California; Stephen Duggan, Educator; Lucien D. Gardner, Chief Justice, Supreme Court of Alabama; Chauncey B. Garver, New York Bar; Pierson Hall, United States District Judge, Los Angeles; William M. Hepburn, dean of School of Law, University of Alabama; John C. Knox, Senior United States District Judge, New York City; Arthur K. Kuhn, Former President, American Branch, International Law Association; Charles M. LaFollette, United States House of Representatives; Robert McC. Marsh, Former Justice, New York Supreme Court; Marshall F. McComb, Associate Justice, California Court of Appeals; J. F. T. O'Connor, United States District Judge, Los Angeles; Owen J. Roberts, United States Supreme Court; James W. Ryan, Chairman, Committee on International Law, New York County Lawyers Association; William H. Wadhams, Former Judge, New York Court of General Sessions; Myron Westover, Judge, the Superior Court, Los Angeles; Robert M. Wilkian, United States District Judge, Cleveland; Ignatius M. Wilkinson, New York Bar.

Court Action Begun To Compel Shipyard To Rehire Veteran

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from this morning's Washington Times-Herald:

COURT SUIT BEGUN TO COMPEL SHIPYARD TO REHIRE VETERAN

NEW YORK, June 5.—A possible test case on the right of veterans to claim their prewar jobs started through Federal court channels today.

It was the case of a shipyard welder who was honorably discharged from the Army and was refused full reemployment in his old job because a labor union objected to his replacing a nonveteran.

Col. Arthur V. McDermott, New York City director of Selective Service, sought action through the United States attorney in Brooklyn to compel the Sullivan Drydock & Repair Corp., Brooklyn, to rehire the veteran for full-time work and pay him for time lost during lay-offs.

McDermott said the worker is Abraham Fishgold of Brooklyn. Fishgold, he said, was honorably discharged last August, rehired at Sullivan on a temporary basis and laid off several times because Local 13, Industrial Union of Marine and Shipbuilders Union (CIO), protested his employment.

Bretton Woods

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. PATTERSON. Mr. Speaker, the word "unity" has become the key to our times. It first swung wide the heavy doors to military victory in Europe. At Teheran and Yalta the three great Allied Nations, Britain, the United States, and Russia, met, and chose this key to open the political door to a great tomorrow of peacetime victory for all the peoples of the world.

The decisions reached at the Crimea Conference signified the determination of all the nations of the world to place foremost, disregarding as minor all distracting factors, cooperation for permanent peace and world prosperity. On February 15, two economic unity keys were stuck in the doors of the House and the Senate, respectively. One was formally labeled S. 540, and introduced by Chairman WAGNER of the Senate Banking and Currency Committee; the other, H. R. 2211 (later changed to H. R. 3314), and introduced by Chairman SPENCE of the House Banking and Currency Committee.

Both bills authorized United States participation in an International Monetary Fund and International Bank for Reconstruction and Development, in accordance with principles formulated at the Bretton Woods Conference.

Our late President, Franklin Delano Roosevelt, has called Bretton Woods the "cornerstone for international economic cooperation." The world must be rebuilt, and its capacity to supply its 2,000,000,000 people expanded if we are all to enjoy a future of prosperity and peace. First, Europe must be put on her feet. Good business dictates that this shall be reconstruction, not merely relief; to this end the peoples of Europe must obtain a means of payment for what we sell them,

since, at the moment, they are financially prostrate.

Unless a suitable means of financing them is found, they, unable to restore their economies, will be forced to beg again the dog-eat-dog system of discriminatory trade practices, restrictive exchange controls, competitive depreciation of currencies, and other forms of economic warfare that have always in the past led to political and finally military warfare. Second, we must sell at least fifteen billion in products and services abroad to sustain at home the full employment in peace that we have achieved in war.

Bretton Woods is the key to expanding foreign trade, and on foreign trade depends a minimum of 5,000,000 of the 60,000,000 goal in postwar jobs. In addition to recreating and expanding our former European markets, new world markets must be created by developing backward countries. By raising the standard of living for the whole world, the economic security of every individual nation is insured.

The monetary fund will primarily stabilize currency and exchange rates between nations, thus facilitating financial transactions and eliminating the old competitive barter system. It will also make short-term loans for immediate revivication of trade. The bank will be primarily concerned with long term loans for reconstruction and development, guaranteeing private loans and selling stock.

A very important and infrequently mentioned consideration is that the bank will insure against German or European rearmament, since it can control the economic development of member countries through channeling private investments so as to grant loans only to nonwar enterprises. The spreading of cartels can similarly be prevented. We in California will be particularly benefited in our trade with China, since the Monetary Fund will stabilize exchange rates between the two countries, and the bank will back loans made by us to China. With the aid of the bank, China and California can be of great mutual benefit in an economic sense.

The enemies of Bretton Woods will seek to add to S. 540 and H. R. 3314 crippling amendments which will draw support from forces which have reservations on certain phases. They know that to amend Bretton Woods is to kill it. The old game of destroying by accepting nothing short of perfection, the game which worked so well in 1919 with the League of Nations, will be tried again.

But the issue before Congress now is not a system whose perfection or completeness is guaranteed. That would be impossible. Franklin Roosevelt has said:

> I do not want to leave you with the impression that the fund and bank are all that we will need to solve the economic problems which will face the United Nations when the war is over. * * * There are other problems. * * * It is my expectation that other proposals will shortly be read.

Bretton Woods is only the first step, but it is the essential, primary step, and one on which 44 nations have agreed. That in itself is no mean trick. As the Crimea Conference sought an end to political warfare, Bretton Woods seeks an end to economic warfare, an assurance that the war will not only be well fought but well won. The keys of economic unity, S. 540 and H. R. 3314, are sticking in the doors of Congress. It is up to the American people to turn them, to open yet one more gate on the road to lasting peace and increasing prosperity. I cannot ask, "Will we do it?" I must say, "We must do it."

Mr. Speaker, when I have considered the conditions under which our lives have been lived—two world wars within less than 25 years, the succession of wars between that prepared the way for the second world conflagration, Nazi degeneration and brutality, drought, bread lines, depression, foreclosure, hunger, poverty, and man's inhumanity to man—I have felt that of all generations that have lived on the earth ours is one most accursed and desolated. Yet, when I dream of the future, I sometimes think we may be among the most fortunate and blessed of generations. The Old World is in ruins, and many of our best and bravest men lie buried under those ruins. But we have been given in unlimited measure the godlike opportunity to create a new world on the ruins of the old. We owe it to those men to seize the opportunity.

H. R. 3314, the Bretton Woods agreements bill, offers the American people, through us as Representatives, the first creative opportunity to make a new world different from the old. For the practice of the destructive techniques of economic warfare we may substitute cooperation among nations. We cannot lose sight of the weight and significance that attach to United States action. When the Banking and Currency Committee voted favorably, and by such an overwhelmingly majority, on this legislation, the effect on the delegates to the San Francisco Conference was electric. It is not a rhetorical exaggeration to say we can substitute cooperation for the play of selfish antagonisms. We are the richest, the most productive, the most powerful, and the most respected nation in the world. The shape of the world of the future can be of our making.

I like to draw an analogy between the creation of the world as described in the first chapter of Genesis and the creative task that lies before us. If we build solidly and well, I believe that we, too, will be able to look upon the world and say that it is good.

To build solidly and well, we must begin at the very foundations of our world, and create the material conditions on which moral and spiritual values must be based if they are to live. The Bretton Woods agreements will create those conditions. In its statement on this legislation, the Southern Conference for Human Welfare was echoing the sentiments of business and professional groups throughout the South when it wrote that it "recognizes these measures as the minimum for an international program basic to the solution of the economic, social, and political problems of the South and the Nation."

I would add: "and of the world."

Full employment, a high standard of living, financial stability so that businessmen in one country can conduct business swiftly and with confidence with businessmen in other countries, expanded production, sound money, orderly procedures for international exchange—these are the essentials to a healthy international economy within whose frame we can create political stability and peaceful international cooperation in all fields of human activity. This is the great creative endeavor which we have been offered the chance to initiate by voting United States approval of the Bretton Woods agreements.

Release of Automotive Textiles

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. POWERS. Mr. Speaker, because of the growing fear of widespread unemployment during the reconversion period, I take pleasure in introducing into the CONGRESSIONAL RECORD a copy of a letter sent by my good friend J. R. Millar, president of National Automotive Fibres, Inc., to the Honorable J. A. Krug, Chairman of the War Production Board.

Mr. Millar's thoughtful letter brings strongly to the attention of the War Production Board the need for governmental action at the present time to release textiles for the production of automotive interior trim.

National Automotive Fibres, Inc., has nine plants in various sections of the country, one of which is located in my home town of Trenton, N. J. I realize how important it is for my Trenton constituents, as well as for the country as a whole, for the War Production Board to take aggressive action to solve the problem which Mr. Millar has brought to the attention of Mr. Krug.

Mr. Millar's letter follows:

JUNE 5, 1945.

Hon. J. A. KRUG,
Chairman, War Production Board,
Social Security Building,
Washington, D. C.

MY DEAR MR. KRUG: The increasing cutbacks in production in all of our plants for the war effort has forced me to bring to your attention the urgent necessity which has arisen for release of textiles for the production of automotive interior trim.

Our corporation was, before the war, the principal supplier of trim materials for the automotive industry. During the emergency we devoted our facilities 100 percent to aiding the successful prosecution of the war. We have manufactured parachutes, tents, lifebelts, life jackets, ponchos, and a myriad of other items which played a material part in the victory over Germany.

The great bulk of our production has been for the Army Air Forces which are now cutting back on their contracts due to the changing nature of the war in the Pacific. As a result of these cut-backs, we are faced, in all of our plants, with a considerable reduction of personnel unless some assistance

is given us by the War Production Board which will enable our corporation to return to its normal peacetime production for the automotive industry.

Despite the belief prevalent that automobiles could be manufactured without Government assistance, this situation does not apply to the interior-trim field, since the Government has commandeered all facilities for the weaving of textiles and has also commandeered all importations of textiles. Under this 100-percent commandeering policy, it is impossible for us, or any other firm, to fabricate automotive textiles unless the necessary quantity of goods are made available by WPB to our industry for that purpose.

Several large automobile manufacturers are now sending us orders which we cannot fill. We have the equipment, which is now running at a slow pace and will soon stand idle, we have the manpower which will soon become surplus, and we have the market for our products. The only thing we do not have is the material necessary for the fabrication of these products. We believe our request that the Government assist us in obtaining the textiles necessary for the first production of cars is in the best interests, not only of our organization and its employees, but also in the interest of the economic struction of our Nation. The cut-back period in our industry will throw a labor surplus into the manpower markets of the country. If we are permitted to resume our peacetime line of business and if we are given the necessary textiles, our corporation will be in a position to assist in absorbing some of the imminent and serious labor surplus. Naturally, any large-scale production in our company for the automotive industry will require several months of preparation. Before we can adequately prepare for such production we must have assurance from the Government that a sufficient quantity of textiles will be made available to us for this purpose.

We have plants in Detroit, Mich.; Oakland and Los Angeles, Calif.; Cohoes and Little Falls, N. Y.; and Trenton, N. J.; whose facilities are normally devoted almost entirely to production for the automotive industry. Each of these plants and the thousands of men and women they employ will be benefited by a release of fabrics.

I should like specifically to bring to your attention the fact that the cost of the interior trim in an automobile is only an insignificant percentage of the total cost of the car. However, the men and women who are employed in the manufacture of this trim are just as important to our Nation's economy as are the men and women in any other industry. Present plans are for cars to be rolling off the assembly line by August 1, 1945. Not only are our employees as important to the Nation's economy as are the men and women in any other industry but the trim we manufacture is as important to the automobile as is the motor or the wheels. Consequently, if we are unable to obtain materials for the manufacture of this trim, it will be impossible to produce automobiles; and resultant unemployment will spread through the entire automotive industry. To give you a specific idea as to the amount of textiles and allied materials which are now under the control of the Government and which will be required for the first 3 months of new-car production, I append a complete list of these materials by months. You will note that we must have the material at least a month in advance of shipment to the automobile manufacturers so we can fabricate the trim. This list has been figured by our plant managers and is definitely on the conservative side. It represents the minimum amount of material required by us to meet the minimum demands upon us for interior trim by the automobile manufacturers. The list follows:

Tobacco cloth, 36-inch:	*Yards*
July 1945	190,000
August 1945	870,000
September 1945	1,340,000
Cotton sheeting:	
36-inch, 44/40, 7.45 yards:	
July 1945	4,000
August 1945	18,000
September 1945	28,000
52-inch, 44/40, 5.15 yards:	
July	4,200
August	19,500
September	31,000
60-inch, 44/40, 4.46 yards:	
July	6,900
August	32,000
September	48,000
60-inch, 40/40, 3.26 yards:	
July	4,800
August	23,500
September	36,000
66-inch, 44/40, 4.05 yards:	
July	6,000
August	26,500
September	42,200
Sisal:	*Pounds*
July	310,000
August	1,375,000
September	2,427,000
Head linings:	
71-inch, 38/46, 1.12 yards:	*Yards*
July	3,900
August	17,400
September	27,950
31-inch, 44/40, 5 yards:	
July	4,500
August	21,000
September	55,000
Osnaburg:	
July	90,000
August	208,000
September	300,000
Burlap for pads, 40-inch, 7½ ounces:	
July	72,000
August	320,000
September	509,000
Burlap for carpet, 48-inch, 7½ ounces:	
July	46,000
August	122,000
September	211,000
Cotton linters:	*Pounds*
July	158,000
August	587,000
September	926,000
Thread:	
12/4 silk finish, 4,800-yard cones:	*Cones*
July	20
August	72
September	124
16/3 or 12/4 natural cotton:	
July	1,250
August	5,500
September	8,500
16/4 silk finish:	
July	92
August	410
September	650
12/4 regular:	
July	3
August	10
September	21
16/4 cotton, 4,800-yard cones:	
July	20
August	52
September	75
20/4 cotton:	
July	65
August	290
September	420
30/4 cotton, 4,800-yard cones:	
July	10
August	45
September	75
30/2 cotton:	
July	6
August	25
September	38

I can easily support this letter by requests from the Chrysler Corp. and other automobile manufacturing concerns with which we do business, but I know that with your knowledge of the automotive field you can see how urgent it is that material be made available for trimming the interiors of the new cars. This really boils itself down to the essential fact that new cars cannot be produced without automotive trim and no textiles can be obtained for this trim unless they are released by the Government in sufficient quantity.

There have been reports in the automotive industry that a plan for the allocation of textiles to our field has been drafted within WPB and that this plan is awaiting policy approval by you and your assistants. I hope you can give this matter your immediate attention and that you will see to it that arrangements are made to make available to us, and others in our field, textiles which will be required to trim the passenger automobiles which will be produced this year and which are badly needed to avert a breakdown of our transportation system and to avoid serious unemployment which will be destructive to our national economy.

Very sincerely yours,

J. R. MILLAR,
President.

Congressional Expense Allowance

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. WOLVERTON of New Jersey. Mr. Speaker, I will vote "no" on the question now before the House, with respect to the allowance of $2,500 to Members for expenses incurred by them in the conduct of congressional business, although there are many reasons to justify an allowance.

Without enumerating all of these reasons I merely mention, by way of illustration, that a Member of Congress should not be expected to pay out of his own pocket the expenses he incurs, in the conduct of the business of his constituents, any more than for any businessman who comes to Washington representing his employer, to pay out of his own salary the expenses he incurs while doing the business of his employer. To require him to do so would be considered unfair and unjust on the part of the employer. Consequently, it is the universal custom for the employer to allow his representative an expense account and to pay all of his expenses so incurred. Furthermore, the expense money so received is not considered by our Federal income laws as taxable income. Therefore, it is exempt from taxation.

The position of a Member of Congress is analogous to that of the businessman I have already mentioned. He is elected by the citizens of his congressional district to come to Washington and represent them. He is in Washington on their business. He incurs expenses far beyond the clerical assistance that is provided.

The bill now before the House makes an allowance for payment of such expenses. In view of the fact that the allowance is for expenses it is not subject to income taxation. This bill seeks to establish the same basis for payment of expenses incurred by a Member of Congress as now applies to all businessmen throughout the entire country.

However, there are reasons beyond the question of whether the legislation is just or meritorious that, in my opinion, should be taken into consideration. It is these reasons that prompt me to vote against the allowance of expenses at this time.

While strictly speaking, such an allowance is not an increase of salary, as some may argue, yet it does have that effect in that at the present time all such expenses are paid out of the salary received by the Member. Thus, by such an allowance there is a net gain to the Member. Under these circumstances it does not seem, in my opinion, to be appropriate or proper to take any action that may even be considered an increase in salary for Members of Congress, when the national policy, in the fight against inflation, has been to refuse any increase above the 15 percent fixed by the Little Steel formula, nor when so many white-collar workers have not even had such an increase.

The following editorial from the Courier-Post newspapers, published in Camden, N. J., dated Thursday, May 31, 1945, has so forcefully and logically presented the viewpoint that notwithstanding the merit of an increase in congressional compensation, yet this is not an appropriate time, that I include the editorial as a part of my remarks:

CONGRESS DESERVES A RAISE—BUT WAIT A WHILE, BOYS!

Members of Congress deserve a boost in pay, a good-sized boost.

But we don't like to see Congressmen shoving to the head of the line of all those waiting for pay increases.

Apparently the Senate doesn't, either.

For the Senate has refused to vote itself a $2,500-a-year increase in compensation in the form of "expenses." But, applying senatorial courtesy to the lower House, it did approve the same increase which the Representatives had voted themselves.

That leaves the Representatives in a highly embarrassing position. If the boost goes through, they'll be getting $2,500 a year more than the Senators. (Members of both Houses receive the same base pay of $10,000 a year.)

It seems certain that President Truman will gracefully remove the Representatives from their embarrassment—by a veto.

That will leave Congressmen's pay where it was, with the Members of Congress forced to put Uncle Billy and Aunt Sue on the pay roll as clerks to eke out their pay.

As a matter of fact, we don't believe the $2,500 increase is enough for normal times.

Last January we published an editorial endorsing a suggestion of the National Planning Association to increase the pay of Members of both Houses to $25,000.

But we added: "It would have to await the war's end, of course. It would be unthinkable to boost wages so spectacularly in Washington while we are striving to hold the wage line against inflation throughout the rest of the country."

That still holds.

If the $2,500 increase were merely a straight increase in pay, it would amount to 25 percent—far beyond the Little Steel formula of 15 percent.

But it becomes more than that, what some Congressmen have called a "big steal," because the money is labeled expenses—although not subject to accounting—and free from income tax.

We hope the House doesn't wait for Truman's veto and rescinds its action before the rest of the country gets as stirred up as the two Representatives who indulged in a fist fight Tuesday.

Federal judges deserve pay increases, too.

Their position, of course, is different from that of Congressmen. They can't raise their own pay. All they can do is to sit on the bench and look sad.

But there are bills before Congress to increase the pay of Federal judges $5,000 a year, from the Chief Justice to judges of the district and customs courts. That's fair enough. The rate of pay hasn't changed since 1926, and the judges in effect got a pay cut when in 1932 Congress made their pay subject to Federal income tax.

But the Federal judges, too, should take their place in line along with the rest of us.

We apply high standards to our Federal servants, in Congress and on the bench. Most of them are able, honest men who do not deserve the caricatures and caustic jokes leveled at them. They deserve commensurate pay. But they should set an example, by waiting for increases until it's O. K. for Joe Doakes to get a boost in his weekly pay envelope.

Education for Farm Youth

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave granted to extend my remarks in the Appendix of the RECORD, I include the following colloquy between Bob Evans, distinguished CBS news analyst, and myself over Station WFBL, Syracuse, N. Y., May 18, 1945:

Mr. EVANS. Here is Congressman HALL to talk about education for farm youth.

Congressman HALL. Bob, 25 years ago, life on a farm to the boy or girl who was raised there was generally considered by that child, as just one long drudge, and to the city children who joined their country cousins for a few weeks' summer outing on Grandpa's farm, the rural boy or girl seemed sadly lacking in every positive characteristic.

Mr. EVANS. They had no educational facilities such as Dick Tracy and Terry and the Pirates in the comic strips.

Congressman HALL. And no Superman or Tom Mix on the radio. But seriously Bob, the rural boys and girls in those days were not lacking in positive characteristics. Whenever the exterior of the farm youngster was rubbed off a bit, the real values and qualities which have made American agriculture what it is today peered forth. But there was no question but that the farmer's kids could do with a lift. Not alone to develop the character the city folks didn't see on the surface, but also to spur on the initiative so sorely needed for better farming in the days to come.

Mr. EVANS. And so some forward-looking people got together to see what could be done about it.

Congressman HALL. Yes. The school authorities, the farmers themselves, and a lot of other interested people held meetings and talked it over. They saw that possibilities were rich for giving agriculture a brand new approach, and a brand new lift toward a better life for the generations of farm people to come. Moreover, these citizens wanted to find some way to keep young people on the farm; to make farming so attractive they would want to stay.

Mr. EVANS. And then too, they realized that in order to bring production and progress, the youth of a nation must take a positive, healthy interest in production and progress.

Congressman HALL. Yes. They concluded that to save agriculture the farm boy himself must want to save it.

Mr. EVANS. And so——

Congressman HALL. And so they examined rural areas in all parts of the country. Some were found to be thriving and well off. Many other parts, however, were backward and poverty stricken. A careful analysis showed that where the youth stayed on and took pride in the land, the land and the community almost invariably responded.

Mr. EVANS. I imagine education—school systems had much to do with bringing about more advanced communities.

Congressman HALL. Bob, wherever rural school systems excelled, the youngsters knew a lot about their parents' farms. In upstate New York, where education in the rural districts—right out in the country—had been fostered thoroughly, farm youths were raising their own stock, planting their own gardens, and gleaning knowledge which was to prove invaluable to them in their later life on the farm.

Mr. EVANS. The answer, then, was to provide specialized and extensive courses for all communities.

Congressman HALL. Yes. Courses in agriculture and home training subjects. Subjects designed to build interest in farm life as well as to teach better ways of farming.

Mr. EVANS. And so the 4-H Clubs were born.

Congressman HALL. They were. The four-leaf clover supplied the lofty symbol, along with an H for every leaf—head, hands, heart, and health are necessary attributes. They are the positive forces which can be encouraged to really develop agriculture.

Mr. EVANS. I presume you are thoroughly familiar with 4-H Club activities in up-State New York?

Congressman HALL. I am, Bob. The New York State 4-H Club movement has consistently grown during the last few years, and now represents a great force for good; for progress on up-State farms. 4-H Club leaders are chosen for their intelligence, their ability to handle young people, and their genuine interest in building knowledge and character.

Mr. EVANS. But 4-H Clubs didn't have easy sledding in the beginning.

Congressman HALL. No. At first only a handful of youngsters responded. It took a lot of persuasion and perseverence on the part of the organizers to convince some parents that anything but doing actual farm work could teach their children how to run a farm. But 4-H Club extension courses and instruction were interesting. The club meetings were wholesome and conducted on a high plane.

Mr. EVANS. Yes; many a successful farmer today gained as much experience out of the books and courses of an agriculture college as he did driving a tractor in the back forty.

Congressman HALL. That's right, Bob. The practical knowledge of how to operate a farm can't be obtained by spending all one's time hoeing potatoes or milking cows. New methods are being discovered every day about how

to do these and a hundred other farm jobs better. The 4–H Clubs, with their capable leaders and agents, are pointing the way to greater efficiency in American agriculture.

Mr. EVANS. And Congress has taken new note of this only this week.

Congressman HALL. We have, Bob. Early this week the Committee on Agriculture, on which I serve, reported out favorably H. R. 1690, otherwise known as the Flannagan bill. A bill which increases the 4–H Club budget by nearly $4,500,000. The House passed this bill overwhelmingly.

Mr. EVANS. Perhaps you'd better tell us a little about the bill's specifications.

Congressman HALL. Under the provisions of H. R. 1690, Bob, any county agent whose duties are so manifold that he is unable to cover his territory properly, may be given an assistant to work with the clubs in more detail. The bill also extends appointments of regular agents to those counties where there is no 4–H Club organization or where there is no agent.

Mr. EVANS. In short, 4–H Club activities will be expanded.

Congressman HALL. And given impetus. It is anticipated that increased personnel and more adequate facilities will enlarge upon the great work 4–H clubs are doing nationally. Individual attention to each club is something which can be improved upon, I am told. The appropriation will accomplish this.

Mr. EVANS. But do I understand that there still is some opposition to 4–H Clubs?

Congressman HALL. Bob, I know quite a few people are skeptical about money going for what they call extracurricular activities. Some consider 4–H Clubs are extracurricular because they are outside the regular rural-school education. They cannot see why money should be spent on them. However, so much actual good has come from these groups that farmers themselves would not allow their discontinuance. The true stories told about how much 4–H has taught rural youth are testimony of their value.

Mr. EVANS. Yes. I understand that 4–H Clubs have come to be considered of great value ever since the start of the war.

Congressman HALL. Bob, these 4–H Clubs have served as spearheads for production efforts on the farm. They have encouraged not only individual boys and girls to excel in the cultivation of Victory gardens but also whole sections in the job of increasing wartime crops. A few weeks ago, I saw firsthand the work of what the 4–H Clubs are doing in my own county. I made the awards at a large hobby show in Binghamton and saw the rural youth of the district run off with the honors of this show. Those youngsters had built and constructed just about every kind of object you can imagine. They were practical and accurate in their building, too.

Mr. EVANS. Yes; as a newspaperman, I have seen some of the achievements of the 4–H Clubs now and then, and couldn't help but be impressed. In addition to that they always seemed to be such healthy, happy kids.

Congressman HALL. Any boy or girl who gets the enthusiasm to follow 4–H work is bound to become a better American, a better citizen. Knowledge is power and whatever the child learns as a result of his contact with this practical application of good farming is sure to make him a successful farmer. Naturally, the extent of his learning is up to the individual boy or girl, but the sky is the limit. I have talked with a good many farmers, and I have yet to hear one say anything but the very best about their children's relation to 4–H work. So, the rural youth is now sure of a vehicle of progress. He need not stand still as did many of his kind in the old days. There are fewer barriers in his way. In his close contacts with new fountains of practical learning he can reach brighter horizons than ever before. He has the chance to make an agriculture experimental station out of his dad's farm, at the same time finding ways and means to help his parents. It is a golden opportunity. Taking into consideration all these benefits which 4–H has brought to the farmer, to his children, to his community, I am glad that I had a chance to speak in Congress for H. R. 1690 and to cast my vote for it.

Mr. EVANS. Thank you, EDWIN ARTHUR HALL.

Detroit Jewish Boy Kills 17 Germans—Hero Wins Congressional Medal of Honor

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. SADOWSKI. Mr. Speaker, I have just read this very interesting article in the publication, the International Teamster, giving details on the heroism of a Detroit boy, and the awarding of the Congressional Medal of Honor to his father. This soldier was killed in action. Let us hope that his heroism and his sacrifice will be recognized by everyone. This is just another reason why there is no place in America for racial or religious prejudice.

The article follows:

DETROIT HERO WINS CONGRESSIONAL MEDAL OF HONOR

How little Jewish teamster killed 17 Germans and captured 92 members of the "master race" is revealed in the award of the Congressional Medal of Honor to Lt. Raymond Zussman, of Detroit.

Zussman was a shop steward of local No. 337 of Detroit. He was killed in action as a tank officer with the Seventh Army in France last September, 3 days after the exploit that won him the Nation's highest military decoration.

The story of his heroism has just come to light in the presentation of the Congressional Medal to his father, Nathan Zussman, a veteran of the Russo-Japanese war.

Zussman was a little man. He weighed 140 pounds and he stood only 5 feet 4 inches in height. But he was 100 percent fighting man! The 92 Germans he captured were big, arrogant, blood-thirsty men. But they didn't have the guts to fight little Ray Zussman, the Detroit Jew.

They dropped their guns and shouted "kamerad" when Zussman charged into the French village of Noroy le Bourg ahead of his own tanks.

Zussman turned them over, 10 to 30 at a time, to the infantry when it caught up to him. Seventeen Germans who tried to fight the little American lieutenant were taken care of later by burial squads. They were full of lead.

By rights, Zussman should never have been in Noroy le Bourg on foot. He should have come in protected by the thick armor and heavy artillery of his tank.

But if he had done that, he would have missed the fighting.

Zussman's tank broke down in a field at the approach to Noroy le Bourg, held by the Germans. Zussman grabbed a carbine and went into battle ahead of another tank. He directed its fire at enemy fortifications, and finally he jumped up on the outside of the tank and rode it like a cowboy as it charged and silenced a machine-gun nest.

Still fully exposed, Zussman directed the tank against a German jeep. Then, with his carbine ammunition gone, Zussman seized a tommy gun and went on ahead of the tank.

Machine-gun fire from a house forced him back, but he attacked again with the tank. While the tank blazed away with its 75-millimeter shells, Zussman charged the house alone, dodging hand grenades and rifle shots until he had put it out of action and captured 11 prisoners.

Throughout the day Zussman and his tank fought on through the streets of Noroy le Bourg, driving the Germans back. With complete disregard for his personal safety, Zussman and his tank captured two antitank guns, an antiaircraft gun, two machine guns, and two trucks.

Zussman had previously fought in Africa and Italy. He was wounded at Cassino, and after recovering was assigned as an aide to a general. But Zussman requested a transfer back to the tanks. He was a combat officer. And as a combat officer he died. The Germans finally got him. But it took a couple of hundred of them to do it.

Compulsory Military Service

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the column in this morning's Washington Post by Mark Sullivan.

Why should we have a peacetime Army?

This question is today before the American people. I am reassured with the way that our Postwar Military Policy Committee has approached this problem.

As I understand it, they have seen fit not to directly consider any specific bill but to approach the problem broadly. They are trying to locate the American ideal of freedom and morality in the whole province of military preparedness.

In this connection, I personally read with considerable interest Mr. Sullivan's column and I commend its reading to all those who are seeking more light with regard to our postwar military problems. It follows:

HISTORY'S LESSON

(By Mark Sullivan)

A congressional committee is holding hearings this week on whether America should adopt compulsory military training during peacetime. For the country, this is one of two experiences, strangely related, which duplicates what we went through following the First World War a quarter century ago. Then, as now, we considered whether to keep ourselves prepared against future war by adopting permanent compulsory military training, and on that occasion decided not to.

The former fight for permanent military training, peacetime and wartime alike, was part of what went on from the beginning of the First World War in Europe in 1914 until some 2 years after it ended. It began with a fight for preparedness, and as such was, in the beginning, strongly opposed. As late as December 1915, after the war in Europe had been on for a year and a half, President Wilson, in a message to Congress, declared: "We shall not alter our attitude toward the question of national defense because some among us are nervous and excited."

After the fight for preparedness had been won, even after we had declared war on Germany, there was still strong opposition to compulsory military service, to a draft. Those opposing it held that America should fight this war as it had fought all its previous wars, by voluntary enlistment. (There was a slight exception which rather proved the rule—a brief, violently resisted and quickly abandoned attempt at a draft during the Civil War.) Dislike for a draft was shared for a time by President Wilson, though he abandoned that position when the reality of war came upon him. There was real doubt whether Congress would pass a draft act. In the debate, opponents of it used the harshest words: "Un-American," "Prussianize America." "Conscription is another name for slavery." The Speaker of the House, Champ Clark, left his rostrum to join in the debate and said: "I protest with all my heart and mind and soul * * *" Senator Reed of Missouri told Secretary of War Baker, "You will have the streets of our American cities running red with blood on registration day."

After the fight for conscription during wartime had been won, and after the war itself had been won, leaders kept up a fight for compulsory military training as a permanent peacetime policy. Conspicuous among them was Gen. Leonard Wood, who was a candidate for the Republican Presidential nomination in 1920. But peacetime compulsory military training did not have enough vitality to become an important campaign issue. America would have none of it.

During the quarter century since that time, America has learned some things. There is proof. During the present war, there was no material opposition to compulsory military service. America had become reconciled to the obligation of the individual to be drafted in war. The present question is whether we have become reconciled to the obligation to be drafted for military training in anticipation of war.

One thing we should have learned from the suddenness of the attack on Pearl Harbor. As Under Secretary of State Grew put it in the hearing this week, "Latent power is not enough." Our power should be trained and ready for instant action. At Pearl Harbor, within less than 2 hours, some hundred Japanese planes put out of commission over a fourth of America's naval strength. In future wars, if, they come, attack will be equally sudden and more devastating; probably there will be several simultaneous attacks at different points.

The lessons of 25 years ago and since point plainly toward a present program for America. It would be a double program and would be the opposite of what we did after the First World War. The program would be to unite in the international organization for preventing war, to hope it will work, and to strive to make it work. At the same time, by permanent universal military training, and by other means, be prepared for war in case the peace organization should fail to work.

Fort Wayne Remembers Those Who Have Served

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. GILLIE. Mr. Speaker, a few short days ago on Memorial Day we, as a nation, devoted our thoughts and prayers and words to memorializing those who have died in the service of their country. On this Memorial Day was delivered in my home town—Fort Wayne, Ind.—an address by our good Mayor Harry W. Baals which to me expressed so eloquently the gratitude of our Nation to our soldier dead and the purposes for which they gave up their lives that I desire to call it to the attention of all who read these pages. I am sure you will find in his words, as I did, an inspiring statement of the challenges we must meet now and in the days to come if the many words spoken across this land on Memorial Day are to be more than static and futile thanks to those who have sacrificed their lives and their futures for the protection of our individual rights and liberties. The price in precious lives which that noble purpose has exacted can only be redeemed by our constant vigilance in carrying on where they left off.

Yes, the price has been high. The price will be larger. From every town, every city, every neighborhood of this vast land some of our finest youth have been taken. Out of Fort Wayne, a city of 130,000 people, 12,511 have gone into service and of this number 60 percent have seen duty overseas. Casualties suffered have been 888, and 283 of these have given their lives, a casualty record well above the national average.

This is the record of just one town, but every town has paid its price. Recounting the greatness of the sacrifice should instill in all of us a feeling of the enormity of our obligations. We must carry on the war to final victory with all possible speed. We must do all we can to ensure that out of our present San Francisco deliberations will come the machinery on which we may base hopes for continued peace. And we must fight at home as they have fought abroad to keep America free and strong.

Fort Wayne is paying its share—and more—for the right to live in peace and freedom. Fort Wayne has done its utmost to see that those who do return from service are given all possible assistance in readjusting themselves to civilian life. The Veterans' Aid Commission established there has won Nation-wide acclaim as one of the best, if not the best, system for rehabilitation of servicemen in the country. No matter how extensive or well-intended the legislation we here enact for providing for our deserving veterans, we cannot properly discharge our responsibilities to them unless the service is administered on the community level. Fort Wayne has gone beyond the community level by putting its veterans' affairs administration on a neighborhood level. In addition to a large, main information center for servicemen, 11 neighborhood branches have been established in fire stations in every part of the city in order to facilitate assistance to servicemen by trained and capable people who are devoted to their welfare.

Just as the good people of Fort Wayne are well aware of and fulfilling their immediate responsibilities to the servicemen who return, so also are they aware of their ideological and spiritual duties so well expressed by Mayor Baals in this address.

Once each year, this magnificent Nation of ours by Presidential proclamation, sets aside one day for paying deserved tribute to those gallant Americans who have given their lives in the service of their country. I suppose no public speaker on this occasion ever feels anything but a humble appreciation of the fact that his theme is much too sacred for any attempted eloquence. The eloquence of a human being who lays down his life—the most precious possession that he has, on the altar of his country, is far too great to be matched by anything so cheap as words or phrases.

Over this world today, there are millions of our finest young men plodding wearily but courageously through the literal hell of modern warfare in order that you and I may know freedom from a tyrant's cruelty. Today, there are hundreds of thousands of fine American homes in which the footsteps of loved ones will never again be heard, and there are other homes by the hundreds of thousands who likewise feel sorrow but in a lesser degree. This situation is one that would inspire a deep humility in the most brash of public speakers.

CONSOLES PARENTS OF DEAD

It is very difficult to say any words that will console the parents of those who have died in the war in which we are engaged, and which ended only in part on VE-day. To these parents, one fact stands out alone in the consideration of their stark grief, namely, their boy is no longer alive.

But, if I may say just a word to these parents, I would like to do so. We must not forget that our destinies at any time are always within the hands of the God who created the world, and who both gives life and takes it away.

We must continue to adhere firmly to our American principles of faith in the wisdom of God. We have a right to be proud that our sons were not cowards. We have a right to feel inspired that our sons still cherish a sense of duty to their country, even to the extent of giving their lives for it.

DEATH ONLY IN HUMAN SCHEME

We have a right to feel proud that nowhere in the annals of American history has there ever been a lack of a high spirit of valor on the part of those Americans who fought on land, sailed the seas, or flew in the air. Death is a tragedy only in the human scheme—not in the divine scheme.

It runs against the usual course of Nature for the old to bury the young, and for parents to kneel at the grave of a child, but no parent forced to choose between losing his son in honor, and having him in dishonor, would prefer the latter.

We, as parents or relatives of the men who have sacrificed so nobly and so generously in this war, have more than an obligation to mourn or to praise. We have an obligation to these warriors to see to it that the torch extended to us by their falling hands is never extinguished.

What is that torch? That torch is the American way of life—not merely the American material way of life, but the American spiritual way of life. That torch is the torch of human freedom which says that man is sacred because—whether rich or poor, white or black, educated or uneducated, he possesses a human soul which God alone created and which to Him alone belongs.

MAN A CREATURE OF GOD

In this war, many Americans may have frequently asked themselves—what is this war all about—what are the basic issues involved?

It is not for me to answer these questions, but I will insist that the most important issue that every American must fight for, either in war or peace, is the right of the

individual to command respect as a property of Almighty God.

Hitlerism was wrong basically because it denied the dignity of the individual human being.

Mussolini's false philosophy was wrong for the same reason, and the philosophy of communism is wrong also for the same reason.

In this country, any political or economic movement is likewise wrong that begins with the proposition that the welfare of the state or the group, is more important that the welfare of the individual man.

In this country, we have always uniquely insisted that the state exists only to serve man—that nothing is good for all which denies liberty unjustly to a single individual.

BLESSED WITH DIVINE INSPIRATION

When Thomas Jefferson wrote the greatest document even penned by the hand of man, he based the American system of liberty on just a few basic principles. But what basic principles they are. Namely, man's creation by God, man's equality before the law, and the existence of certain self-evident truths.

We were blessed with a divine inspiration when this country was formed. We have been blessed by that same divine inspiration ever since. Principles that are true are unchanging, and what Thomas Jefferson gave us in a political philosophy will be as true thousands of years from now as they were when he wrote them, or as they are now.

The inherent totalitarian germ which we are fighting on a hundred world-fronts today, is not something which can ever be isolated in any one country or any one part of the world. We have it here now as we had it when the Constitution was framed. We will always have it, but we need never fear it as long as we remember that our traditional way of life is the cure for it.

CITES FRISCO CONFERENCE

Right now, there is a tremendous world conference going on at San Francisco, in which the world's lovers of peace are vitally interested. There at San Francisco in the making, is what all of us hope will be the guarantee of future peace and the preventive of future wars. We must not ask too much of that Conference, but neither on the other hand must we ask too little of it.

We must not ask for a world program from San Francisco which conceives all men as angels and all nations as working arms of Providence, but neither should we permit to come from San Francisco any program which substitutes the principle of might for the principle of right, or which substitutes the doctrine of secularism for the doctrine of man's spirituality.

In these days it has become almost blasphemous in some quarters for an American to stand up and say that he is for America first. But to me the most sacred words in our language are these two.

On all our fighting fronts in this war men have fallen either dead or injured, not for some remote international abstraction but for their native or adopted country.

DIED FOR OUR COUNTRY

They sacrificed their lives not that some home in a remote country might be protected, but that their own home might be protected. They died not to save persons they never knew in some far-off land, but to save their loved ones and their friends at home.

We would be less than loyal to their memory if we ourselves did not try as their grieving survivors to devote our last ounce of strength to the perpetuation of American ideals, American institutions, and American interests. A nation is a family, and it is not a matter for shame that one has obligations to his own family which he does not have to another family living on a different street.

Someone said recently that Hitler was wrong when he said that the whole world belonged to Germany, and that we are equally wrong when we permit anyone to say that the United States is the property of the entire world.

PLEADS FOR AMERICA FIRST

No nation in these days can adopt an attitude of indifference to the fate of the world. We never have adopted such a view and never shall, but neither in these days should anyone of us forget to place first things first by denying that American self-interest is proper.

We must keep forever the proper balance of American traditions which says that we should live as interested citizens of the world, but not as meddlesome busybodies in the fates of all peoples.

It was to obtain a sanctuary from injustice and oppression that many of our forefathers came to this country. It was for us to provide such sanctuary, but it was never for us to attempt guaranteeing that such sanctuary shall always be available in all the other countries of the world.

Even were it desirable that we sit in a seat of judgment as arbiter of the entire world's destiny, it would not be an objective capable of attainment.

We are neither guilty of all the sins of international intercourse in recent years, nor are we capable of preventing a repetition of those sins in the future.

MUST NOT SACRIFICE FREEDOM

There is one test to be applied to almost any proposal offered to the American people for the guaranteeing of world peace. Does that proposal require us to sacrifice some essential part of our freedom of action as a sovereign nation?

If it does, it is contrary to our best national interest. No one, least of all myself, has any desire for an aggravation of the kind of nationalism which tries to run roughshod over other countries, but I admire and love the kind of nationalism which made Russia turn back the Nazi hordes at the gates of Stalingrad, and the kind of nationalism which made the Poles keep on fighting even after they were licked.

It was American nationalism that inspired our campaigns in Italy, Africa, France, Germany, and the South Pacific. And if I understand the prevailing sentiments at San Francisco now, there is faith in the security of Western Hemisphere solidarity on the basis of nationalism in the Americas, both South and North.

MUST KEEP INHERITED TRUST

But, whatever happens at San Francisco, we as the living must keep our inherited trust with the dead by devoting every fiber of our physical, mental, and moral beings to keep America free and in a position where by preserving its own health it may perform its necessary work in the world.

Recently a very humble man who became President of the United States, pleaded with the American people to pray for him in order that this Nation may stay on its course.

All of us here in the presence of the dead, and feeling the consciousness of our own unimportance as human beings, might well join with the spirit of the President's request and ask similar prayers for all of us.

The Heroic One Hundred and Sixth

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. LUDLOW. Mr. Speaker, I present for the CONGRESSIONAL RECORD a copy of a letter I have written to Secretary of War Stimson suggesting that a Presidential citation be awarded to the One Hundred and Sixth Infantry Division for the great valor it displayed during the recent Rundstedt drive in Europe. My letter follows:

JUNE 4, 1945.

Hon. HENRY L. STIMSON,
Secretary of War,
War Department,
Washington, D. C.

DEAR MR. SECRETARY: It has seemed to me and to many others with whom I have conferred that the splendid achievements of the One Hundred and Sixth United States Infantry Division in Europe and the outstanding nobility of its performance well entitle that division to a Presidential citation.

It is beyond my poor powers of language to describe adequately the accomplishments of the One Hundred and Sixth Division in repelling Rundstedt's mechanized legions in one of the fiercest and most critical episodes of the war or to portray the glorious record it made during its gallant stand in the Ardennes at the center of the German drive, but even if I could it is not necessary for the purposes of this letter for you, sir, know and can visualize better than I the division's unsurpassed valor and its magnificent contribution to the success of American arms. I need not remind you of your own recognition of the performance of the One Hundred and Sixth Division in a statement listing the division's total casualties at 8,663 and closing with this deserved tribute:

"It was the contribution of the men of this division and of other less heavily hit divisions in the area which helped to make possible the halting and repelling of the enemy."

For three awful days this division bore the hammer blows of Germany's crack troops, taking almost one-fifth of the total casualties of the Battle of the Bulge. To quote from one commentator:

"It held its ground until half its force had been rolled under the wheels of the German charge."

The superlative bravery exhibited by this division in the crucible of war thrilled America and wrote a page of history that will be an inspiration to our children and our children's children down to the remotest generation.

The Indianapolis Star gathered from many reliable sources the epical story of the One Hundred and Sixth Division and printed it in pamphlet form under the caption "The heroic One Hundred and Sixth." The information contained in the pamphlet was collected and assembled by the Star's Washington correspondent, Mr. Jack Reed. It tells the story interestingly and accurately and I enclose a copy, knowing that you will enjoy reading it. This division was trained at Camp Atterbury and many of the boys of the division were from Indiana and surrounding States, and when German propaganda blared forth the report that the division had been decimated by Rundstedt's blow at St. Vith our people were torn with agonies of grief and fear. The sorrow caused by the actual losses will be tempered with the solemn satisfaction of knowing that the division's sacrifices are recognized and appreciated if this request for a Presidential citation is granted.

In presenting the request I feel that I am but the humble instrument of thousands upon thousands of our people who would like to see the division officially recognized in this appropriate manner.

I am writing, therefore, respectfully to request that you initiate whatever proceedings may be necessary to confer on the One Hundred and Sixth United States Infantry Division a Presidential citation for extraordinary valor.

Very sincerely yours,

LOUIS LUDLOW.

The Japanese Problem

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include a very interesting, timely, and thought-provoking editorial on the vexing Japanese problem.

A good friend of mine, Mr. George Dunn, editor of the Half Moon Bay Review in Half Moon Bay, Calif., has written an editorial on this subject, which has received a great deal of attention throughout the Nation.

I am hopeful that the State Department will find Mr. Dunn's suggestions of value, and I commend his editorial to my colleagues for their consideration. The editorial follows:

THE JAPANESE PROBLEM

There are so many people with so many suggestions as to what should be done with Japan, after this war, that we hesitate to make any further comment. We all feel that so many experts are working on this very grave problem that it is, to say the least, presumptuous on the part of any outsider to feel that he has an idea which hasn't already been thoroughly probed. Nevertheless we venture to make a suggestion which may have some worth. Since we have not come across this idea on the outside and since it looks so good to us, we give it to you for your careful consideration.

Invade the Japanese homeland and cut it off from the outside and let the American and Allied Navies keep watch until a democratic regime is assured.

Bring the Emperor and all other war criminals to trial. Replace the tycoons by democratic minded Japanese. Destroy the navy, merchant marine, and war factories, get together all the leading, trustworthy Japanese-Americans, graduates of our universities and all the best from the Japanese who fought in Italy and give them all the key positions in Japan.

Send Chiang Kai-shek all the necessary material to take both Manchuria and to deal with other antagonistic forces. Get this program on the airways and send our boys home.

Under these new Japanese conditions, many if not all the Japanese-Americans might prefer to return permanently to their homeland. This would solve a serious Japanese-California difficulty.

Alien Property

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. BECKWORTH. Mr. Speaker, I have introduced House Joint Resolution 173 declaring the policy of the United States with respect to use and disposition of enemy property. The resolution provides that it shall be the policy of the United States to assume and exercise full and complete ownership over all enemy property heretofore or hereafter vested in the United States, and to hold, use, manage, administer, sell, lease, or otherwise dispose of such property in the interests of nationals of the United States who have claims against any enemy country or countries arising out of any act or omission of such country or countries in, or in connection with, the present war, to the end that such claims may, as soon as practicable, be satisfied to the fullest possible extent.

I am sure it is timely to adopt a definite policy for this country with reference to enemy alien property over which we now exercise control. Germany was able to get back some 80 percent of the property which was placed under the jurisdiction of the Alien Property Custodian as a result of the First World War. Moreover, the facts will disclose that many claims of our nationals were never settled. I am one who is interested in seeing that every person in the United States who has a legitimate claim against Germany or Japan shall have that claim adjudicated and satisfied. It is my judgment that if this Nation does not have a firm and definite policy concerning this problem that the outcome could possible be similar to the result which obtained after the World War. Furthermore, those individuals who have been sent or gone to Germany or Japan not by choice and who have suffered injury thereby should have their claims satisfied before those who sought to profit by doing business with people of the two countries that have expended so much energy and effort to destroy America.

Fraternity and Postwar Planning

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1945

Mr. THOM. Mr. Speaker, I am reproducing herewith a thoughtful article contributed to the Moose magazine on postwar planning by our colleague the Honorable WILLIAM A. PITTENGER, of Minnesota:

Activity in the lodges of the Loyal Order of Moose has never been more pronounced, and all reports indicate a high point in membership increase and financial assets. All lodges have shared in the war prosperity. The Loyal Order of Moose has been fortunate in this period in having as executive officers men like Malcolm R. Giles, Paul P. Schmitz and others to work out the great program which places the Moose fraternity in its present unique position.

When the war clouds pass away and peace on earth returns, the Moose will be vitally concerned with the program of changing a social and economic life, built up and carried on for war purposes, back to a domestic and peacetime basis. Already the leaders of this fraternity are giving serious consideration to this future situation. Every lodge of our fraternity is greatly interested in postwar planning. Unless steps are taken now, looking forward to industrial and economic development of our own country, every seciton of our land will be faced with men and women who are seeking jobs.

DIFFICULTIES TO BE MET

When the time comes to change our American industrial and agricultural life from a wartime economy to a domestic peacetime economy we will face a great many difficulties if the problem of unemployment is not solved. During this war we have learned the art of production. We have been able to produce goods in unprecedented amounts, twice as much as in 1929, and four times as much as in 1932. In spite of the fact that one-half of our national economy has been devoted to the prosecution of the war, we have been able to produce enough civilian goods and food to satisfy our essential needs, in an amount almost equal to that of the best peacetime year, and notably in agriculture surpassing any previous year. We have been able to do this because we have given employment in production to nearly 55,000,000 people, in addition to 12,000,000 men and women under arms.

We must, we cannot fail, to mobilize our total productive capacity after the war for the reconstruction of our country just as we have been able to do during the war for the defense of this continent and our institutions. We can do this by arranging our affairs so that we are able to supply constructive and productive employment to people at least equal in number to those now employed. If we allow our total employment to fall below 50,000,000 people, you can expect a depression. Demobilization of the Army is going to bring into the labor market large numbers of our young people who must be given opportunities for jobs. If we assume that there will be retirement from the labor market because of age or preference, sufficient in numbers to equal the number of soldiers returning to civilian life, then full employment means that we must offer opportunities for employment to between fifty to fifty-five million people. If we can do this, we can expect a national income of $165,000,000,000.

STANDARD OF LIVING

This will mean an improvement in the standard of living throughout the country unequaled in the history of the world. It is only by this means that we will be able to forestall a depression and keep our country strong in comparison and in competition with other countries no matter what form of government they choose to live.

Full employment and high purchasing power is as essential for he farmer as it is for the worker in the cities. The principal methcd whereby farm surpluses can be averted in the future is to give the people of this country the purchasing power with which they can increase their consumption of farm products as has happened during this war. The salvation of our democratic institutions depends upon our ability to maintain such a scale of employment and production. If we fail in this then you can expect internal unrest, and insecurity to the national debt. You can expect decline in foreign trade and depressions in other countries. Under such dismal conditions it would be difficult if not impossible to sustain the best devised international machinery for security and peace. It is axiomatic that the stability of world economy and consequently the political systems in other countries will depend upon our ability to maintain prosperity in the United States.

What must we do in order to maintain employment and production for our own welfare, for our own people, and for the stabilization of the world?

First. We must control the disposal of surplus goods accumulated during the war

in such a way as not to interfere with current production and markets. This is one of the most important legislative problems now before the Congress of the United States.

Second. We must facilitate the conversion of war plants to peacetime production to the extent that they are adaptable. This must be done under private ownership and control, not by monopoly, but by giving opportunities for more Americans to engage in business enterprise, including credit assistance if necessary. In other words, we must foster the development of small business. We must never allow plants to be scrapped if there is economical peacetime use for them.

Third. We must encourage public and private agencies to engage in the renovation and maintenance of facilities which have been allowed to depreciate during wartime as a result of the shortage of materials and labor. Our highways, railroads, real property, both residential and business, power systems, etc., have been sadly neglected and necessarily so during the past 4 years, and with proper financial help the condition of these facilities must be brought up to normal. This can furnish a great amount of employment.

Fourth. We must undertake the construction of new highways, dwellings, airports, river-basin developments, reforestation, and other worth-while and wealth-creating projects.

In this category there are many projects in the preliminary stage of planning which should be pressed forward to the blueprint stage and legislative authorization. Among these are numerous waterway, power, and flood-control projects now before Congress, which are designed to improve our land, to save farms and property against floods, and to provide cheap water transportation and cheap power.

In approaching a legislative program to repair and reconstruct our country, we must not be sectional in our viewpoint, but national. A few examples: Saving the lower Mississippi Valley from the devastation of floods, and the destruction of farms is nearly as important to the Northeast, for instance, which buys the products of the farms and sells to them the products of its factories, as it is to the people of the valley immediately concerned. Similarly the creation of new industries and employment for a growing population in the Northwest is important to the steel factories of the Middle West, the shipping companies of the East and the railroads which traverse our country. For an expanding and prosperous Northwest will be a needed market for the production of other regions of the country.

Government Should Inaugurate Support Prices on Oats

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. HAGEN. Mr. Speaker, I have received considerable correspondence relative to the advisability of inaugurating a support price for oats.

This is one of the big grain crops in my part of the country. Farmers are becoming discouraged over the prospects of making any money out of oats. The price fluctuates up and down to such an extent that the producer often loses money on his crop. Because this crop produces one of the most essential feeds for livestock in the Northwest and throughout the country, it is important that increased production be encouraged.

I am reprinting herewith a letter which I received from Mr. Eugene Sullivan, vice president of the Norman County Farm Bureau, Ada, Minn.:

NORMAN COUNTY FARM BUREAU,
Ada, Minn., May 28, 1945.

The Honorable HAROLD C. HAGEN,
Representative in Congress,
Ninth District,
Washington, D. C.

MY DEAR MR. HAGEN: In answer to your letter of recent date, concerning the support price for Government loan on oats, I find the arguments that are used against support price are really arguments for it.

Argument 1 is that it is a feed crop, largely fed where it is produced. This is not the case. The facts herewith submitted should prove the incorrectness of this statement. The Lockhart, Minn., elevator handled 131,000 bushels of the 1944 crop. Of this, only 1,000 bushels were sold locally. The other 130,000 went on to Minneapolis. One of the elevators in Ada bought 193,335 bushels of 1944 oats. Of this amount, 179,300 bushels were shipped out. Mr. O. N. Bodding, manager of the Ada Elevator, informs me that the volume of the past year was only half the normal marketings, due to floods and excessive moisture. He also states that less than 10 percent of the grain marketed here is resold for feed in the immediate area.

It would be perfectly all right if every farmer fed all the oats he produced. But is it fair for one farmer to grow oats and sell on the speculative market for some other man to feed and produce products which are protected and subsidized such as poultry and dairy products? It seems strange that nearly every other farm commodity is sold on a support price when next to corn, oats has the highest bushel production of any farm crop. This leaves the oat farmer at the mercy of the speculator and the other powers that enter into price determination. It is interesting to note that when the oat crop first came on the market last fall, oats sold for 62 cents here in the county. It soon dropped to 39 cents. During seeding this spring it was up again to 67 cents. Now it is down to 50 cents and below.

As to the importance of the oat crop, the USDA figures show that during the past 25 years the production of oats has dropped below a billion bushels only four times. According to Oswald Daellenbach, Norman County agricultural agent, about one-fourth of the total crop acres in the county is seeded to oats. This represents the largest acreage in the county of any single crop.

Unless something is done to protect the price of oats, the farmers of this county and elsewhere will plant their acres into crops which have a support price. This may create a serious shortage in this very important feed crop.

I am a firm believer in the quotation, "The rights we demand ourselves, we must concede to others." This can be done by giving us a support price on Government loan on oats the same as is done on other crops.

There should be no place in our agricultural life for the gambler, the speculator, or profiteer.

Very truly yours,

EUGENE SULLIVAN,
Vice President, Norman County Farm Bureau.

King Haakon Returns—OWI Has Done a Good Job in Norway

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. HAGEN. Mr. Speaker, King Haakon VII has returned to his homeland of Norway today. Norwegian flags adorn the buildings and drape the streets of Oslo. The people of Norway rejoice on this Thursday, June 7, their symbolic day of complete liberation. Today is a national holiday in Norway.

The Office of War Information, of our own United States, has helped to restore Norwegian liberty through the power of the written and spoken word. I know the influence of news upon Norway and its freedom-loving people. I know it because I once edited and published a Norwegian-language newspaper—the Vesterheimen—at my home town of Crookston, Minn.

Norwegians wanted to know about America even when they were under the cruel domination of the Nazis. They want to know about friendly America at this very moment and every day. Yet, Norwegians are selective in their judgment of news. They will not accept as facts either isolated news reports or an unbalanced news file. They are apt to reject news about America which reaches them by circuitous routes, from the major cities of Europe. Norwegians are direct people and they want direct news. They are quick to discover when they are told half of a story or even nearly all of a story. They want the best composite news picture of the whole of America that they can get.

I believe that the news needs of the Norwegian people concerning the United States can be best met by the Office of War Information.

It would be disastrous to these people and to their splendid relationship with our people if, after subsisting on a news diet of unimpeachable accuracy, they would be fed slanted, over-emphasized news. To arouse unwarranted expectations among them would be a greater catastrophe than holding out no expectations whatsoever. To inform a people whose national characteristics are restraint and dignity, dignity and restraint must be employed. In this manner they must be told of the development, the problems, the social progress, the intellectual achievements, the agricultural and industrial achievements of America during the five long years when the Nazis occupied their country. The American way of thinking concerning world issues must be explained to them impartially—not in small segments, but in entirety.

The OWI must be kept on the job. The informational task of reestablishing the strong ties between Norway and the United States under freedom cannot

wait for the creation of another governmental information agency, or the substitution of private information agencies. It must go on as the OWI is going on, without interruption. The American news link across the Atlantic to Norway was, is, and it must continue to be maintained.

What applies in our informational relations with Norway also applies in our informational relationship with our allies and with other liberated nations everywhere. It requires the telling of the whole American story by Americans for Americans so that false impressions may be corrected. In order to live together in the family of nations, we must understand each other.

The Office of War Information has the facilities, the experienced personnel and skill acquired in the use of truth-telling methods to do this job and to do it well. I am going to support its continuance and vote for adequate funds to carry on its work.

Urges Increase in Salaries for Federal Public Officials

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution offered at the meeting of the Federal Bar Association of New York, New Jersey, and Connecticut, May 18, 1945, Bankers Club, New York City:

Whereas owing to the natural growth of the population of the United States, the great development of its industries, and its extraordinary progress from the time when it was brought into existence in 1789, the Federal Government has become more complicated and it is much more difficult than ever before to fairly and properly administer it; and

Whereas the conscientious performance of the duties of our Senators, Representatives, and judges requires much more time, effort, skill, ability, and responsibility than ever before, it is not more than just to increase the salaries of certain of our Federal public officials upon which this great responsibility now rests.

In view of the foregoing situation, it was, on motion of Edward A. Alexander, duly seconded by Aaron Lasser,

Resolved, That it is the consensus of opinion of the Federal Bar Association of New York, New Jersey, and Connecticut that the salaries of Members of both Houses of Congress should be increased at least from $10,000 per annum to $15,000 per annum, and of our Federal judges to $15,000 per annum; and it was further

Resolved, That it is the consensus of opinion of our association that the services now being performed and to be performed by the above-named Federal officials have become proportionately of greater importance than those to be performed by State officials, and that the problems and questions arising from time to time which the above-named Federal officials are compelled to solve and decide have become of much more importance than ever before in the history of our country and such officials are justly entitled to the moderate increase in salaries mentioned in this resolution; and it is necessary to increase their salaries, if we wish to attract to such offices men and women of great ability, honesty, and culture, as the life of our great Republic and democracy may in the future depend upon the personnel of our important Federal officials; and it is further

Resolved, That the president of our association, Henry Ward Beer, be and he hereby is authorized and directed to take whatever lawful steps may be necessary to see that the objects of these resolutions are carried into effect, and to appoint as many members of this association, whose services he considers to be necessary for the purpose, to aid and assist him in urging upon the public and the proper officials to carry the objects of these resolutions into effect.

Subcommittees on Foreign Affairs, Committee on Geographical Areas

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the Committee on Foreign Affairs of the House has been divided into five subcommittees, each with a subcommittee chairman, and each with a geographical region of the world in which it will specialize and to which it will devote concentrated attention.

This plan has been in the process of development by the committee for several months, and the final plan was worked out by a subcommittee composed of the gentleman from West Virginia [Mr. KEE] and the gentlewoman from Ohio [Mrs. BOLTON], and was unanimously approved by the full committee, after having been submitted to and approved by Chairman SOL BLOOM and the ranking minority member of the committee, Congressman CHARLES A. EATON, who are now serving as delegates to the San Francisco Conference.

Chairman BLOOM will serve as ex officio member of each of the five subcommittees.

The increasing volume and complexity of world problems has necessitated this arrangement for specialized study of the economic, political, and social conditions of the various regions of the world. Each subcommittee will, therefore, give such specialized study to the particular region assigned to it with a view to a more valuable contribution to the work of the whole committee.

The list of subcommittee assignments, as officially approved by the committee, follows:

SUBDIVISIONS OF FOREIGN AFFAIRS COMMITTEE

1. The Far East: JAMES P. RICHARDS, of South Carolina, chairman; DANIEL J. FLOOD, of Pennsylvania; HELEN GAHAGAN DOUGLAS, of California; JOHN M. VORYS, of Ohio; LAWRENCE H. SMITH, of Wisconsin.

2. Eastern Europe, the Near East and the Balkans: LUTHER A. JOHNSON, of Texas, chairman; THOMAS S. GORDON, of Illinois; JOSEPH F. RYTER, of Connecticut; KARL E. MUNDT, of South Dakota; FRANCES P. BOLTON, of Ohio.

3. Western Europe: JOHN KEE, of West Virginia, chairman; JOHN S. WOOD, of Georgia; EDITH NOURSE ROGERS, of Massachusetts; JAMES W. WADSWORTH, of New York; CHARLES L. GERLACH, of Pennsylvania.

4. Africa and the Mediterranean problems: JOSEPH L. PFEIFER, of New York, chairman; W. O. BURGIN, of North Carolina; WIRT COURTNEY, of Tennessee; BARTEL J. JONKMAN, of Michigan; CHESTER E. MERROW, of New Hampshire.

5. Western Hemisphere: PETE JARMAN, of Alabama, chairman; EMILY TAFT DOUGLAS, of Illinois; JAMES W. TRIMBLE, of Arkansas; CHARLES A. EATON, of New Jersey; ROBERT B. CHIPERFIELD, of Illinois.

SUBDIVISION OF FOREIGN AFFAIRS COMMITTEE ACCORDING TO GEOGRAPHIC AREAS

1. The Far East: China, Japan, Korea, Manchukuo, Mongolia, Afghanistan, Thailand, French Indochina, British India, Nepal (Bhutan), Burma, Malay States, Australia, Territory of New Guinea, Tasmania, New Zealand, Sarawak, British North Borneo, Netherlands East Indies, Philippine Islands, Portuguese Timor, British island possessions, French island possessions.

2. Eastern Europe, the Near East, and the Balkans: Russia; Baltic States: Finland, Estonia, Latvia, Lithuania; Poland; Czechoslovakia; Balkans: Rumania, Bulgaria, Greece, Yugoslavia, Albania, Hungary, Austria; the Near East: Turkey, Iran, Iraq, Lebanon, Syria, Trans Jordan, Palestine, Saudi-Arabia and territories of Arabian Peninsula, Egypt.

3. Western Europe: Iceland, Great Britain, Norway, Sweden, Denmark, France, Belgium, The Netherlands, Luxemburg, Lichtenstein, Switzerland, Italy, Spain, Andorra, Portugal, Germany.

4. Africa and the Mediterranean problems: Spanish: Spanish Morocco, Rio de Oro; French: Morocco, Algeria, Tunisia; French West Africa: Senegal, French Guinea, Ivory Coast; French Equatorial Africa; French Somaliland; Madagascar; Italian: Italian East Africa, Libya, Ethiopia; Portuguese: Angola, Mozambique, Portuguese Guinea; Belgian Congo; Liberia; British: Gambia, Sierra Leone, Gold Coast, Nigeria, Sudan, British Somaliland, Kenya, Tanganyika, Rhodesia, Bechuanaland, Union of South Africa.

5. Western Hemisphere: Canada, Greenland; South America: Venezuela, Colombia, Ecuador, Peru, Bolivia, Chile, Argentina, Paraguay, Uruguay, Brazil; the Guianas: British, Dutch, French; Central America: Guatemala, Salvador, Honduras, Nicaragua, Costa Rica, Panama; Mexico; the Caribbean area.

Our National Anthem

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1945

Mr. LUDLOW. Mr. Speaker, I have received a communication from Mr. James I. Dissette, a distinguished and scholarly citizen of my home city—Indianapolis—in which he submits a most interesting argument in favor of substituting America for the Star-Spangled Banner as our national anthem. Because of the interest that attaches to Mr. Dissette's sub-

ject and his entertaining way of presenting it I have secured unanimous consent for the insertion of his article in the CONGRESSIONAL RECORD.

It is as follows:

OUR NATIONAL ANTHEM

Recently our esteemed fellow townsman, Rev. Charles Fillmore—a man who has achieved world-wide and lasting fame for his valuable contributions to our hymns and sacred songs—in a card in our local paper has made the suggestion that our beautiful hymn America be substituted for the Star-Spangled Banner as our national anthem. The suggestion deserves thoughtful and favorable consideration.

The Star-Spangled Banner is not an anthem. It centralizes and extols a critical situation in the War of 1812. The remoteness of that situation, the mellowing influence of time, and the overshadowing importance of even more critical situations in subsequent wars have all tended to relegate this happening of the War of 1812 to its proper place in the records of our early history, and there it should be allowed to rest—not resurrected and revived as a present-day incident to be paraded before patriotic gatherings and public assemblages.

The Star-Spangled Banner, when played or sung before a public assemblage, fails to touch a responsive chord in the hearts of its hearers that a national anthem should do. The assemblage stands respectfully—and silently—through the rendition of one stanza. Few participate in the singing because the air is beyond the range of the average untrained voice and because they do not know all the words of even the first stanza, and probably have never heard the three remaining stanzas. (Can you recite from memory even the first stanza?)

Just the contrary is true of America. The words of that beautiful hymn are comprehensive in scope, embracing our whole Nation and domain; it has dignity and majesty in its structure, simplicity in its expression of sentiment. It is an anthem of grateful praise and thanksgiving to Almighty God for His great gift of freedom, couched in such simple language as to touch a responsive chord in the hearts of all hearers, and these become eager and joyful participants in the rendition. It never grows old, applying today with greater force than when first made public more than 100 years ago (in 1832). The average audience is gratified when given an opportunity of joining in the singing of not one but all four stanzas; the air being so simple, the average untrained voice can easily participate. Love of country, love of homeland, love of home is innate in every human breast, hence it is easy to understand why this beautiful hymn, America, appeals so strongly to all our people.

Objection has been made to Reverend Fillmore's suggestion on the ground that the air to which America is sung is the same as that of the British national anthem, God Save the King, and that the air belongs to England; that we would be borrowing it from England. But is this true? In a discussion of this matter some years prior to the adoption by Congress in 1931 of the Star-Spangled Banner as our national anthem, the assertion was made—and never refuted—that the air originated as a folk song of a disappeared and forgotten people; that England rescued the air from passing into oblivion, and adapted it to the words of her national anthem. The air is also claimed by Germany, by Switzerland; Russia formerly used the air as her national anthem. Apparently, the air belongs to the world, and we have the same right to use it as any other nation.

Our Nation is founded upon the declared principle of human freedom and equality, and under that God-given, beneficent principle our Nation has acquired outstanding prominence among the nations of the world. Due to this principle, individual freedom and initiative have been encouraged and developed as nowhere else in the world. When the demands of the present World War II were made upon us, we had the capacity to respond to every demand in a way that amazes and staggers the world. In view of this, would it not be peculiarly appropriate as a postwar action for Congress to rescind its action of 1931 and substitute as our national anthem America, an anthem in which our whole Nation heartily joins in singing praise to Almighty God for our great blessing of freedom and for our preservation?

This God-given principle of human freedom should be indelibly imprinted on the hearts and in the minds of our boys and girls in our grade schools of today, so that our great Nation will be safe when our flag of freedom passes into their hands and to them, under the guidance of an All-wise Heavenly Father, becomes the responsibility of seeing that, in the words of our immortal Lincoln, "this Government of the people, by the people, for the people shall not perish from the earth." To this end, all of our grade school children should be required to memorize and frequently join in chorus singing of this beautiful anthem America.

JAMES I. DISSETTE.

INDIANAPOLIS, IND., *February 11, 1945.*

The Future of Boston Industrially and Commercially Is What Through United Action the People Make It

---

EXTENSION OF REMARKS

OF

HON. JAMES M. CURLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. CURLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at meeting of businessmen, Stuart Street, Boston, Mass.:

Prior to the advent of steam-propelled ships, sailing ships flying the American flag were welcome visitors to every port of the world, and these ships were largely constructed in New England. The outstanding designer was an east Boston man, Donald McKay, and one of the ships designed by him held the record for passage from Boston to Europe for more than 20 years after the coming of steam-propelled ships. One gets some idea of the character of the ships and the courage and skill of the crews when we learn of the slogan of the captain of one of the ships was "Boston to Melbourne or the hereafter in 60 days" and not infrequently the journey was made in 58 days. Would that we, in our day, had more of the courage, determination, and faith of these brave men who went down to the sea in ships, and the appalling situation now confronting both State and city would not be in evidence. It has been my privilege to be instrumental in securing the sum of $5,000,000 for the improvement of Boston Harbor as a result of which, the channel has been widened to a depth of 1,500 feet with 40 feet in depth at mean low water and extending 5 miles from President's Road to the Boston Navy Yard with a turning basin opposite the Army base rendering it possible for ships to enter and leave on their own power without either tugs or lighters. This represents an advantage equivalent to $25,000 for a round trip by any of the larger ships in use. It has likewise been my privilege to secure from Federal funds $20,000,000 for the completion of the Cape Cod Canal which makes unnecessary the long and hazardous journey around the tip of Provincetown between Boston and New York and which proved of inestimable value in the present war when enemy submarines were operating off the coast.

Unquestionably, these two improvements have been a contributing factor in the selection by the Army and Navy Departments of South Boston as an embarkation port for the shipment of men and supplies to the battle fronts of the world. The great embarkation port constructed by the Federal Government at South Boston representing an expenditure in excess of $20,000,000 should be available for use at a nominal rental by the city for commercial purposes at the close of the war, making possible a real beginning of port development. The solution of the problems confronting Boston has, at least, become the accepted objective of everyone and through unity of action and cooperation commerce can be revived and restored. What has been accomplished in other Atlantic seaboard cities should prove easier of accomplishment in the case of Boston. Perhaps the best contrast is between the city of Boston and the city of Baltimore, Md. Boston is located on the ocean with the most accessible channel and harbor on the entire Atlantic coast while the city of Baltimore is 160 miles from the ocean. Boston and Baltimore are about of equal area. Baltimore, however, has but about one-third the population of Boston. Yet despite this fact, the commerce handled by Baltimore is more than three times as great as that handled by the city of Boston. The carrying of freight through the port of Baltimore has been doubled in the last 20-year period while Boston, with the exception of war activities, has been practically at a standstill. If one were to seek a reason for the situation, it might be found in the fact that both the Commonwealth and Boston have devoted more thought, attention and money to politics rather than to the development of commerce and industry. There is every promise, however, that at last this situation may be changed. Nearly a quarter of a century ago, I advocated not only port development but the development of the airport. Yet there was no support at that time for either of these vital essentials. Today, however, we find substantially every influential agency in State and city united for the carrying out of a program through which commerce and industry and port development may become a reality.

In the case of Baltimore, an enabling act was adopted by the legislature and submitted on referendum to the voters of Baltimore, making provision for the expenditure of $50,000,000 for the development of piers, and it was accepted by the legislature and the people, with the result that Baltimore today has port development and piers second only to New York. To the present time the total investment in port development lines by the city of Baltimore with, as I have previously stated, one-third of the population of Boston in the vicinity of $200,000,000. The Massachusetts Legislature will be called upon shortly to consider an expenditure of $57,000,000 for port development, and an initial expenditure for airport development of $15,000,000, which represents a truly courageous departure from established policy.

It is unfortunate that while Baltimore has been undertaking these courageous and major expenditures with an eye solely to the future, we have been quibbling on matters of lowly consequences and questionable value so far as the welfare of the entire people is concerned. What is true of Baltimore is equally true of other Atlantic coast cities. Philadelphia presents a striking contrast to the public spirit that has been lacking in Boston. During this

period of time there has been complete unity, coordination, and cooperation upon the part of the entire people. Philadelphia, which is located 40 miles from the ocean, has quadrupled its facilities and port business since the close of the First World War. Most of the modern piers of the port of Philadelphia have been developed by the city, there being some 13 constructed since the end of World War I, and the port-development program is still in progress. About one-third of a great program for development of its lower central water front along a 2-mile shore has been completed during the past 25 years.

The city of Philadelphia has likewise expended $40,000,000 for a radial highway serving the port, 250 feet in width and extending for 33 miles along the river front with every known facility for the handling of cargoes with the highest degree of efficiency. Plans have been determined upon for the expenditure, after the present war, of more than $25,000,000 additional for port development, including four large berths capable of providing for the requirements of 20 modern victory size or larger ships. The great Porter Street Municipal Pier in Philadelphia is 900 feet in length and 366 feet in width, constructed of concrete and steel with berths for 4 super ships. The Green Street Municipal Pier is of sufficient size to store 18,000 tons of cargo upon a single floor, while more additional types of piers are available for rental to any shipping. In the matter of facilities for expediting the handling of materials, a grain-elevator has been constructed with capacity of 4,750,000 bushels; also two coal tipples with a capacity of 100,000 tons and two fully equipped piers for the unloading of iron ore.

The city likewise controls some 48 warehouses with a storage warehouse capacity of 78,000,000 feet of storage space. We have some conception of the tremendous strides made by this city, which is 40 miles from the ocean, in order to develop a port of Philadelphia and thereby enrich the business of State and city, when we learn that accommodations are available to the 191 piers, 100 of which piers are served by the railroad lines and some 60,000 feet of berth space.

The grain elevators of Philadelphia are so constructed that it is possible to bag mixed grain, clean of brier, and delivered in bulk on vessels at the rate of 90,000 bushels an hour. The turn-over coal-type dumpers can unload vessels at the rate of 1,500 tons an hour while the tidewater terminal, a port within a port, can load 15 cargo ships at one time, and all served by rail connections with trunk-line facilities. It must be apparent to every thoughtful citizen that the decadence of the port of Boston has been due in large measure to our timidity, since with the best natural advantages we have failed to take advantage of them in the same manner as New York, Philadelphia, Baltimore, and New Orleans.

For more than 50 years on every platform we have proclaimed that Boston is 1 day nearer to Europe than any port on the Atlantic coast and likewise nearer to South American ports, but to the present we have failed to take advantage of this situation. The action of businessmen and public-spirited citizens generally would indicate that at last we have become port-minded. The development of the port is but one step in the movement to revitalize Massachusetts and Boston industrially and commercially, and this port-mindedness must be the business of every industrial establishment not only in Massachusetts but throughout New England and our slogan should be "ship goods through the port of Boston for the benefit of New England."

Today, fully 60 percent of all the goods produced west of Worcester in Massachusetts are shipped via New York. Provided this situation can be revised and the bulk of goods and commodities shipped through the port of Boston, it would mean money pouring into every artery and channel of trade in every section of the entire Commonwealth. What is true with reference to the development of the port of Boston is equally true in the matter of the airport development. Some 15 years ago, or in 1930, as mayor, I extended an invitation to the Congressional Committee on Military Affairs to visit Boston with a view to conveying to the city Governors Island and making it an extension of our present airport. Unfortunately, at that time, due largely to political considerations, there was a lack of public spirit necessary to sustain such a procedure and nothing was done for the development of the airport, which, provided it had been done 15 years ago, would have brought to the port of Boston tremendous wealth during the period of the present. During the past year, money has been made available for the razing of Governors Island, but the work has been conducted in such a leisurely manner that it is still in progress when it should be completed.

During a snowstorm this winter it was impossible to land a plane at East Boston Airport for a period of 4 days, due to the fact that the sole rotary plow utilized for the purpose of clearing the runways had been temporarily shifted to the western part of the State to open up roads in that section. The unfavorable advertising resulting from the failure to clear the runways has done irreparable injury to what should be one of the best airports in the entire Nation when you consider the East Boston Airport via the tunnel is but 5 minutes from downtown Boston and that today it is the most accessible airport in the entire Nation and that an extension of the tunnel facilities to the airport would make it even more accessible, you get some realization of our shortcomings and lack of both vision and initiative. We have been too prone to live in the glories of the past, and our failure to recognize the necessity until the present hour for courageous, aggressive action is unquestionably largely responsible for our commercial and airport decadence.

Happily, there is an indication of a change, and what has been accomplished elsewhere is possible of accomplishment here, and as mayor it will be my purpose to devote my every effort to the promotion of that unity and cooperation that is vital to the achievement of the objectives essential to the prosperity of commonwealth and city.

Forest Resources of the United States

EXTENSION OF REMARKS

OF

HON. CHARLES SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. SAVAGE. Mr. Speaker, I wonder if sufficient thought is being given among us to the relation of the progressively worsening condition of the forest resources of the United States to the problem of full forest and forest industry employment in postwar. I am informed by the United States Forest Service that of our commercial timberland we now have only about 100,000,000 acres of virgin timber left; that, of the remainder, some 280,000,000 acres has been cut over and is producing only a fraction of the forest products which could be produced, and that some 80,000,000 acres has been cut over, burned, and neglected to the point where it is now practically idle. Reports from my own State of Washington, and Oregon, are that 50 percent of the present sawmills, shingle mills, veneer mills, and pulp mills there, will be out of private-owned timber in 5 years, and 76 percent in 15 years. It seems apparent that if we are to have full employment in lumber and allied industries a Nation-wide conservation program, including public action designed to bring about better forest practice on private lands, is indicated. This situation is arousing organized labor in the forest regions as never before. As representative of labor's new interest and attitude in this important matter, under leave granted, I submit for printing in the RECORD a story by W. W. Sylvester which appeared recently in the Union Register, which is owned by the Lumber and Sawmill Workers Union, AFL:

TIMBER BARON PROPAGANDA HIDES FACTS ABOUT FUTURE

(By W. W. Sylvester)

Confronted by repeated public warnings of the United States Forest Service that present logging practices are exhausting timber reserves, publicity experts of lumber associations are flooding the country with reams of booklets, maps, and charts purporting to show that the Government's gloomy predictions concerning the future of the industry are unwarranted. Yet, it is clear from the developments of recent years that operators are not swallowing their own poison.

While the West Coast Lumbermen's Association chides the Forest Service for playing fast and loose with facts, its members are folding up one mill and logging operation after the other, and investing heavy sums in the development of synthetic, molded, and glued-wood products. At the same time the industry is doing very little about reforestation.

A recent yarn in the monthly, Big Trees, issued by the West Coast Lumbermen's Association, starts with the proposition that there are 1,760,000,000,000 board feet of commercial saw lumber in the United States. One of the organization's writers concludes that this supply contains enough lumber to build three eight-room frame houses for each of the 35,000,000 families in the Nation and leave a comfortable margin for numerous other uses. This revelation is expected to pacify all alarmists.

Forest Service analysts start with the same figure. But in a booklet entitled "Some Plain Facts About the Forests" they point out that this statement fails to take into consideration the terrific drain of timber reserves that has taken place in the last 4 decades, and particularly during the present war.

"It is estimated that in 1909 the total volume of saw timber in the forests of the United States was 2,826,000,000,000 board feet," the Forest Service booklet asserts. "In 1938 the estimated stand of saw timber was 1,764,000,000,000 board feet." Recognizing that the 1938 estimate included species and stands not considered merchantable in the earlier estimate, it is safe to say that the total volume of standing saw timber was reduced almost 40 percent in 30 years.

INDUSTRY IGNORES WARNINGS

Industry propagandists also attempt to gloss over the Government warnings by asserting that more than 11,000,000,000 cubic feet of new growth occurs each year. But the figures reveal that the excess of drain over growth is mounting steadily. It is estimated that the drain, including timber removed by cutting, fire losses, destruction by insects, disease, etc., on forests of the United States in 1943 amounted to nearly 17,000,000,000 feet and exceeded total growth by 50 percent. The drain on saw logs was

almost twice the estimated growth. The dispute between Government analysts and lumbermen does not rest on a controversy over facts. Both accept the same basic data. But the operator spokesmen rest their case on the remaining timber. The Forest Service takes the same position, but declares that the rosy predictions of the operators can never be realized unless the industry gives its full support and cooperation to an all-out conservation program.

TOO LITTLE, TOO LATE

It is, therefore, not a question of remaining timber, but of what kind of timber, its location with reference to the cost of removing it, the growth rate and quality of the trees planted to replace virgin stands.

"Why worry," says the lumber publicists, "when only about 2 percent of our present stand of saw timber is cut in any one year." Such an assertion ignores the fact that the cut for lumber is only about 60 percent of the total drain on stands of this quality. In 1942 the total cut for all purposes, including pulpwood, fuel wood, and many other products, was estimated at 3.2 percent of our present total stand. It should also be noted that in 1938 only about two-thirds of the estimated 1,864,000,000,000 feet (the figure used by the operators' publicity experts) of remaining timber was considered accessible for cutting at a reasonable cost.

Contrary to the claim of the operators' associations, the Government has not taken a sour puss attitude toward the future of the industry. It merely declares, candidly, that too little has been done too late to preserve the health and vigor of lumbering as it has existed for the past half century. Private tree farms, forest service officials admit, is a step in the right direction. But they make two salient points with regard to artificial reforestation. In the first place, planting programs will merely serve to offset some of the timber ravishment of the past; and even this will take generations. Secondly, unless present logging practices and wood misuse is not cleaned up, even the most extensive nursery plantings will never mature into merchantable timber in time to permit a measurable continuity of lumber production.

CLOSURES THREATENED

Stepped-up programs for engaging in the production of plactic synthetic, molded, and other wood-derivative products constitutes conclusive proof that lumbermen are not following the claims of their own propagandists that there is a glorious future for lumbering. The operators know it to be a fact that there is even now a shortage of saw logs (regardless of the manpower shortage) for the mills in western Washington. While there may be enough remaining timber to supply immediate needs following the war, the best advice from the regional office of the Forest Service office in Portland indicates that a large percentage of existing mills will be forced to close within a comparatively short time.

STRAW IN THE WIND

Recent closure of Bloedel-Donovan's large cargo mill at Bellingham, Wash., is a straw in the wind. Another is the announced shut-down of the huge Clark-Wilson operation in Portland.

The Forest Service case for timber conservation is predicated on the principle that strenuous efforts must be put forth at once to preserve the remaining stands. USFS officials advocate Nation-wide participation by States and local communities in programs for restocking after cutting, prohibition of wasteful logging methods, providing a reserve of growing stock to keep forest lands reasonably productive, preventing damage to young growth and uncut stock, regulating grazing to prevent tree damage, and prohibiting clear cut except where it is silviculturally necessary, or when the land is to be put to some other use.

DUTY OF UNION

Meanwhile, the Lumber and Sawmill Workers Union has the tremendous responsibility of doing all within its power to see that correct logging practices, fire-prevention techniques, and reforestation programs are carried out in the various forest areas of the Northwest. A great deal has already been done along these lines. Through Northwestern Council and district council resolutions, pressure has been put on many operators to improve their logging methods and engage in reforestation practices. A number of local unions have forest marshals, and nearly all have solicited the support of their respective communities in practical fire-prevention programs.

It would be impossible for union members to overemphasize the importance of continuing and extending such activities, because the protection and proper harvesting of our forests insure the jobs of everyone in the industry.

Better Too Soon Than Too Late

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. REED of New York. Mr. Speaker, today I issued, on behalf of the Republican Tax-Study Committee, composed of 27 Republican Members of the House, a preliminary statement of tax policy.

The committee believes that the time for decision in tax matters is now, in order that some glimmering of the postwar pattern of our American economy may be glimpsed by businessmen and by industry, labor, and agriculture, which must furnish the jobs which will be required on demobilization of the munitions workers at home and the men and women in the armed services.

We were told in the thirties that the system of free enterprise was out of gear because there were too many saved dollars which were idle and could not find employment in private enterprise. We were further told that public enterprise and expenditures must employ these dollars.

The war completely reversed this condition and need. We have put tremendous new purchasing power in the hands of consumers and at the same time curtailed the amount of goods and services available for purchasing. Nearly everyone has, therefore, assumed that there has been a large accumulation of buying power reserve which would generate a new high level of private enterprise operation as the reduced war effort released materials and labor. We were told that under these conditions the important job of government was to preserve a sound public economy and sympathetically to aid private enterprise to expand production and jobs. It was further understood that the reduction of war tax levels was one specific action to demonstrate this sympathetic attitude.

The Joint Committee on Internal Revenue Taxation some time ago requested individuals and organizations to present suggestions and specific ways to proceed in postwar tax reduction. The result was a variety of general and specific proposals. If there was anything unanimous in all of them it was the agreement that the weight of the future tax burden depended on the scale of private enterprise operations and that, as a corollary, an important objective of tax reduction should be to encourage venturesomeness among individuals and their enterprises through the profit motive and likewise give more buying power to consumers so that they could replace the production of war goods with the products of private enterprise.

We had arrived at the time for a great decision.

Soon official Washington raised the cry that the decision relative to tax reduction must await the end of the war. That it would have an inflationary effect unless it was delayed to come when war expenditures were sharply curtailed. There was even the statement that tax reduction hopes were premature, both as to time and degree.

Meanwhile, one war has ended and the decision is squarely before us.

What is happening? There are no clear-cut acts of the Federal Government which commit it to the road of individual enterprise. No positive action on tax reduction either now or later. It is rather the opposite. Proposal after proposal and bill after bill is offered to increase Federal expenditures. We hear much of substantial unemployment in the near future and pleas to immediately legislate, to mitigate this condition by increasing the scope of Federal spending. Is it any wonder that the enterprising citizens who were to be relied upon to risk, to work, and to develop production and jobs in private enterprise are confused or even discouraged?

The proposed increases in Federal expenditures are more inflationary than tax reduction. Federal spending does not create goods and services which people wish to bid for. Tax reduction, however, would spur individual enterprise to produce the goods and the services needed and wanted. Therefore, it would be deflationary. How, then, can official policy denounce immediate steps to tax reduction as inflationary and still push for increased Federal spending which is inflationary?

If substantial unemployment confronts us, is the decision again going to be Federal subsistence dollars and not productive jobs? With the financial resources now available to individuals and State and local governments is there a better time to make decisions which commit us to the road we have been told was our objective; namely, individual enterprise?

If present proposals for Federal spending mature, the people may as well know that tax reduction is a false hope. Unless these hopes have been piously mouthed anesthetics it is time now for Federal action clearly to show the firm decision to take the individual enterprise road. If not now, when again will a better opportunity for this decision come?

This decision calls for two steps now.

First. A refusal to plunge the Federal Government into new and more fields

of expenditure, and, as the Comptroller General said, "Courageously apply the pruning knife day after day to present Federal spending."

Second. Action should be had now on the first steps in tax reduction so that it is a clear disclosure of the official path that will be followed. These first steps should above all be a spur to profit ventures and a timed reduction of taxes on consumers so they may increasingly absorb the products and services of private enterprise.

The United States Delegation to the United Nations Reparations Commission at Moscow

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mrs. LUCE. Mr. Speaker, a few days ago several Democratic Members of this House called upon the Acting Secretary of State, Mr. Grew, to question him concerning this country's relations with the Soviet Union, which, they feared had deteriorated sorely since the days of Yalta. They reported Mr. Grew as saying "this country is leaning over backward to avoid giving offense to Russia." If one may judge by the complexion of mind of several Members chosen to represent the United States on the United Nations Reparations Commission, now assembling in Moscow, Mr. Grew's reported remark is a correct analysis of our Government's conciliatory attitude toward the Soviet Union.

The head of this delegation is Mr. Edwin W. Pauley, former national treasurer of the Democratic Party. Under Mr. Pauley is Dr. Robert Gordon Sproul, the distinguished president of the University of California, who will advise our delegation on the human aspects of reparations. Dr. Sproul has an excellent record of friendship for the Soviets and for Soviet groups in America. In 1943 Dr. Sproul extended the hospitality of the university he heads to a congress of the Hollywood writers' mobilization, and made the welcoming address. That was the 3-day meeting at which greetings were brought from Russia to the writers of the United States by Mr. Mikhail Kalatosof, the agent of the Soviet moving-picture monopoly, Sovkino. It was at that same meeting, also, that Mr. Robert C. Miller, an American newspaper correspondent just back from Guadalcanal, was forbidden by Dr. Sproul and the censors of the Hollywood writers' congress to deliver his remarks on the war in the Pacific. They felt that any statement about the war in the Pacific might tend to cause friction, since the Soviet Union was—as it still is—not at war with Japan.

The most important member of the delegation, perhaps, is the expert on international law, Mr. Richard B. Scandrett, Jr., of New York, legal adviser to Dr. Isador Lubin, also a United States representative on this delegation. Mr. Scandrett's record of avoiding friction with the Soviet Union goes back 16 years to the time when he was associated with the law firm of Simpson, Thatcher & Bartlett, American legal representatives of Amtorg, the Soviet trade agency, from 1919 to 1923.

According to the Daily Worker, which considers him a great good friend to Soviet Russia, Mr. Scandrett was a prominent signer of the statement in the Daily Worker, July 5, 1943, defending the film Mission to Moscow, a statement which bitterly attacked critics like Prof. John Dewey, who had charged the film with distorting history. Also, he was a signer of the Golden Book of American Friendship With the Soviet Union, published in the magazine Soviet Russia Today, issue of November 1937, page 79, along with Mr. VITO MARCANTONIO, and numerous other loyal Communist supporters. He was a sponsor of a dinner given by the editors of this magazine on the twenty-fifth anniversary of the Red army, February 22, 1943, at the Commodore, New York City, a sponsor of a dinner given by the American-Russia Institute and dedicated to American-Soviet postwar relations at the Commodore, New York City, October 19, 1944. He is a member of the Russian-American Chamber of Commerce, associate and collaborator of the late Alex Gomberg, who was the leading Wall Street promoter of Soviet enterprises in textile and other fields. Gomberg was a brother of a leading Bolshevik who called himself Gorin—his party name, as Stalin is of Djugashvili, and Lenin was of Ulianov. Gorin was very close to Litvinov and was called by Max Eastman "the regular agent between the heads of the Bolshevik Party and its supporting clique in Wall Street."

Just before Mr. Scandrett went to Moscow he is reported to have spoken very plainly on the subject of reparations to various acquaintances. In Mr. Scandrett's view the postwar world will be dominated exclusively by the United States and Russia. There will be no more Germany—only German provinces under Russian, American, British, and French "colonial" administrations.

In these four provinces living standards will be reduced to the level now existing in the Siberian concentration camp and exile areas. In the final analysis, these areas will be ruled by the United Nations Reparations Commission, which will decide just how many Germans will be needed in each province to maintain minimum agricultural production. All German males not required for this minimum production will be drafted into slave battalions, which will be transported under orders of the United States and Soviet Russia, with particular emphasis on their use in restoring the damage done to Russian areas by the war, since the Soviet Union, unlike France, Great Britain, or the United States of America, does not fear the internal competition of slave labor—an already well-established domestic policy there.

No regard is to be paid in the enslavement to the education, family connections, or dependent wives or children of the German deportees. No exemptions will be allowed to priests or pastors. In fact, Mr. Scandrett is quoted as saying a complete agreement has been reached between the United States and the U. S. S. R. on the matter of respect for religion in eastern Europe. Under this alleged agreement the Russian Orthodox Church, recently readopted by the Kremlin, will be given the status of the official religion in the Baltic Republics—Poland, eastern Germany, Czechoslovakia, Rumania, Bulgaria, Hungary, and Austria. Roman Catholics will be cut off from any pastoral connection with Rome.

As partial confirmation of the latter plan, Marshal Tito in Yugoslavia announced on June 5 that the Roman Catholic Church in Croatia should become independent of Rome and accept a status subordinate to that of the orthodox church.

If these are, indeed, Scandrett's sentiments, there can be little friction between the American and Russian reparations delegations on the subject of international legal questions. Mr. Scandrett's views are identical with those of the official Soviet line as it was promulgated in May 1945 in a booklet called the Treatment of Defeated Germany, written by Mr. V. J. Jerome, and published by the New Century Publishers of New York, the semiofficial printers for the Communist Political Association.

As to how many Americans may agree with Mr. Scandrett and Mr. Jerome, I do not know. But every American must agree that Mr. Grew's statement that we are "leaning over backward" not to give offense to the Soviet Union is certainly true insofar as it applies to the choice of key members of the Reparations Commission sent by us to our allies in Moscow.

Research for Health

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Research for Health," which was written by me and published in the New York Times of April 10, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESEARCH FOR HEALTH

(By Hon. CLAUDE PEPPER, Senator from Florida)

A few years ago, when the war was just reaching our shores, an urgent call was sent out for a dried blood plasma concentrate which could be stored in quantity in the crowded confines of modern fighting ships. Space aboard them could not be spared for the bulky equipment needed to handle liquid plasma or whole blood.

In answer to the appeal, a group of medical scientists at Harvard University, financed

by the United States Government, greatly expanded their research on blood. In a period of a few short months they had developed methods of producing huge quantities of a blood-albumin concentrate which has since saved thousands of lives on every one of our far-flung naval and military battle fronts.

But that was not all they found. During the experiments on blood, which were necessary for perfecting the concentrate, the Harvard research workers happened on a curious discovery, far removed from the realms of martial activity. They isolated a blood substance called gamma globulin which turned out to be not only an effective cure, but an actual preventive, for measles. Gamma globulin, after the war, may help eliminate measles from the list of ailments children have to go through before they can be considered grown up. And this is only one of many possible developments which may stem from the blood research project undertaken by the Harvard scientists.

Another, even more extraordinary weapon against disease which has come out of the war, is penicillin. It has already proven irreplaceable in reducing the incidence of fatalities from war wounds, with their dangerous concomitants of peritonitis, osteomyelitis, cellulitis, gas bacillus infection, and so on. Likewise, in the diseases of peace, penicillin is a nearly certain cure for most types of pneumonia, meningitis, septicemia, mastoiditis, sinusitis, and a majority of the human ills caused by the common bacteria. One of the most dramatic new uses for this amazing therapeutic agent is in the fight against syphilis. Only a few short months ago the United States Army announced that it had perfected a course of treatment with penicillin which was curing nearly 90 percent of all men with primary syphilis in seven and a half days, as compared with the weeks and even months necessary with older methods of treatment. Moreover, the penicillin therapy is more effective and much less dangerous or painful than any other treatment used heretofore.

These are only two among dozens of the outstanding discoveries of wartime medical research, DDT, the miracle insecticide, is another; still others are a new method of combating dysentery; a potent vaccine for the prevention of bubonic plague, invaluable new surgical techniques, and a whole category of discoveries in aviation medicine. Many more are still hidden behind the veil of military secrecy.

How did it happen that all these medical miracles were discovered simultaneously? Had we suddenly come upon a rich vein of medical research talent which we had never before tapped?

No, the talent was there. The urge to go forward was there, deep in the heart of every scientist who knew what the possibilities of medical research were. The only thing that was lacking was the money to finance such research.

Indeed, many of the discoveries which seem so new to us have been known for many years, but only as laboratory curiosities. Penicillin, for instance, was first found to have remarkable antibacteriological effects as far back as 1929, when the British scientist Fleming first reported its deadly effects on disease germs. But adequate financing for its development was lacking. It remained merely the subject of test-tube experiments until the demands of military medicine brought money for its production out of hiding.

Or take the components of blood, of which albumin and globulin are only two of several. They had been known for some time. But it took the war, and the provision of Government funds for wartime medical research, to bring about the perfection of methods of producing blood components in quantities large enough to be useful in medical practice.

DDT was actually on the market before the war as a commercial insecticide. It has been packaged and sold by an established pharmaceutical house for several years. The only trouble was that this firm was a long way off—in Switzerland. It was not until the Army issued an emergency request for an improved insecticide to be used in the pest-ridden jungles of the Pacific islands that scientists here in America were given the necessary funds to enable them to test and prove its efficacy, and to improve it by adding the chemicals which today give the substance its astounding penetrative powers.

All these facts add up to one very simple and very shocking statement: It took a world war of catastrophic dimensions to jar enough money out of the national pocket to enable medical research men to conduct their work on an adequate scale.

The relative insufficiency of funds before the war was not due to a lack of medical problems needing study. On the contrary, that there was a pressing need for many types of medical research is evidenced by a few hard facts on the state of the Nation's health.

During the year 1940 nearly 165,000 people died of cancer in the United States; over 536,000 died of diseases of the heart and arteries; and about 107,000 died of diseases of the kidneys. Among them, these three major types of diseases accounted for nearly 57 percent of the actual deaths occurring in 1940.

Yet the sum of only $493,815—or less than 62 cents per death—was granted in 1940 for research into the causes and treatment of these diseases by American philanthropic foundations, the main prewar source of medical research funds.

In 1943 nearly 614,000 people were in nervous and mental hospitals, total charges on Federal, State, and local governments, or on their families. Yet the National Committee for Mental Hygiene, the foremost organization doing research on psychiatric problems, could spend only $38,930—or less than 6¼ cents per hospitalized patient—on research in 1943.

In that same year an estimated 1,917,000 man-years—well over half a billion man-days—of productive working time, and upward of $2,000,000,000 worth of purchasing power, were lost by American workers because of absences from work of 8 days or over due to illness. Yet foundation grants for research on respiratory diseases, such as influenza, pneumonia, tuberculosis, and the common cold, which usually cause between a third and a half of all absences from work due to illness, totaled in 1940 just $163,795.

One final figure. As of October 1944, approximately 5,500,000 men, over 34 percent of the 16,000,000 men aged 18 to 37 examined by Selective Service for the armed forces, had proven so defective or diseased that they either had to be put into IV–F or were given medical disability discharges from the services after having first been accepted for duty. No war wounded are included in either group.

Yet the total funds granted by American foundations for research into all the problems of medicine and health in 1940, the last year for which figures are available, totalled only $4,958,511. More than three times that amount was spent by one corporation alone in 1943 for industrial research on its commercial products. The estimated total expenditures for profit-making industrial research by American corporations reached the astronomical figure of $275,000,000 in 1941—over 55 times the amount granted for nonprofit medical research by American foundations the year previous.

As I have said, philanthropic foundations are the major sources of funds for medical research in this country. The principle national voluntary health agencies spent approximately $810,000 on medical research in 1943, much of which may have come from the foundations. Expenditures by the Federal Government for medical studies in peacetime were very small, and were limited largely to the fields of public health, sanitation, and epidemiology. The amounts for research allocated out of medical school funds cannot be accurately established, since the schools do not keep their books in such a way as to show research expenditures. However, they are known not to have been very large, and are believed to have been decreasing rather than increasing of recent years as a result of shrinkage in medical school incomes from endowments.

In other words, medical research in peacetime has always been seriously under-supported. And yet it is phenomenal how little money actually has been spent by the Government for emergency medical research during the war. The Office of Scientific Research and Development, which was established by President Roosevelt in June 1941, to coordinate and finance all the scientific problems arising from the onset of the war, appropriated only $15,349,826 for medical research during the period ending in December 1944. During the same period the Army, the Navy, and the United States Public Health Service together spent another $15,000,000 for special wartime work on medical problems.

In all, therefore, a total of not much more than $30,300,000 had been expended by the Federal Government for medical research up to the end of 1944. This is approximately 10 percent of the cost of the war to the American people for one day.

But it is only when you start to count up the gains which the Nation has received from the program that its inexpensiveness becomes obvious. To be crassly pecuniary about it, if penicillin alone had saved only 3,030 soldiers' lives—and any Army doctor will tell you that is nothing in comparison with what it really has done—it would have earned for the people the total cost of the whole wartime medical research program in uncollected $10,000 military life-insurance policies alone.

However you look at it, there can be no question that the accomplishments of American medical research have been phenomenal, and phenomenally inexpensive, during the war. I do not think that we can afford to permit this work to slack off when peace comes. I do not think that we can complacently ignore the fact that disease, disability, and premature death are costing the Nation, according to estimates by the Social Security Board, as much as $10,000,000,000 a year in shortened lives, in medical care, in unemployment, and in lost national income and national product.

I believe that we must not only work to cure everyone who is sick, but to discover the medical causes of sickness, if we are to succeed in eliminating this enormous waste of our human and material resources.

The Senate Subcommittee on Wartime Health and Education, of which I have the honor of being the chairman, is formulating a program for bringing the best existing medical care to everyone living in this country, regardless of his economic status or his geographical location or his race. In this the subcommittee is tackling one of the most important jobs to be done in America today. Yet I feel that we cannot limit ourselves to bringing the benefits of preventive and curative medicine as they exist today to each and every citizen, although we must do that. We must also, and of this there can be no reasonable question, bring the resources of the Federal Government to the aid of those who have the talent and the urgent desire to eliminate the causes of disease, disability, and premature death—the unsung heroes of medical research.

But Federal aid to medical research is necessary not only because of the results to be expected in better health and less disease, although that is of course the major importance of such a program. In addition, anything which will increase the amount of medical research work, add to the number of skilled workers in the field, and give them

and the existing workers better security and higher salaries, as such a Federal program must do, will be of inestimable value in a yet larger program which the President of the United States has set the Nation as an immediate goal: the goal of full employment in the postwar years.

On the 24th of November 1944, President Roosevelt wrote a letter to Dr. Vannevar Bush, Director of the Office of Scientific Research and Development. In it the President stated, "The research experience developed by the Office of Scientific Research and Development should be used in the days of peace ahead for the improvement of the national health, the creation of new enterprises bringing new jobs, and betterment of the national standard of living."

Without question the American people are looking forward along these lines. They are expecting, and they will demand a postwar program for full employment which will result in prosperity such as has never before been experienced in this country. They are ready for it, and they also are ready for any change or improvement in the methods of government, of conducting business, and of maintaining national and individual welfare which may be required to bring such a program to fruition.

However, we cannot have full employment as long as we are losing hundreds of millions of man-hours of productive employment a year because of avoidable illnesses and avoidable premature deaths. Nor can we expect full employment as long as we let our human resources in terms of expert medical research scientists and eager, intelligent young research trainees go to waste because of lack of funds. We must, therefore, not only make the benefits of today's medical science available to every one, but we must also employ our medical scientists in the task of improving that science at every point and by every method. A program of medical care for all is only half a program if we do not at the same time devote every effort at our command to making that medical care unnecessary.

There is already a precedent for postwar Federal aid to research. Earlier this month Senator BYRD, of Virginia, offered a bill in the Senate to establish a Research Board for National Security. The bill provides for the expenditure of Federal funds for constant research on new methods of national defense. Only thus can we be certain that our Nation will at all times be strongly protected. But if we can appropriate Federal money for the development of new methods of warfare we can certainly spend whatever we need on the development of new methods of attaining good health for all.

One thing is certain. Penicillin, blood plasma, DDT, and all the other wartime medical discoveries have shown the way. We know now that adequate medical research adequately financed is an integral part of any national health program and of any national program for full employment. I believe that we shall proceed to act upon that knowledge, and that we shall provide the means whereby medical research can pull its full weight in the race for a healthy, busy, and prosperous Nation.

Visits Abroad by Members of Congress

REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. WILSON. Mr. Speaker, I take the floor at this time in order to correct a misinterpretation of several of my remarks which recently appeared in some of our local newspapers. First, I would like to say that I am not a man who has grown used to astronomical figures. A dollar, a single dollar, is a lot of money to me, it always has been, and I expect that it always will be. However, I hope that I am wise enough to realize that the intelligent expenditure of a dollar can save its producers 10 times, a hundred times, or even a thousand times as much as the original investment. I think any businessman would agree that such an investment would be good business.

I was recently privileged to make a trip to England, and I did not spend $1 of the taxpayers' money. I made the trip at a time when Congress was in recess, and while in Great Britain I used every minute of my time talking with our American GI's about conditions back home and explaining the GI bill of rights.

At the end of one of these speeches I was requested by high military authorities to visit certain air bases in Europe, and give the same information to other servicemen. I consented because I felt it was my patriotic duty to do so. I made as many as two and three speeches per day. I spoke before audiences of thousands of soldiers, often traveling at night, and many times missing my meals, but I was more than happy to do so. My reward was in the fact that not once, but hundreds of times, I was asked this question, "Why does not my Congressman come out here and tell me some of these things?" Many veterans of the last war said to me, "Certainly no Member of Congress came to see us in the last war, to tell us what was being done back home to help us in our readjustment." Needless to say, this was the highest recommendation for my action that I could have asked. However, every experience I had in Europe convinced me more certainly that we must never let another world war happen.

Yes, Mr. Speaker, I did suggest that it would be a good thing if every Member of Congress could see Buchenwald, and others of the horror camps. I am convinced that such sights seen and reported back to the people would be sound insurance against another world war. I did not say, however, that the cost would be small. In my opinion, compared to the value we would certainly reap, the investment would be a valuable one, and the expense of sending 300 or 400 representatives of the people to Germany would be the best possible investment in permanent peace. It is more or less of an obligation on the part of men who have spent, by their votes, thousands and millions and billions of dollars to wage a war to go, in the interests of peace, and see what that money has bought. The war has cost every American taxpayer thousands of dollars, and the expense of sending the taxpayers' elected agents to the battlefields would cost less than one-fourth of 1 cent per person. Does that seem to you an exorbitant investment, when not only money but lives are at stake? I cannot believe that any person who has sent a relative or a friend into battle would object to a one-fourth of 1 cent risk on the chance that it would keep such heartbreak from America's page in history in the future.

I have not risen to defend myself, Mr. Speaker, this is but a statement of my reasoning, and I hope it clarifies the suggestion which I made regarding future trips for Members of Congress.

Pauper Oath for Veterans

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph Leib, vice commander, Costello, Post, American Legion, Washington, D. C.:

At this writing five Members of the House and one Member of the Senate have introduced individual bills aimed to eliminate the obnoxious and un-American pauper oath demanded of every veteran seeking hospitalization for non-service-connected ailments or disabilities. Of interest, also, is the fact that every wounded soldier is required to sign this oath if they seek medical aid for illness not traceable to cause of discharge from the armed forces.

Under existing law the Veterans' Administration insists and secures the execution of a pauper oath from ex-soldiers who may be in need of medical services, and who cannot establish a service-connected status for the particular ailment.

Little has been written about this pauper oath, therefore, the average veteran has been kept ignorant of the significance or the reasons for this oath.

Veterans' Administration officials are quick to disclaim the implications or the seriousness of this legal requirement, and their stock rebuttal is that the oath is merely routine and meaningless.

Yet when attempts are made to eliminate this routine and unimportant oath the Veteran's Administration sets in motion every means at their command to befuddle the issue and to attempt to stifle criticism.

If the oath is unimportant as the Veterans' Administration contends, then why in the name of logic is it being retained on hospitalization forms, and why are Veterans' Administration authorities so determined to prevent the elimination of the oath?

I repeat as I have said over and over that one of the basic reasons for this oath is to discourage veterans from applying for Government hospitalization, and to encourage the former soldier to give his business to private hospitals or to civilian doctors. If this is not a logical conclusion, then what is the reason behind the insistance of this oath?

When a veteran reaches a point where he must go to a hospital, I contend that there should be no conditional admission. To force a veteran to swear under oath that he is a pauper and to have this oath flanked by penal threats is degrading and un-American. As it stands now, a man to be admitted to a bed must declare himself either a pauper or make of himself a deliberate liar. I want it clearly understood that no decent veteran should seek veteran hospitalization if he has the funds to pay for any necessary services in a private hospital.

Here are the bills that have been introduced to date to eliminate the pauper's oath:

[79th Cong., 1st sess.—H. R. 599—formerly H. R. 5454—In the House of Representatives, January 3, 1945, Mr. SPRINGER introduced the following bill; which was referred to the Committee on World War Veterans' Legislation]

A bill to amend section 6 of the act of March 20, 1933, to prohibit the requirement of the taking of the so-called pauper's oath by certain applicants for hospital treatment or domiciliary care

Be it enacted, etc., That the last sentence of section 6 of the act entitled "An act to maintain the credit of the United States Government," approved March 20, 1933, as amended (U. S. C., 1940 ed., title 38, sec. 706), is amended to read as follows: "No applicant for the benefits of this section shall be required to state on any form prescribed by the Administrator of Veterans' Affair (1) the value of the real and personal property owned by such applicant, or (2) whether or not such applicant is financially able to pay the necessary expenses of hospital treatment or domiciliary care."

[79th Cong., 1st sess.—S. 235—In the Senate of the United States, January 10, 1945, Mr. LANGER introduced the following bill; which was read twice and referred to the Committee on Finance]

A bill to amend section 6 of the act of March 20, 1933, to prohibit the requirement of the taking of the so-called pauper's oath by certain applicants for hospital treatment or domiciliary care

Be it enacted, etc., That the last sentence of section 6 of the act entitled "An act to maintain the credit of the United States Government," approved March 20, 1933, as amended (U. S. C., 1940 ed., title 38, sec. 706), is amended to read as follows: "No applicant for the benefits of this section shall be required to state on any form prescribed by the Administrator of Veterans' Affairs (1) the value of the real and personal property owned by such applicant, or (2) whether or not such applicant is financially able to pay the necessary expenses of hospital treatment or domiciliary care."

[79th Cong., 1st sess.—H. R. 1923—In the House of Representatives, February 1, 1945, Mr. MORRISON introduced the following bill; which was referred to the Committee on World War Veterans' Legislation]

A bill to amend section 6 of the act of March 20, 1933, so as to eliminate financial inability to defray expenses of hospital treatment or domiciliary care as a prerequisite to obtaining such treatment or care in a Veterans' Administration facility, and for other purposes

Be it enacted, etc., That section 6 of the act entitled "An act to maintain the credit of the United States Government," approved March 20, 1933, as amended (U. S. C., 1940 ed., title 38, sec. 706), is amended to read as follows:

"SEC. 6. In addition to the pensions provided in this title the Administrator of Veterans' Affairs is hereby authorized under such limitations as he may prescribe, and within the limits of existing Veterans' Administration facilities, to furnish to men discharged from the Army, Navy, Marine Corps, or Coast Guard for disabilities incurred in line of duty or to those in receipt of pension for service-connected disability, and to veterans of any war, including the Boxer Rebellion and the Philippine Insurrection, domiciliary care where they are suffering with permanent disabilities, tuberculosis, or neuropsychiatric ailments and medical and hospital treatment for disease or injuries: *Provided*, That any veteran of any war who was not dishonorably discharged, suffering from disability, disease, or defect, who is in need of hospitalization or domiciliary care, shall be furnished necessary hospitalization or domiciliary care (including transportation) in any Veterans' Administration facility, within the limitations existing in such facilities, irrespective of whether the disability, disease, or defect was due to service."

SEC. 2. The Administrator of Veterans' Affairs shall not require any applicant for hospital treatment or domiciliary care to make any statement, written or oral, with respect to the value of the real or personal property owned by such applicant.

[79th Cong., 1st sess.—H. R. 2413—In the House of Representatives, February 28, 1945, Mr. WICKERSHAM introduced the following bill; which was referred to the Committee on World War Veterans' Legislation]

A bill to prohibit the Administrator of Veterans' Affairs from requiring "pauper oaths" of veterans applying for hospital treatment or domiciliary care, and to eliminate inability to defray expenses of hospital treatment or domiciliary care as a prerequisite of obtaining such treatment or care in a Veterans' Administration facility

Be it enacted, etc., That the Administrator of Veterans' Affairs shall not require any applicant for hospital treatment or domiciliary care to make any statement, written or oral, with respect to (1) the value of the real or personal property owned by such applicant, or (2) the financial ability of such applicant to pay the necessary expenses of hospital treatment or domiciliary care.

SEC. 2. Section 6 of the act entitled "An act to maintain the credit of the United States Government", approved March 20, 1933, as amended (U. S. C., 1940 ed., title 38, sec. 706), is amended—

(a) By striking out "and is unable to defray the necessary expenses therefor (including transportation to and from the Veterans' Administration facility),"; and

(b) By striking out the last sentence thereof which reads as follows: "The statement under oath of the applicant on such form as may be prescribed by the Administrator of Veterans' Affairs shall be accepted as sufficient evidence of inability to defray necessary expenses."

[79th Cong., 1st sess.—H. R. 2587—In the House of Representatives, March 12, 1945, Mr. MARTIN of Massachusetts introduced the following bill; which was referred to the Committee on World War Veterans' Legislation]

A bill to dispense with the requirement of an oath in connection with applications for benefits under certain laws granting benefits to veterans and their dependents

Be it enacted, etc., That any application for benefits under the Servicemen's Readjustment Act of 1944, the Servicemen's Dependents Allowance Act of 1942, or any law or regulation administered by the Administrator of Veterans' Affairs, which contains or is verified by a written declaration that it is made under the penalties of perjury shall for all purposes be deemed to have been made under oath or affirmation.

[79th Cong., 1st sess.—H. R. 2717—In the House of Representatives, March 21, 1945, Mr. SASSCER introduced the following bill; which was referred to the Committee on World War Veterans' Legislation]

A bill to eliminate the requirement of an oath in connection with applications for benefits under all laws and regulations administered by the Administrator of Veterans' Affairs

Be it enacted, etc., That any application for benefits under the Servicemen's Readjustment Act of 1944 or any other law or regulation administered by the Administrator of Veterans' Affairs, which contains or is verified by a written declaration that it is made under the penalties of perjury shall for all purposes be deemed to have been made under oath or affirmation.

Other Members of Congress have expressed support in the hope of removing the pauper oath from the statute books of the Nation. Some of the legislators are Members of the House World War Veterans' Committee. I am pleased to call attention to the following correspondence:

NOVEMBER 23, 1944.

I appreciate very much your letter of the 22d. I favor H. R. 5454—now H. R. 599. In fact, I have just recently filed a rather strong protest with the Veterans' Administration as to this particular matter and I had the matter up with them. I shall be glad to support H. R. 5454 and even sponsor similar legislation.

Thanking you for writing me and with all good wishes, I am,

Sincerely yours,

J. HARDIN PETERSON,
Member of Congress from Florida.

NOVEMBER 24, 1944.

Acknowledging your letter of November 22, 1944: I concur with your position in regard to eliminating the requirement that veterans take the paupers oath, and you can count on me among your supporters in that matter.

Very sincerely yours,

CLAIR ENGLE,
Member of Congress from California.

NOVEMBER 24, 1944.

Answering your letter received today, please be advised that I am in favor of the passage of H. R. 5454.

Sincerely yours,

B. W. KEARNEY,
Member of Congress from New York.

NOVEMBER 24, 1944.

Replying to yours of November 22 regarding H. R. 5454, this is to say that I will not only support the measure on the floor but in the Committee on World War Veterans' Legislation, of which I am a member.

Sincerely yours,

THOMAS G. ABERNETHY,
Member of Congress from Mississippi.
(Now resigned from committee.)

NOVEMBER 24, 1944.

Your letter relative to H. R. 5454, was received this morning. You can rest assured that it is my intention to vote for the bill introduced by Judge SPRINGER. With kind regards.

JOHN L. MCMILLAN,
Member of Congress from South Carolina.

DECEMBER 5, 1944.

I have read your letter of November 22, and the attachment thereto, and I am pleased to inform you that I am in favor of the legislation proposed in H. R. 5454.

Very truly yours,

WILLIAM A. ROWAN,
Member of Congress from Illinois.

Assistance has also come from the following Members of Congress: NOBLE J. JOHNSON, of Indiana; GEORGE H. GILLIE, of Indiana, EARL WILSON, of Indiana; CLYDE DOYLE, of California.

The Lost Generation of Scientists

REMARKS
OF
HON. CHARLES L. GIFFORD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. GIFFORD. Mr. Speaker, we have already lost one generation of future scientists because we have denuded our colleges and universities of qualified students for scientific courses. Congress should immediately enact the McDonough bill. I recently made a lengthy argument on it.

In this connection I hope you will notice the number of foreign students who are already in this country. A whole generation of scientists has been lost. I think it should command our attention.

[From the Journal of Chemical Education for June 1945]

EDITOR'S OUTLOOK

Good old, big-hearted Uncle Sam! Never a thought for himself and always ready to help the other fellow out of his troubles. Even feeding the rest of the world while he tightens his own belt—which, after all, is but a good, Christian act and not to be criticized.

But now comes the pay-off. Have a look at the registration figures in our graduate schools, to see especially the proportion of foreign students. It was brought to our attention recently that one of the country's largest technical schools has a present registration of about 150 graduate students, of whom over 100 are foreigners. It has also been pointed out that an increasing proportion of Asiatic students are coming to our shores.

We have always advocated international good will; we don't believe in any protective tariff on education; we have always befriended and encouraged every foreign student we have met, and expect to continue to do so, but doesn't there seem to be something wrong with the picture when we turn our young men out of their technical-training courses and send them to the Pacific to make Asia safe for the Asiatics, while their young men in the same age group come here to take the empty places? Maybe it is a good thing that there is someone to keep our graduate schools going, but there is no denying that these young foreigners are being given an advantage from which our own boys are excluded and that they will go back to their own countries equipped to compete on more than favorable terms in the technical professions. We are not suggesting for a moment that we turn the foreign students out, but rather that we should never have turned our own students out.

And if the FIFO discharge policy—first in first out—should by any change prevail, another error will be committed, if we assume, of course, that the important thing is not individual convenience but the greatest long-range good to the country. It is of the utmost importance to put our technical professions back on a normal basis as soon as possible, but the men trained in these fields (and in training for them) were among the last to be drafted into the armed services. Selective Service at least started to do a job of selection.

Now, we should have some selective process of getting men out of the services, in relation to their importance in civilian life. It is understandable that the Army does not want to do the job of selection, but it is said to be receptive to the idea of a selective discharge process if some other agency will establish the basis for selection.

Distribution of foreign students by countries (with exception of Latin-American students)

Soviet-American Unity in Victory and Peace

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD the address which I made in Madison Square Garden in New York City on Thursday, May 31, 1945, as a part of a program entitled "Salute to the GI's."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are privileged spectators this evening of a part of the greatest drama of all time. We see here men who are the unshakeable symbols of Soviet-American unity in victory and in peace.

When the hands of states clasp hands, that is great. When workers of two nations clasp hands, that is greater. When the soldiers of the Soviet Union and the United States joined hand across the Elbe, that was one of the greatest events in human history.

Those young men met in the heart of a continent. They began their fighting march far beyond that continent. They had come across the snows and the steppes. They

had traversed the broad rivers, the wide and infested ocean, over the beaches and over the hedgeways and hills. They had surmounted every obstacle of both nature and of the evil enemy and finally with their feet upon the neck of tyranny they stood triumphant.

They are here tonight to prove that in Soviet-American unity, freedom lives and tyranny is dead. I say tyranny is dead. I mean Mussolini is dead—hanged by the heels and the stench of fascism is being cleaned out of Italy. Nazism is not dead because many Nazis still live but Himmler is dead—Goebbels is dead—Hitler is dead or will be, and soon Goering and Hess and all the rest of their hellish gang will hang in part penance for their crimes, and if we do not sicken of the task of justice too soon, there will be rooted out of German soil the fungus of nazism and Nazis.

If you wish to know whether the United States of America and the United Republics of Russia respect and trust each other, ask these men. If you wish to know whether the fighting men and women of America and the Soviet Union were friends and will be friends, ask these men. If you wish to know whether there is any sense in the loose talk that we and the Soviet Union are bound to fall out and go to war, ask these men and ask the millions of Americans and Russians with whom these men have fought the common enemy.

It is hard for one's mind to reach back from these days of victory to June 1941, when Hitler exulted over his mastery of western Europe, closed in for the kill upon the Soviet people. Memory cannot recreate the sad scenes of those awful days and weeks and months in which the bestial eyes of Hitler feasted through glasses upon the towers of the Kremlin. What was done by the Red Army and the Russian people along every foot and yard and mile of that long road back—what they did in every village and town and city, along every highway and in each forest, has no counterpart in history.

Finally, at Moscow and Stalingrad the flowing tide of evil stopped against the wall of blood and spirit of both Army and people under one of the greatest names in history—Joseph Stalin—and began to ebb. It did not flow back to Berlin however, it was driven back by shell and steel and strength. Finally the Red Army having torn and cut to pieces and smitten down the cowed and conquered "superior race", enveloped Berlin and then met American GI's at the Elbe. When these men clasped hands they welded the two mightiest links in human history.

History is rich with mighty exploits of war, the deeds of the brave and the unconquerable. History's pages are replete with the heroes and the heroines of war. But, pen has not written and words have not described the exploits of the heroes and the heroines, more majestic than those of the Red army.

Something, too, can be proudly said for the GI's who stood on the west bank of the Elbe. The Elbe was a long way from home for them. From the Elbe to the cottonfields of Alabama, the mines of Montana, the plains of the Dakotas, and the rugged hills of New England is a long way, too. Yes; it was a long way from the GI's, the peer of any soldiers in the world, who shook hands with their gallant friends of the Red army, to the American boys who grew up amid the peace and plenty of America. They weren't born or reared to be soldiers. They had no lust to kill or to conquer. They would have sworn when they played Indian or cops and robbers or cowboys that they would never fight wars; yet they outsmarted, outshot, and outfought the best the Nazis had, though they had been spawned for war.

It is a military record that not one turned back until the task was done—the world was free again of the threat of conquest and tyranny.

Now, at long last, there is peace in Europe—enforced peace. Peace for which so many have died, given their limbs, and their faces, and their minds. Peace for which so many have given their homes and their hopes. I wish I could say there was peace everywhere on earth and that the price for world peace had been fully paid.

The Jap, accursed as he is, must yet be finished off and the earth freed of his poison. To that task we are equally, as we were to the defeat of nazism and fascism, dedicated and devoted. But the peace in the Orient will come as it has come in Europe—enforced peace.

I know the western world is saddened by the spectacle we see in Syria. As one who honors and loves France, I must say that it ill becomes France, so recently liberated, so soon to attempt to enslave another people.

Now the question the GI's are asking is what will come of this peace? What sort of a world have they won? Who are these people talking about war with Russia? What do they want? Are they some of these people who preferred Hitler to Russia, who have come out of their hiding and found their voice? Are they really the enemies of communism or of democracy? To hear them you would think that they are defending the institution of private property and our inalienable civil rights. Yet the truth is they hated Roosevelt as much as they hate Stalin, and never was private enterprise so flourishing and civil rights so secure as under that other GI of democracy who has gone on with the GI army of the dead, Franklin D. Roosevelt.

Who disseminates this constant stream of poisonous propaganda against Russia, which makes every effort at self-security and preservation on the part of the Russians an act of aggression upon the world and world peace? It is easy to see that it is Russian policy to have friendly states around her borders. Who does not have that policy? Yet have you heard Russia questioning Britain's concern for friendly states across the Channel or what Britain has done in infested Portugal and Spain or Italy or any other area adjacent to her life line or territory? Have you heard Russia say anything about our relations with Mexico or Central and South America or Canada or even about our having bases in the Pacific?

No one will deny, however, that the Soviet Union has taken a great and good part in building the edifice of the United Nations. In fact, you will remember that it was Russia which suggested that full employment for all nations should be one of the objectives of the United Nations. Twice in 9 months has Russia come to American shores and labored unstintingly with us all to build world well-being and world peace upon the graves of the honored dead in this war against tyranny.

Of course Russia will keep her powder dry after the war and keep a lot of it, no doubt. Our GI's who still live and we all are grateful Russia has not just started that policy. We, too, are going to keep our powder dry and keep plenty of it.

God forbid that we should participate ever in another war or that another war should come to curse the earth. We must, if we are to retain, however, the spirit of the Declaration of Independence and the fervor of our old freedom declare to the world that whoever enslaves another is our uncompromised enemy and in one way or another we shall break his shackles. If we do not, the war shall not have been fully won and the dead shall have died in vain.

As we stand before the crosses of the dead, as we stand with awed silence before the all-seeing eyes of those fine and fresh young spirits who have died for a decent world, now is the time for us to consecrate ourselves again to a full measure of freedom for the race of man—the "four freedoms" of Franklin D. Roosevelt—freedom of religion, freedom of speech and expression, freedom from fear, freedom from want everywhere in the world.

There were never sadder days than these. There were never so many sacrificed in war, never so much devastated earth, never such wreckage and ruin, never so many broken bodies and wretched spirits as lie in the wake of this terrible war.

Yet when one lifts one's eyes to the horizon and sees the illimitable future which stretches ahead of us, there was never such reason for hope—such hope for peace, such hope for plenty, such hope for happiness for so many as there is today. The call and the cry in peace, as it was in war, is forward, conquer, live. Go out, therefore, you who in your hearts honor these GI's, living and dead, and preach this doctrine of democracy. And add to your faith, works. Man is not only walking upright like a man again, he is running into his new world.

Plan To End World Trade Curbs

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an able and timely address delivered by Gov. Thomas E. Dewey last night in New York, in which he offered a plan to end world trade curbs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to be here tonight and to extend to all of you, on behalf of the State of New York, warm appreciation and encouragement for the great work you are doing. As far as I know they have not given out any medals in this war to those who have worked so hard on the seven successive war-loan drives. But I do not think any of you need medals to sustain your enthusiasm and energy. None of you has any hope or desire for reward. You are engaged in floating this Seventh War Loan because you know how tremendously important that job is.

New York State has been called upon to play a major part in this as in previous war-loan drives. Nearly $4,000,000,000, more than one-fourth of the total national goal, has been assigned to the quota of our State. That is a staggering sum. Yet I know you will achieve it.

The importance of the work you are doing does not lie alone in the amount of money that is raised. Even more important is the way that money is raised. In fighting total war, money is less important than machines and it can be manufactured more easily. It can be manufactured by a mere stroke of the pen. But to finance the war that way would be unadulterated inflation. It might serve to

finance the war for a time, but it would gravely jeopardize the peace.

AID TO POSTWAR STABILITY

The national goal is to raise one-half this great war loan out of the savings of individuals. Thus you are working not only to win the war but to lay the foundation for economic stability after the war. Only with economic stability can we realize the promise of a lasting peace.

So it is appropriate, I think, to talk with you briefly about what must be done if we are to achieve economic stability and lasting peace in the world.

It will not be enough to crush Japan militarily, as Germany has been crushed. Enduring peace cannot be won on the battlefield alone. Nor will it be won alone by the establishment of the world organization which is now being hammered out in San Francisco.

Real peace will only be achieved if the nations of the world can live and work together in mutual respect and confidence.

In the last World War we were also victorious in the field. But the end of armed conflict did not bring peace. War continued in a different form—the battle royal of economic warfare. It was every nation for itself and devil take the hindmost. In that economic war, stupidity played a greater role than malice. The blind blows struck were aimed unwittingly at friend and foe alike.

Prohibitive tariff barriers, failure to settle the problems of war debts and reparations, a struggle for self-sufficiency led on to currency break-downs, competitive devaluations, quotas, exchange restrictions, clearing agreements, and a progressive descent into authoritarian controls over every aspect of international commerce. Here was a grim game which weakened and divided the nations which carried high the banner of freedom, while the totalitarian aggressors grew bold and strong.

PLAYING WITH DYNAMITE

We all know it is playing with dynamite to repeat those errors of the past. Yet that dynamite already exists. We must recognize that we will emerge from the present war with many wartime restraints on international trade in effect and with many countries impelled by dire necessity toward the establishment of a whole new system of restrictions and controls. In other words, we will end this war with many nations using the implements of exchange restrictions, export and import controls, and other authoritarian devices which appeared at the very end of the last period of peace. The vital question is, Where do we go from here?

Most of the countries of Europe have been impoverished. The wholesale destruction of their industrial plants leaves them in desperate need of imports at a time when they have little to export in exchange. Inevitably such a condition is likely to encourage measures of self-protection to limit and control foreign trade.

The position of Great Britain is particularly significant. She will emerge from the war weakened by the loss of a large part of her foreign investments and owing an enormous short-term debt abroad. Much of her industry will need rebuilding; her foreign trade has been disrupted and her shipping partly destroyed. At the same time she is in need of large imports of food and raw materials. The problem of Britain is serious. It is serious for us as well as for the British, because restoration of a strong and prosperous Britain is essential to world recovery.

Before the war traditionally free-trade Britain had been forced to turn to protection and to a system of empire preference. Now billions in blocked sterling are owed to India, Egypt, and the Dominions. The urge toward Empire preference is stronger than ever, and an influential section of British opinion has urged the creation of a tightly knit sterling bloc within which trade would be encouraged to the exclusion of nonsterling nations.

ECONOMIC WARFARE THREAT

Almost everywhere we look—to the British Empire, the Low Countries, the Scandinavian Nations, France, and other nations—the dangers of renewed economic warfare in the years ahead are great.

We in the United States will emerge from the war with overwhelming power—financial and industrial. We shall have a gigantic burdensome internal debt. But, nevertheless, we shall have great power. Inevtiably the rest of the world wonders how we will use that power. We, beyond all other nations, have the capacity to produce quickly the machinery and goods which virtually every nation will desperately need. There is no question of the huge demand for our exports that will exist. The great question is whether we are prepared to accept payment for these goods in the only sound way that payment can be made—by taking in exchange the goods and services of other nations.

If that question is left in doubt, then, inevitably, we shall see our present allies seeking to protect themselves by import quotas, currency blocs, blocked currencies, and all the freedom-menacing machinery of economic war.

I am not one of those who believe that we have in this country a "mature economy" in the sense of an economy that has lost the capacity to grow and expand under a system of private enterprise. But I do think we have become a mature country, capable of playing a wise and mature role in the community of nations.

I take it we are agreed that we do not intend to see the world fall back into the conflicts and antogonisms of ultranationalism. Certainly, speaking for the Republican Party last year, and consistent with its platform, I made it very clear that I stood for no such proposition. Equally clearly, the Democratic Party stands for no such proposition. The American people have made clear their determination to join with other nations in a world organization to maintain peace. But real peace cannot be achieved merely in the political field. The causes of international strife go deeper than mere unprovoked military aggression. All of the work being done at San Francisco will mean tragically little if economic conflict is to divide the nations.

UNITED STATES CANNOT LIVE ALONE

Our primary objective is to secure peace and prosperity for the United States. But we know that we cannot live alone in the world. Certainly we cannot obtain the healthy, vigorous economy we seek if the rest of the world is sick. We seek an economy of abundance with full opportunity for employment and a rising standard of living. A board, flourishing trade among nations is essential to the establishment of peace and prosperity in the world. This in turn is essential to our own goal of high level employment and a rising standard of living under a system of competitive free enterprise.

In the achievement of these ends the United States must take the lead. Our preponderant economic power makes us the nation which can make the most effective contribution to economic peace and can best afford to take the lead.

How shall we do it? Certainly no single step or action will do it. Many, if not most, of the controlling factors are in the hands of other nations. The United States has never, in peacetimes, taken to government-controlled cartels, exchange controls and restrictions, the widespread use of quotas, or dumping. These are the handicaps to trade which other countries must lead in removing.

But there is much we can do. High tariffs are one barrier we ourselves can lead in reducing, as we have done in recent years and as we shall continue to do under the renewed Reciprocal Trade Agreements Act when the Congress completes action upon it. Beyond that, our country should initiate a world conference for general tariff reductions. Such a conference ought to develop a program for the speedy removal of wartime trade controls and other barriers to the exchange of goods and services among nations. None of these measures can work only one way. This must be a two-way street and serve the primary interest of our own people, or it will not work and will not continue to be supported at home. There are other serious barriers to world-wide economic recovery, including problems of exchange and of uneconomic debt, some of which still remain as a legacy of the First World War.

The 25-year-old foreign government debts to the United States arising from World War I will never be paid because they cannot be paid. We should be honest and intelligent enough to say so officially and cancel them. Along with this should go an immediate repeal of the Johnson Act which forbids private loans to governments and nations now in default on these debts remaining from World War I.

LEND-LEASE SETTLEMENT

Efforts should begin at once toward settlement of the lend-lease obligations arising out of this war. Every action to this end should, in accordance with article VII of the mutual aid agreements, be directed to the expansion of production, employment, and the exchange and consumption of goods; to the elimination of all forms of discriminatory treatment in international commerce and to the elimination of other trade barriers.

It is an essential part of the lend-lease agreement that the terms and conditions of final settlement shall not be such as to burden commerce, but to promote mutually advantageous economic relations. In carrying out this program it may well be that we shall have to cancel a major part of the financial obligations under lend-lease. We are entitled to ask in return that our partners shall fully live up to the other part of their obligations by eliminating barriers to commerce and promoting the betterment of world-wide economic and social relations, as well as the cause of freedom of the individual, for which this war is being fought.

As a part of this whole program the United States should join in the Bretton Woods proposals for the establishment of an international monetary fund and international bank for reconstruction and development. I recognize fully the imperfections of the Bretton Woods plan. The ablest brains of our country were excluded in its preparation and, in many respects, it was a clumsy job. The greatest danger is that this plan may be considered a final solution to the problems of money, credit, and trade. It should be obvious that it provides no final solution but merely a method and an organization through which men can work toward solutions.

If the United States were to look upon Bretton Woods simply as a method of stimulating exports, or if other nations were to consider the fund merely an easy method of obtaining American goods, nothing but disillusionment would follow. But the prolonged debate and the important amendment procured at the insistence of the minority in the House Banking and Currency Committee have already lessened this danger. The interpretations which the American delegates are

to obtain will greatly clarify the functions of the fund and the bank. They will mean that the fund is to be confined to strictly monetary stabilization and may not be used for relief, reconstruction, of other long-term capital requirements, while the bank will be equipped to make general stabilization loans. These interpretations are essential if the plan is to be a success.

A further important safeguard is provided in the proposal to give the fund and the bank a common board of governors. The success or failure of this plan will depend upon the management of the fund and the bank. The various member nations will need to appoint as their representatives men of ability and sound judgment. We would not be justified in abstaining from the proposals for lack of faith in the willingness of ourselves and other nations to appoint such men, and it is essential that we go forward with it.

CURRENCY STABILIZATION

Moreover, I see no reason why an effort should not immediately be made by the United States and Great Britain for the long-term stabilization of the all-important dollar-sterling rate. We must begin now to pick up at least part of the pieces from the wrecked London Economic Conference of 1933.

An overwhelming preponderance of world trade is carried out in these two exchanges—the dollar and the pound sterling. If once the relative value of the pound sterling and of the dollar is settled, the most important step that can possibly be taken toward the ultimate establishment of world-wide currency stability will have been accomplished. Cooperation between the British and ourselves must be a cornerstone in any program of world economic revival.

These are merely some of the measures which should be taken to lay the foundation for economic peace. We cannot expect that all of the difficult economic problems left in the wake of two world wars will be solved in a few months. I have said before, that when the war is over we shall have to wage peace with all the vigor and energy with which we have waged war. We are learning at San Francisco just how hard we must wage peace even to launch upon it. Just as the United States has taken a leading part in the solution of the political problems of lasting peace, so it must take a leading part in the solution of economic problems.

It does not lie wholly within our power to make certain that the world of the future is a world of active trade, expanding commerce, and broadening opportunity. But it does lie within our power to block such a development if we fail to assert the leadership which our strength and prestige demand. In our self-interest we should take the lead in promoting the trade which is the lifeblood of our standard of living, our enterprise system and our individual freedom.

I cannot think of any group better equipped to take leadership in these problems than the men and women who are leaders in our war-financing work. As you push forward in the drive for individual war-bond subscriptions, you are thinking not only of the weapons that money will buy, you are thinking of the billions of savings securely invested for the future, of the safeguards against inflation and the foundations of economic stability thus erected. You are helping the fight for victory over Japan. You are also helping the fight for an American future of broader opportunity, greater individual freedom, higher standards of living and greater security. We want that kind of America and we want that kind of a world.

Address by Hon. Francis J. Myers, of Pennsylvania, at Commencement Exercises, Catholic University

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague the junior Senator from Pennsylvania [Mr. MYERS] to the graduating class of Catholic University, at Washington, on May 23, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Excellency, very reverend and reverend fathers, men and women of the class of 1945, ladies, and gentlemen, it is an honor to be at the Catholic University of America today.

Having been graduated from a university and having subsequently taught school in Philadelphia, I feel some justification in believing that I can at once share the hope that is yours and the wave of relief that what a few years ago seemed a faraway day is at last here.

Since time immemorial, on each commencement day it has been said that the graduates hold opportunity in the palms of their hands. It is not my intention to dispute that statement, but to say that if ever a graduating class must accept the responsibility to grasp the opportunity that is theirs it is the class of 1945.

It is an enormous opportunity and a tremendous responsibility.

Pope Pius, in a recent statement summed up the essence of this opportunity which must be realized, as an inherent desire on the part of man "to create for himself and his own an existence of just freedom not only economic but also political, cultural, and religious."

Institutions of higher learning have, do, and must continue to play a major role in our national life if man's quest to achieve these lofty objectives is to succeed. The reason is quite simple. Education is the fountainhead of modern civilization, and the Catholic Church almost at its very inception contrived a system of education to foster the gospel of Christianity. Our present educational system is, in many respects, the outgrowth of the monastery schools and the subsequent system of education as formalized by St. John Baptist de la Salle, St. Ignatious Loyola, and other leaders of the church.

Aside from its purely academic significance education has made us cognizant of our individual and collective responsibilities to the well being of society. This is a primary function of immeasurable importance to the progress of civilization. However, if its labors are to be beneficial to mankind our educational system, like the church, must be free to perform its stated function without being coerced by foreign spheres of influence.

We have seen the havoc wrought by just such interference in Germany where the ducational system was completely dominated by the Government. The Hitler inspired negation of men's right to some semblance of intellectual freedom has resulted in a whole generation of German Youth so saturated with Hitlerian philosophies that it may take 50 years to erase its influence from the German mind and society.

For the German people it will be a long voyage back to the Elysian field of intellectual freedom.

With you graduates of the Catholic University of America it is another story.

This is a day you will long remember in a year the world will never forget.

Within the month the evil force that has laid waste to half the world these past 5 years has at last been vanquished. Yes, there was just cause for rejoicing VE-day—but there was more reason to think—to think and to remember that the war is far from over, and that even when Japan is defeated we shall not have won the victory until we have won the peace.

As after the last war—as after every conflict to date, history has chronicled the ill-fated efforts of mankind to insure the peace of succeeding generations. From the record, it would seem that peace is an experiment ever doomed to failure and that war, if not altogether a natural state, is at least tenable in the affairs of men and nations.

Our immediate objective in this war—as in every war—is the triumph of our armed forces, the crushing defeat of our adversaries. To this end the armed might of the United Nations has been marshalled to conquer the malignant ideologies of nazism, fascism and the barbarous savagery of the Japanese. The success of the Allies in Europe was hard won.. The redemption of the peoples enslaved by the Japanese in the Pacific has, and will continue to demand the utmost of our armed strength—and not a few American lives until the inevitable victory is ours.

It most certainly will be ours, but that is not the final answer to the peace. We all know that it wasn't the answer after the last war nor will it be after the present conflict has ended.

The restive period between World Wars I and II, instead of being one of peace was, perhaps, the most combustible era in human history. It was a period of extremes, by the so-called golden years of prosperity and by the greatest depression. It was a period of vainglorious self-sufficiency and a world-wide wave of intellectual isolationism that tolerated the rise of dictatorships with an amazing lack of concern. It was an age of indifference to the acts of aggression committed by the Empire of Japan in China, by Italy in Ethiopia, and by the inculcation of false moral and political philosophies into the minds and hearts of German youth by the Nazis that conditioned small nations to fear and the invaders to arrogance and precipitated the frightful war from which we are now just emerging.

We cannot be indifferent to the war, and we cannot be indifferent to the peace, without exposing ourselves to the risk of another war. It was a people's war and it must be a people's peace.

The governments of the United Nations have taken cognizance of the fact and we all realize that whatever terms of peace are eventually resolved, one great factor will determine its success or failure. It is the consideration that must be given its moral values as predicated upon the dignity of man and his right to evolve his own destiny. We cannot foresee what the future will bring; therefore, we of this generation must not again commit the fatal, time-honored error of attempting to regiment—if not plan—the lives of succeeding generations, as was done in Germany. The men engaged in the present struggle are the victims of just such planning after the last war. However, we can, and must, lay a firm foundation for a world organization to guide and help insure

the peace of future generations. We must make that effort, and with God's help we shall succeed.

At Bretton Woods, at Dumbarton Oaks, and again at San Francisco, the United Nations have participated in a series of conferences calculated to pave the way to the formation of a world security organization. They are not the end but the beginning of a program of international conferences that must be continued through the years of peace in order to maintain a vigilant safeguard over that peace—in order to equitably resolve future problems as they arise.

It is, therefore, apparent that the plans for peace must be evolutionary and not static; that the mechanics of a world security organization be geared to change.

To achieve any semblance of world order it will first be necessary to educate the people to an awareness of their individual and collective responsibilities in the democratic system of government. For an organization established to encourage world security is nothing if it is not founded upon true democratic principles and is a practical demonstration of democracy in action.

We Americans, living in the United States, might well ponder the full implications of the word "democracy," for democracy as expounded by our Constitution is only now coming to full fruition. We are only now beginning to activitate pledges already promised us in our Bill of Rights and Constitution.

I mention this because I feel that we should recognize that talk alone will not get us anywhere. Treaties can die over night, agreements be broken, and promises fade away. But, if we the people believe and say of the proposed world security organization—this is the best job that can be done now, and insist that it be made to work, then the hope for enduring peace becomes more than an ideal—it becomes a practical reality.

If we the people keep ourselves constantly informed and are articulate in our desires then no government—local, national, nor world-wide—will dare fail us.

We share with all the plain peoples of the world a common desire for peace. The plain peoples of Russia, of Belgium, or France, England, China—perhaps even the people of Japan want peace. Certainly we do in America.

However, if we simply say—now we have established an organization to maintain the peace and do nothing about it we shall have again been indulging in the naive and curious notion that wars just happen and that peace is determined merely by an accumulation of military victories. Peace is no more an accident than is war. Let us ever remember that single point.

Of late some of the more erudite defeatists in and out of Government have been castigating the efforts of the United Nations toward a security organization as projected at Dumbarton Oaks and San Francisco. The critics of the Conference may be divided into two camps: the perfectionists, and the disbelievers or confirmed isolationists who disavow the necessity of any such organization. The crux of their arguments seems to revolve around one word—politics.

In its proper usage the word still means the art and science of government despite the fact that virtually every failure, be it war or peace, has been attributed to politics. There is no need to analyze the diverse meanings given that word: suffice to say—in a democracy politics is the driving force that makes the government succeed or fail in its objectives—in the United States we the people are that government.

Our ability to govern ourselves is America's great contribution to the philosophy of government.

The proposed world-security organization is simply an expansion—an extension of that system of representative government to unite the nations in a common bond of understanding for the sole purpose of fostering peace and good will.

At a terrible cost in millions of lives, human misery, broken hearts, and untold destruction, the free peoples of the world have come to realize that nations like human beings are interdependent. These war years have conclusively proved that no nation can successfully isolate itself economically or intellectually from the community of nations. We must learn to live with our neighboring nations in friendship and peace or die side by side in another war.

At best, our efforts are frought with human fralities, but it is our sacred responsibility to make an effort toward world peace. We are doing that today. If in this vast undertaking the projected security organization has the whole-hearted approbation of the people—and I believe that it has—I am confident that it will succeed.

Educated opinion in America, mobilized to the support of this great endeavor will help insure that success.

However, if through the years it is to remain an effective instrument for world peace, it will be necessary to educate our youth to a full realization of the enormous responsibilities to which they will fall heir.

The war has instilled in us a realistic and earnest awareness of the need for collective world security as, perhaps, the last hope for enduring peace. We have grown politically adult these past few years and it is only natural that as a nation we should assume the responsibilities incidental to that high estate. Out of the carnage we of our time leave a legacy of promise and hope of fulfillment to future generations. We of today are only erecting the signposts that point the way to lasting peace. It remains for them—for you—to triumph over adversity where in the past men have failed.

I think it opportune at this time to recall the words of hope President Roosevelt expressed in a letter to Pope Pius XII in a letter written in 1939:

"I believe that while statesmen are considering a new order of things, the new order may well be at hand. I believe that it is even now being built, silently but inevitably, in the hearts of masses whose voices are not heard, but whose common faith will write the final history of our time. They know that unless there is belief in some guiding principle and some trust in a divine plan, nations are without light, and people perish. They know that the civilization handed down to us by our fathers was built by men and women who knew in their hearts that all were brothers because they were children of God. They believe that by His will, enmities can be healed; that in His mercy, the weak can find deliverance and the strong can find grace in helping the weak.

"In the grief and terror of the hour, these quiet voices, if they can be heard, may yet tell of the rebuilding of the world.

"Because the people of this Nation have come to a realization that time and distance no longer exist in the older sense, they understand that that which harms one segment of humanity harms all the rest. They know that only by friendly association between the seekers of light and the seekers of peace everywhere can the forces of evil be overcome.

"When the time shall come for the re-establishment of world peace on a surer foundation, it is of the utmost importance to humanity and to religion that common ideals shall have united expression."

They were prophetic words. The time to lay that surer foundation for world peace is at hand.

We are now on our way in the realization that freedom is more than a word—it's a way of life without which civilization is impossible.

Let us then complete the task before us. Let us implore the divine guidance of the Prince of Peace in the sacred mission which now engages our minds and hearts that in the years to come the nations and peoples of the world may live in peace and good will toward men.

Slaughter Quotas on Cattle

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. CHENOWETH. Mr. Speaker, on May 15 I called the attention of the House to the order of OPA establishing slaughter quotas on cattle in all nonfederally inspected plants, and cited this order as the principal cause of the shortage of beef in certain areas. Today I received a letter from Mr. Chester Bowles, OPA Administrator, in which he seeks to defend this order.

In my opinion Mr. Bowles absolutely fails to justify this order and I have written him to again urge that this ill-advised order be canceled immediately. Unless this is done we witness the anomalous situation of having a surplus of cattle, but the housewife is unable to purchase beef because the OPA refuses the local packer permission to process the same. This order is contributing to the shortage of meat in this country, just at a time when we should be making every effort to make additional supplies available. I am still hoping that the OPA will admit a mistake has been made and correct the same by revoking this order at the earliest possible moment.

I include herein the letter from Mr. Bowles and my reply:

OFFICE OF PRICE ADMINISTRATION,
Washington, D. C., June 6, 1945.

The Honorable J. EDGAR CHENOWETH,
House of Representatives,
Washington, D. C.

DEAR MR. CHENOWETH: It has been called to my attention that on May 15 you discussed on the floor of the House the meat shortage, attributing it to the recent order which establishes slaughter quotas on cattle in all nonfederally inspected packing plants.

We can perhaps best illustrate the need for the order by pointing to the situation in Chicago. Here is the greatest meat-packing center of the world. Yet it is experiencing a severe meat shortage. Why? Because the military is forcing Chicago packers to set aside approximately 50 percent of all their meat for war needs. In the case of beef, the set-aside covers 60 percent of all good and choice, and 80 percent of utility and canner and cutter beef. That leaves very little meat for civilians normally supplied by these packing plants. Federally inspected plants are the only ones permitted under act of Congress to ship meat across State lines. Therefore nonfederally inspected plants have

greatly expanded their kill in order to fill civilian demands in their own local areas.

The main purpose of this order is to secure a fair distribution of available meat supplies for all the people in all areas, and to halt black-market operations. The order does not in any way affect total available supplies.

Along with the slaughter regulation the Director of the Office of War Mobilization and Reconversion has outlined a program which is designed to increase the feeding of beef cattle, to encourage the maximum slaughter of cattle and hogs, and to improve the distribution of meat. This program was based on recommendations made not only by this agency, but by WFA, the Army Defense Supply Corporation, and also by the Senate and House committee which investigated the food supply. The effects of this program cannot be felt for several months. But we believe that in the interim, the control of slaughtering quotas in nonfederally inspected plants will result in a better distribution of the supplies now procurable.

Sincerely,

CHESTER BOWLES,
Administrator.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 8, 1945.

Hon. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

DEAR MR. BOWLES: Your letter of the 6th relative to the remarks I made on the floor of the House on May 15 concerning the meat shortage is before me. I appreciate hearing from you and have read your observations with great interest.

I might state that I have been in almost daily touch with your Meat Section, and have spent a large part of my time during the past few weeks endeavoring to obtain increased slaughtering quotas for small packing plants in my district. All of this work was made necessary by the unfortunate order establishing slaughter quotas on cattle in nonfederally inspected packing plants.

In almost every mail I receive a letter from one of these small packers complaining that his quota is exhausted, his customers are clamoring for meat, plenty of cattle are available, but he is prohibited from processing the same by reason of this order. As I stated in my remarks, the theory of such an order is very fine, but in practice it is drying up the meat supplies in many areas of this country.

I might state that since I called the attention of Congress to this situation I have received letters from packers and merchants in both Texas and Wyoming, advising that the same conditions prevail in those States. I read just recently where the Governor of Kansas had called upon you to rescind this order, and that many of the Kansas packers were being compelled to suspend operations.

You state in your letter that the purpose of the order is "to secure a fair distribution of available meat supplies for all the people in all areas, and to halt black-market operations." I respectfully submit that you are accomplishing the very opposite to what you are attempting to do.

The denial of meat supplies to areas where cattle are plentiful, packing facilities are available, and supplies are short does not in any way add to the amount of meat available in other areas. If this order is continued, cattle which are now ready for market will be returned to the ranges. These cattle are now in good condition and will make a fair grade of beef. They will not produce the same quality of meat if put back on grass for the summer.

I am trying to make the point that there is a large supply of cattle that should be slaughtered at this time, and any delay means the loss of a considerable amount of beef. It naturally follows that the black market will get a good proportion of these cattle, as the producer cannot continue to hold them and hesitates to send them back to grass pasture.

From all information reaching me the number of cattle arriving at the large packing centers is in excess of last year's receipts. I have been following the Denver market rather closely and according to the figures up to May 30 of this year, 30,532 more cattle had been received in 1945 than for the corresponding period in 1944.

I mention this to prove my point that by allowing the nonfederally inspected plants to process the cattle available in their local communities you are not withholding cattle from the large markets. According to all of my information, the supply is sufficient to take care of both the large and small packers.

During the past few years these small packing plants have been producing more and more of the meat supplies in their respective areas. This condition has been brought about in part by the heavy demands made upon the large packers by the Army, Navy, and lend-lease programs. Now, when you tell the small local packer that his operations will be restricted and curtailed, you are virtually advising the people of that area that their usual supply of meat will not be available. I cannot conceive how you can continue to justify such an order in the face of the maladjustments that are becoming more and more apparent every day.

I respectfully urge that you reconsider your decision in this matter and that you immediately rescind this order establishing slaughter quotas on cattle in nonfederally inspected plants. To do otherwise would be to encourage black-market operations, and I am sure that all of us can agree that it is most desirable to channel as much of our meat supplies as possible through legitimate packers. My information is that black-market operations are increasing and no doubt will continue to do so if aided and abetted by the unwise policies now being followed.

Sincerely,

J. EDGAR CHENOWETH,
Member of Congress.

Opposition to Missouri Valley Authority Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Battle of Befuddlement," relating to the efforts to prevent the passage of the Missouri Valley Authority bill. The editorial was published in the Progressive of Monday, June 4, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BATTLE OF BEFUDDLEMENT

As the Progressive recently pointed out editorially, it is worth $106,000,000 a year to the Power Trust to prevent the passage of legislation authorizing the Missouri Valley Authority. That is the difference between what the people of the Missouri Valley are paying for their electricity and what the people of the Tennessee Valley are paying for theirs.

It was to be expected that the power gang wouldn't give up this kind of cash without a struggle. Senator JAMES E. MURRAY, Montana Democrat and sponsor of the MVA bill, has disclosed that the utilities are sparing no expense to fight MVA. They have hired a large public-relations agency in New York to carry on the battle of befuddlement.

Nine of this agency's slick promoters have been sent into the Missouri Valley at a salary of $1,000 a month each, and large expense accounts. Their purpose is to foment opposition to the MVA proposal. That MVA is the only feasible plan for developing the valley on a multipurpose basis can be seen from the fact that the utilities are not fighting hydroelectric development if it is done by the Army Engineers or the Reclamation Bureau, but only by an MVA.

The expenses involved in this campaign, it is reported, will come from the old power-trust game of kickback. This was the method used, you will recall, in the notorious Union Electric scandals in St. Louis, Mo. It consists of the utilities overpaying someone for services or materials and then having the money kicked back to the utility. The utility books thus show an ostensibly legitimate expense, but fail to show that the money was returned for illegitimate purposes.

This type of a campaign is expensive, to be sure. But expensive as it is, it will never cost $106,000,000 a year.

West Point

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. DOYLE. Mr. Speaker, with real pleasure and pride on my part as Congressman from the great Eighteenth Congressional District of my native State of California, and with consent given, I herein set forth and refer to as part of my remarks a most inspiring and strengthening letter which I received from one of our gallant, ambitious, and forthright young men in uniform. It is from Pvt. Robert V. Young, and came from him some place in the world other than the continental United States.

Promptly upon coming to this great Congress, having already studied the problem involved, and obtained the benefit of the opinion of several members of the Army and of the Navy, as well as others, I announced that all of my appointments to Annapolis and West Point would be made from the results of competitive examination, to be given by the United States Civil Service Commission. I announced this by newspaper, letters, radio broadcasts, and every way possible.

I have received the utmost cooperation from everyone in the Civil Service Commission in this connection, even to the extent of their utmost cooperation in

response to my request that boys in uniform, wherever they are in the world, also be enabled to take the competitive examination which is being given in my congressional district at Long Beach on July 28 for the cadets of 1946.

Every one of the lads and their parents but one uniformly and emphatically stated they felt this method of distributing these few highly privileged responsibilities and honors was the most democratic and most thorough way.

Naturally, a few lads spread over the face of the world in the United States armed forces had not yet heard of my earlier announcement of my policy as their Congressman. So I received two letters from such lads asking for appointments. But upon these lads learning of the competitive basis, they, too, complimented me upon my policy announced. They, too, entered the list to compete with their fellow Americans in the American way of making meritorious advancement and progress.

This letter from the son of one of my constituents is so significant; it is so patriotic; it says so much in so few words as to the worth-while elements which enter into American lads' decisions, that I obtained permission to have it printed in the CONGRESSIONAL RECORD in order that all Americans, young and old, might read it and also be strengthened and inspired by it. Such inducements as this lad has to have the worthy ambition to enter West Point are the foundation stone of the prowess and the efficiency of American officers and enlisted men. The letter follows:

Congressman CLYDE DOYLE,
Washington, D. C.

DEAR SIR: My father has written me of his conversation with you in Long Beach, and he has advised that I write you concerning your 1945 West Point appointment.

I studied for the Academy's entrance examinations all through high school so that I might follow my brother's footsteps there; and when he was killed in an air accident in 1943 at the Academy I was given a third alternate appointment through the office of the Secretary of War. My brother's ill-fortuned death had made me more determined than ever to gain admission to the Academy, and this appointment gave me the chance to go to West Point at my own expense and take the June entrance examinations there.

I studied continuously until June, and managed then to pass the entire examination, both mentally and physically. However, as the principal candidate also passed, I was not admitted at that time.

Being in the Army has served to strengthen my desire to have a share in the greatness of West Point. I want the cleanness, the strength, the honor, and love of country that only West Point can give to a man. In my brother and his classmates I have seen the type of man the Academy delivers, and I want greatly to be of a common caliber with them. I am asking for your appointment, Mr. DOYLE, that I may join them in a greater service to my country than I can render here. The fighting is important now, but tomorrow it will be the planning—your job, sir; and I hope through West Point, mine.

Respectfully yours,
ROBERT V. YOUNG.

Associate Justice Jackson's Report on Trials for War Criminals

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, June 8, 1945

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD text of Associate Justice Jackson's report to the President on the trials for war criminals. Having been a member of the Senate committee which investigated the concentration camps in Germany, the report is of great interest to me, and I am sure it will be of great interest to all the people of the United States, as well as to the legal profession of the world, because it outlines views which are expressed by Associate Justice Jackson, who is to be the chief prosecutor on beha'f of this country in connection with what will probably be some of the most renowned international trials in the history of the world.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

MY DEAR MR. PRESIDENT: I have the honor to report accomplishments during the month since you named me as chief of counsel for the United States in prosecuting the principal Axis war criminals.

In brief, I have selected staffs from the several services, departments, and agencies concerned; worked out a plan for preparation, briefing, and trial of the cases; allocated the work among the several agencies; instructed those engaged in collecting or processing evidence; visited the European theater to expedite the examination of captured documents and the interrogation of witnesses and prisoners; coordinated our preparation of the main case with preparation by judge advocates of many cases not included in my responsibilities; and arranged cooperation and mutual assistance with the United Nations War Crimes Commission and with counsel appointed to represent the United Kingdom in the joint prosecution.

I

The responsibilities you have conferred on me extend only to "the case of major criminals whose offenses have no particular geographical localization and who will be punished by joint decision of the governments of the Allies," as provided in the Moscow declaration of November 1, 1943, by President Roosevelt, Prime Minister Churchill, and Premier Stalin. It does not include localized cases of any kind.

Accordingly, in visiting the European theater, I attempted to establish standards to segregate from our case against the principal offenders, cases against many other offenders and to expedite their trial.

These cases fall into three principal classes:

1. The first class comprises offenses against military personnel of the United States—such, for example, as the killing of American airmen who crash-landed, and other Americans who became prisoners of war.

In order to insure effective military operation, the field forces from time immemorial have dealt with such offenses on the spot. Authorization of this prompt procedure, however, had been withdrawn because of the fear of stimulating retaliation through execution of captured Americans on trumped-up charges. The surrender of Germany and liberation of our prisoners has ended that danger.

Summary action advocated

The morale and safety of our own troops and effective government of the control area seemed to require prompt resumption of summary dealing with this type of case. Such proceedings are likely to disclose evidence helpful to the case against the major criminals and will not prejudice it in view of the measures I have suggested to preserve evidence and to prevent premature execution of those who are potential defendants or witnesses in the major case.

I flew to Paris and Frankfort and conferred with Generals Eisenhower, Smith, Clay, and Betts, among others, and arranged to have a representative on hand to clear questions of conflict in any particular case. We also arranged an exchange of evidence between my staff and the theater judge advocate's staff.

The officials of other countries were most anxious to help. For example, the French brought to General Donovan and me in Paris evidence that civilians in Germany had beaten to death with wrenches three American airmen. They had obtained from the German burgomeister identification of the killers, had taken them into custody, and offered to deliver them to our forces.

Cases such as this are not infrequent. Under the arrangements perfected, the military authorities are enabled to move in cases of this class without delay. Some are already under way; some by now have been tried and verdicts rendered. Some concentration camp cases are also soon to go on trial.

Trials by local authorities

2. A second class of offenders, the prosecution of which will not interfere with the major case, consists of those who, under the Moscow Declaration, are to be sent back to the scene of their crimes for trial by local authorities. These comprise localized offenses or atrocities against persons or property, usually of civilians of countries formerly occupied by Germany. The part of the United States in these cases consists of the identification of offenders and the surrender on demand of those who are within our control.

The United Nations War Crimes Commission is especially concerned with cases of this kind. It represents many of the United Nations, with the exception of Russia. It has been usefully engaged as a body with which the aggrieved of all the United Nations have recorded their accusations and evidence. Lord Wright, representing Australia, is the Chairman of this Commission, and Lt. Col. Joseph V. Hodgson is the United States representative.

In London I conferred with Lord Wright and Colonel Hodgson in an effort to coordinate our work with that of the Commission wherever there might be danger of conflict or duplication. There was no difficulty in arriving at an understanding for mutual exchange of information. We undertook to respond to requests for any evidence in our possession against those listed with the Commission as criminals and to cooperate with each of the United Nations in efforts to bring this class of offenders to justice.

Requests for the surrender of persons held by American forces may present diplomatic or political problems which are not my responsibility. But so far as my work is concerned, I advised the Commission, as well as the appropriate American authorities, that

there is no objection to the surrender of any person except on grounds that we want him as a defendant or as a witness in the major case.

Third class of cases

3. In a third class of cases, each country, of course, is free to prosecute treason charges in its own tribunals and under its own laws against its own traitorous nationals—Quislings, Lavals, Lord Haw Haws, and the like.

The consequence of these arrangements is that preparations for the prosecution of major war criminals will not impede or delay prosecution of other offenders. In these latter cases, however, the number of known offenses is likely to exceed greatly the number of prosecutions, because witnesses are rarely able satisfactorily to identify particular soldiers in uniform whose acts they have witnessed.

This difficulty of adequately identifying individual perpetrators of atrocities and crimes makes it the more important that we proceed against the top officials and organizations responsible for originating the criminal policies, for only by so doing can there be just retribution for many of the most brutal acts.

II

Over a month ago the United States proposed to the United Kingdom, Soviet Russia, and France a specific plan, in writing, that these four powers join in a protocol establishing an international military tribunal, defining the jurisdiction and powers of the tribunal, naming the categories of acts declared to be crimes, and describing those individuals and organizations to be placed on trial. Negotiation of such an agreement between the four powers is not yet complete.

In view of the immensity of our task, it did not seem wise to await consummation of international arrangements before proceeding with preparation of the American case. Accordingly, I went to Paris, to American Army headquarters at Frankfort and Wiesbaden, and to London, for the purpose of assembling, organizing, and instructing personnel from the existing services and agencies and getting the different organizations coordinated and at work on the evidence. I uniformly met with eager cooperation.

The custody and treatment of war criminals and suspects appeared to require immediate attention. I asked the War Department to deny those prisoners who are suspected war criminals the privileges which would appertain to their rank if they were merely prisoners of war; to assemble them at convenient and secure locations for interrogation by our staff; to deny them access to the press; and to hold them in the close confinement ordinarily given suspected criminals.

The War Department has been subjected to some criticism from the press for these measures, for which it is fair that I should acknowledge responsibility. The most elementary considerations for insuring a fair trial and for the success of our case suggest the imprudence of permitting these prisoners to be interviewed indiscriminately or to use the facilities of the press to convey information to each other and to criminals yet uncaptured.

Our choice is between treating them as honorable prisoners of war with the privileges of their ranks, or to classify them as war criminals, in which case they should be treated as such. I have assurances from the War Department that those likely to be accused as war criminals will be kept in close confinement and stern control.

Conferences in London

Since a considerable part of our evidence has been assembled in London, I went there on May 28 with General Donovan to arrange for its examination, and to confer with the United Nations War Crimes Commission and with officials of the British Government responsible for the prosecution of war criminals.

We had extended conferences with the newly appointed Attorney General, the Lord Chancellor, the Foreign Secretary, the Treasury Solicitor, and others. On May 29, Prime Minister Churchill announced in the House of Commons that Attorney General Sir David Maxwell Fyfe had been appointed to represent the United Kingdom in the prosecution. Following this announcement, members of my staff and I held extended conferences with the Attorney General and his staff. The sum of these conferences is that the British are taking steps parallel with our own to clear the military and localized cases for immediate trial and to effect a complete interchange of evidence and a coordination of planning and preparation of the case by the British and American representatives.

Despite the fact that the prosecution of the major war criminals involves problems of no mean dimensions, I am able to report that no substantial differences exist between the United Kingdom representatives and ourselves, and that minor differences have been adjusted easily as one or the other of us advanced the better reasons for his view.

The Provisional Government of the French Republic has advised that it accepts in principle the American proposals for trials before an international military tribunal. It is expected to designate its representative shortly.

The Government of the Union of Soviet Socialist Republics, while not yet committed, has been kept informed of our steps and there is no reason to doubt that it will unite in the prosecution. We propose to make provision for others of the United Nations to become adherents to the agreement.

III

The time, I think, has come when it is appropriate to outline the basic features of the plan of prosecution on which we are tentatively proceeding in preparing the case of the United States.

1. The American case is being prepared on the assumption that an inescapable responsibility rests upon this country to conduct inquiry, preferably in association with others, but alone if necessary, into the culpability of those whom there is probably cause to accuse of atrocities and other crimes.

We have many such men in our possession. What shall we do with them? We could, of course, set them at large without a hearing. But it has cost unmeasured thousands of American lives to beat and find these men. To free them without a trial would mock the dead and make cynics of the living.

On the other hand, we could execute or otherwise punish them without a hearing. But undiscriminating executions or punishments without definite findings of guilt, fairly arrived at, would violate pledges repeatedly given and would not set easily on the American conscience or be remembered by our children with pride.

The only other course is to determine the innocence or guilt of the accused after a hearing as dispassionate as the times and the horrors we deal with will permit and upon a record that will leave our reasons and motives clear.

Fair hearings required

2. These hearings, however, must not be regarded in the same light as a trial under our system, where defense is a matter of constitutional right. Fair hearings for the accused are, of course, required to make sure that we punish only the right men and for the right reasons. But the procedure of these hearings may properly bar obstructive and dilatory tactics resorted to by defendants in our ordinary criminal trials.

Nor should such a defense be recognized as the obsolete doctrine that a head of state is immune from legal liability. There is more than a suspicion that this idea is a relic of the doctrine of the divine right of kings. It is, in any event, inconsistent with the position we take toward our own officials, who are frequently brought to court at the suit of citizens who allege their rights to have been invaded.

We do not accept the paradox that legal responsibility should be the least where power is the greatest. We stand on the principle of responsible government declared some three centuries ago to King James by Lord Chief Justice Coke, who proclaimed that even a King is still under God and the law.

With the doctrine of immunity of a head of state usually is coupled another, that orders from an official superior protect one who obeys them. It will be noticed that the combination of these two doctrines means that nobody is responsible. Society as modernly organized cannot tolerate so broad an area of official irresponsibility.

Plea of superior orders

There is doubtless a sphere in which the defense of obedience to superior orders should prevail. If a conscripted or enlisted soldier is put on a firing squad, he should not be held responsible for the validity of the sentence he carried out. But the case may be greatly altered where one has discretion because of rank or the latitude of his orders. And, of course, the defense of superior orders cannot apply in the case of voluntary participation in a criminal or conspiratorial organization, such as the Gestapo or the SS.

An accused should be allowed to show the facts about superior orders. The tribunal can then determine whether they constitute a defense or merely extenuating circumstances, or perhaps carry no weight at all.

3. Whom will we accuse and put to their defense? We will accuse a large number of individuals and officials who were in authority in the government, in the military establishment, including the general staff, and in the financial, industrial and economic life of Germany who by all civilized standards are probably to be common criminals. We also propose to establish the criminal character of several voluntary organizations which have played a cruel and controlling part in subjugating first the German people and then their neighbors.

It is not, of course, suggested that a person should be judged a criminal merely because he voted for certain candidates or maintained political affiliations in the sense that we in America support political parties. Organizations such as the Gestapo and the SS were direct action units and were recruited from volunteers accepted only because of aptitude for and fanatical devotion to their violent purposes.

Accused organizations

In examining the accused organizations in the trial, it is our proposal to demonstrate their declared and covert objectives, methods of recruitment, structure, lines of responsibility, and methods of effectuating their programs.

In this trial important representative members will be allowed to defend their organizations as well as themselves. The best practicable notice will be given that named organizations stand accused and that any member is privileged to appear and join in their defense.

If in the main trial an organization is found to be criminal, the second stage will be to identify and try before regular military tribunals individual members not already personally convicted in the principal cases.

Findings in the main trial that an organization is criminal in nature will be conclusive in any subsequent proceedings against individual members. The individual member will thereafter be allowed to plead only personal defenses or extenuating circumstances such as that he joined under duress, and as to those defenses he should have the burden of proof.

There is nothing novel in the idea that one may lose a part of or all his defense if he fails to assert it in an appointed forum at an earlier time. In United States wartime legislation this principle has been utilized and sustained as consistent with our concept of due process of law.

Major defendants

4. Our case against the major defendants is concerned with the Nazi master plan, not with individual barbarities and perversions which occurred independently of any central plan. The groundwork of our case must be factually authentic and constitute a well-documented history of what we are convinced was a grand, concerted pattern to incite and commit the aggressions and barbarities which have shocked the world.

We must not forget that when the Nazi plans were boldly proclaimed they were so extravagant that the world refused to take them seriously. Unless we write the record of this movement with clarity and precision, we cannot blame the future if in days of peace it finds incredible the accusatory generalities uttered during the war. We must establish incredible events by credible evidence.

5. What specifically are the crimes with which these individuals and organizations should be charged, and what marks their conduct as criminal?

There is, of course, real danger that trials of this character will become enmeshed in voluminous particulars of wrongs committed by individual Germans throughout the course of the war, and in the multitude of doctrinal disputes which are part of a lawyer's paraphernalia.

We can save ourselves from those pitfalls if our test of what legally is crime gives recognition to those things which fundamentally outraged the conscience of the American people and brought them finally to the conviction that their own liberty and civilization could not persist in the same world with the Nazi power.

Gage of criminality

Those acts which offended the conscience of our people were criminal by standards generally accepted in all civilized countries, and I believe that we may proceed to punish those responsible in full accord with both our own traditions of fairness and with standards of just conduct which have been internationally accepted.

I think also that through these trials we should be able to establish that a process of retribution by law awaits those who in the future similarly attack civilization.

Before stating these offenses in legal terms and concepts, let me recall what it was that affronted the sense of justice of our people. Early in the Nazi regime, people of this country came to look upon the Nazi Government as not constituting a legitimate state pursuing the legitimate objective of a member of the international community. They came to view the Nazis as a band of brigands, set on subverting within Germany every vestige of a rule of law which would entitle an aggregation of people to be looked upon collectively as a member of the family of nations.

Our people were outraged by the oppressions, the cruelest forms of torture, the large-scale murder, and the wholesale confiscation of property which initiated the Nazi regime within Germany. They witnessed persecution of the greatest enormity on religious, political, and racial grounds, the break-down of trade unions, and the liquidation of all religious and moral influences.

This was not the legitimate activity of a state within its own boundaries, but was preparatory to the launching of an international course of aggression and was with the evil intention, openly expressed by the Nazis, of capturing the form of the German State as an instrumentality for spreading their rule to other countries.

Our people felt that these were the deepest offenses against the international law described in the Fourth Hague Convention of 1907 as including the "laws of humanity and the dictates of the public conscience."

International pillage program

Once these international brigands, the top leaders of the Nazi Party, the SS, and the Gestapo, had firmly established themselves within Germany by terrorism and crime, they immediately set out on a course of international pillage. They bribed, debased, and incited to treason the citizens and subjects of other nations for the purpose of establishing their fifth columns of corruption and sabotage within those nations.

They ignored the commonest obligations of one state respecting the internal affairs of another. They lightly made and promptly broke international engagements as a part of their settled policy to deceive, corrupt, and overwhelm. They made, and made only to violate, pledges respecting the demilitarized Rhineland, and Czechoslovakia, and Poland, and Russia. They did not hesitate to instigate the Japanese to treacherous attack on the United States.

Our people saw in this succession of events the destruction of the minimum elements of trust which can hold the community of nations together in peace and progress. Then, in consummation of their plan, the Nazis swooped down upon the nations they had deceived and ruthlessly conquered them. They flagrantly violated the obligations which states, including their own, have undertaken by convention or tradition as a part of the rules of land warfare and of the law of the sea.

Cities wantonly destroyed

They wantonly destroyed cities like Rotterdam for no military purpose. They wiped out whole populations, as at Lidice, where no military purposes were to be served. They confiscated property of the Poles and gave it to party members. They transported in labor battalions great sectors of the civilian populations of the conquered countries. They refused the ordinary protections of law to the populations which they enslaved.

The feeling of outrage grew in this country, and it became more and more felt that these were crimes committed against us and against the whole society of civilized nations by a band of brigands who had seized the instrumentality of a state.

I believe that those instincts of our people were right and that they should guide us as the fundamental tests of criminality. We propose to punish acts which have been regarded as criminal since the time of Cain and have been so written in every civilized code.

In arranging these trials we must also bear in mind the aspirations with which our people have faced the sacrifices of war. After we entered the war, and as we expended our men and our wealth to stamp out these wrongs, it was the universal feeling of our people that out of this war should come unmistakable rules and workable machinery from which any who might contemplate another era of brigandage would know that they would be held personally responsible and would be personally punished.

Our people have been waiting for these trials in the spirit of Woodrow Wilson, who hoped to "give to international law the kind of vitality which it can only have if it is a real expression of our moral judgment."

Chances against top Nazis

Against this background it may be useful to restate in more technical lawyer's terms the legal charges against the top Nazi leaders and those voluntary associations such as the SS and Gestapo which clustered about them and were ever the prime instrumentalities, first, in capturing the German State, and then in directing the German State to its spoliations against the rest of the world:

(A) Atrocities and offenses against persons or property constituting violations of international law, including the laws, rules, and customs of land and naval warfare. The rules of warfare are well established and generally accepted by the nations. They make offenses of such conduct as killing of the wounded, refusal of quarter, ill treatment of prisoners of war, firing on undefended localities, poisoning of wells and streams, pillage and wanton destruction, and ill-treatment of inhabitants in occupied territory.

(B) Atrocities and offenses, including atrocities and persecutions on racial or religious grounds, committed since 1933. This is only to recognize the principles of criminal law as they are generally observed in civilized states. These principles have been assimilated as a part of international law at least since 1907. The Fourth Hague Convention provided that inhabitants and belligerents shall remain under the protection and the rule of "the principles of the law of nations, as they result from the usage established among civilized peoples, from the laws of humanity and the dictates of the public conscience."

(C) Invasions of other countries and initiation of wars of aggression in violation of international law or treaties.

The persons to be reached by these charges will be determined by the rule of liability, common to all legal systems, that all who participate in the formulation or execution of a criminal plan involving multiple crimes are liable for each of the offenses committed and responsible for the acts of each other. All are liable who have incited, ordered, procured, or counseled the commission of such acts, or who have taken what the Moscow declaration describes as "a consenting part" therein.

IV

The legal position which the United States will maintain, being thus based on the common sense of justice, is relatively simple and nontechnical. We must not permit it to be complicated or obscured by sterile legalisms developed in the age of imperialism to make war respectable.

Doubtless what appeals to men of good will and common sense as the crime which comprehends all lesser crimes is the crime of making unjustifiable war. War necessarily is a calculated series of killings, of destructions of property, of oppressions. Such acts unquestionably would be criminal except that international law throws a mantle of protection around acts which otherwise would be crimes, when committed in pursuit of legitimate warfare.

In this they are distinguished from the same acts in the pursuit of piracy or brigandage which have been considered punishable wherever and by whomever the guilty are caught.

But international law as taught in the nineteenth and the early part of the twentieth century generally declared that warmaking was not illegal and no crime at law. Summarized by a standard authority, its attitude was that "both parties to every war are regarded as being in an identical legal position, and consequently as being possessed of equal rights."

This, however, was a departure from the doctrine taught by Grotius, the father of international law, that there is a distinction between the just and the unjust war—the war of defense and the war of aggression.

Status of international law

International law is more than a scholarly collection of abstract and immutable principles. It is an outgrowth of treaties or agreements between nations and of accepted customs. But every custom has its origin in some single act, and every agreement has to be initiated by the action of some state. Unless we are prepared to abandon every principle of growth for international law, we cannot deny that our own day has its right to institute customs and to conclude agreements that will themselves become sources of a newer and strengthened international law.

International law is not capable of development by legislation, for there is no continuously sitting international legislature. Innovations and revisions in international law are brought about by the action of governments designed to meet a change in circumstances. It grows, as did the common law, through decisions reached from time to time in adapting settled principles to new situations. Hence, I am not disturbed by the lack of precedent for the inquiry we propose to conduct.

After the shock to civilization of the last World War, however, a marked reversion to the earlier and sounder doctrines of international law took place. By the time the Nazis came to power it was thoroughly established that launching an aggressive war or the institution of war by treachery was illegal and that the defense of legitimate warfare was no longer available to those who engaged in such an enterprise. It is high time that we act on the juridical principle that aggressive war making is illegal and criminal.

War that is justifiable

The reestablishment of the principle of justifiable war is traceable in many steps. One of the most significant is the Briand-Kellogg Pact of 1928, by which Germany, Italy, and Japan, in common with ourselves and practically all the nations of the world, renounced war as an instrument of national policy, bound themselves to seek the settlement of disputes only by pacific means, and condemned recourse to war for the solution of international controversies.

Unless this pact altered the legal status of wars of aggression, it has no meaning at all and comes close to being an act of deception. In 1932, Mr. Stimson, as Secretary of State, gave voice to the American concept of its effect. He said: "War between nations was renounced by the signatories of the Briand-Kellogg Treaty. This means that it has become illegal throughout practically the entire world. It is no longer to be the source and subject of rights. It is no longer to be the principle around which the duties, the conduct, and the rights of nations revolve. It is an illegal thing. * * * By that very act we have made obsolete many legal precedents and have given the legal profession the task of reexamining many of its codes and treaties."

This pact constitutes only one in a series of acts which have reversed the viewpoint that all war is legal and have brought international law into harmony with the common sense of mankind—that unjustifiable war is a crime.

Geneva protocol of 1924

Without attempting an exhaustive catalog, we may mention the Geneva protocol of 1924 for the pacific settlement of international disputes, signed by the representatives of 48 governments, which declared that "a war of aggression constitutes * * * an international crime."

The eighth Assembly of the League of Nations in 1927, on unanimous resolution of the representatives of 48 member nations, including Germany, declared that a war of aggression constitutes an international crime. At the sixth Pan-American Conference of 1928 the 21 American Republics unanimously adopted a resolution stating that "war of aggression constitutes an international crime against the human species."

The United States is vitally interested in recognizing the principle that treaties renouncing war have juridical as well as political meaning. We relied upon the Briand-Kellogg Pact and made it the cornerstone of our national policy. We neglected our armaments and our war machine in reliance upon it.

All violations of it, wherever started, menace our peace as we now have good reason to know. An attack on the foundations of international relations cannot be regarded as anything less than a crime against the international community, which may properly vindicate the integrity of its fundamental compacts by punishing aggressors.

We therefore propose to charge that a war of aggression is a crime, and that modern international law has abolished the defense that those who incite or wage it are engaged in legitimate business. Thus may the forces of the law be mobilized on the side of peace.

Any legal position asserted on behalf of the United States will have considerable significance in the future evolution of international law. In untroubled times, progress toward an effective rule of law in the international community is slow indeed. Inertia rests more heavily upon the society of nations than upon any other society.

Now we stand at one of those rare moments when the thought and institutions and habits of the world have been shaken by the impact of world war on the lives of countless millions. Such occasions rarely come and quickly pass. We are put under a heavy responsibility to see that our behavior during this unsettled period will direct the world's thought toward a firmer enforcement of the laws of international conduct, so as to make war less attractive to those who have governments and the destinies of peoples in their power.

V

I have left until last the first question which you and the American people are asking—when can this trial start and how long will it take? I should be glad to answer if the answer were within my control. But it would be foolhardy to name dates which depend upon the action of other governments and of many agencies. Inability to fix definite dates, however, would not excuse failure to state my attitude toward the time and duration of trial.

I know that the public has a deep sense of urgency about these trials. Because I, too, feel a sense of urgency I have proceeded with the preparation of the American case before completion of the diplomatic exchanges concerning the tribunal to hear it and the agreement under which we are to work.

We must, however, recognize the existence of serious difficulties to be overcome in preparation of the case. It is no criticism to say that until the surrender of Germany the primary objective of the military intelligence services was naturally to gather military information rather than to prepare a legal case for trial.

We must now sift and compress within a workable scope voluminous evidence relating to a multitude of crimes committed in several countries and participated in by thousands of actors over a decade of time. The preparation must cover military, naval, diplomatic, political, and commercial aggressions.

The evidence is scattered among various agencies and in the hands of several armies. The captured documentary evidence—literally tons of orders, records, and reports—is largely in foreign languages. An immense amount of work is necessary to bring this evidence together physically, to select what is useful, to integrate it into a case, to overlook no relevant detail and at the same time and at all costs to avoid becoming lost in a wilderness of single instances.

Some sacrifice of perfection to speed can wisely be made and, of course, urgency overrides every personal convenience and comfort for all of us who are engaged in this work.

Full preparation essential

Beyond this I will not go in prophecy. The task of making this record complete and accurate, while memories are fresh, while witnesses are living, and while a tribunal is available, is too important to the future opinion of the world to be undertaken before the case can be sufficiently prepared to make a creditable presentation intelligent. Informed and sober opinion will not be satisfied with less.

The trial must not be protracted in duration by anything that is obstructive or dilatory, but we must see that it is fair and deliberative and not discredited in times to come by any mob spirit. Those who have regard for the good name of the United States as a symbol of justice under law would not have me proceed otherwise.

May I add that your personal encouragement and support have been a source of strength and inspiration to every member of my staff, as well as to me, as we go forward with a task so immense that it can never be done completely or perfectly, but which we hope to do acceptably.

Respectfully yours,

ROBERT H. JACKSON.

For a Permanent FEPC

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune for Thursday, June 7, 1945:

The Republican Party pledged backing for a permanent Fair Employment Practice Commission in its 1944 platform. The Republican administration in New York led the States with legislation to combat unfair practices locally. Representative MARY T. NORTON, Democrat, introduced in Congress a bill to combat racial or religious discrimination in industry which crosses State boundaries. On Tuesday President Truman put the full weight of the Democratic administration back of that bill. He urged the Rules Committee to speed it to the floor of the House for debate.

The Norton bill is a composite of bills sponsored by six Republican and six Democratic Representatives. A similar bill has bipartisan sponsorship in the Senate. It has the support of great labor unions, of a long list of national church and civic organizations. It is being considered at a strategic time, at the close of the most savage of world wars fought, in part, to repudiate the arrogant and insupportable ambition of one race

to exploit or suppress others. There would seem to be no reason whatever why this bill should not speedily be made the law of the land, reaffirming the principle of equal opportunity for all.

The bill forbids discrimination in employment because of race, color, creed, national origin, or ancestry by: (1) Agencies of the Federal Government; (2) Federal contractors and subcontractors; (3) employers of six or more persons whose operations affect interstate or foreign commerce; and (4) labor unions whose practices affect interstate commerce. It dictates no social practices, invades no local legislative province. It sets up a commission similar to the one now operating under Executive order, to receive and investigate complaints, to secure voluntary adjustments, to conduct full and fair hearings, and, finally, to issue a decision and order. The order, however, cannot be enforced without court approval; if it has court approval, violation will be punishable as contempt of court. The Commission itself can impose no civil or criminal penalties whatsoever. It is a moderate bill.

We believe that FEPC should be legitimized and given permanent status by the Congress. An intransigent minority from the South would like to see it die. But the legislation is of too great importance just now, not only nationally but in its effect on world councils, to admit of politics or prejudices as usual. We hope that it may be enacted promptly.

FEPC Appropriation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star, June 6, 1945:

The Fair Employment Practice Committee is faced with another threat to its existence.

Last week the House Appropriations Committee, in reporting out the supply bill for the war agencies, failed to make any provision for FEPC funds. This was a deliberate omission, the theory being that there is no cause to continue a temporary agency created by Executive order when legislation is pending for the establishment of a permanent FEPC. But this is a line of reasoning which ignores the practical aspects of the matter.

Unless it is granted an appropriation the present FEPC will cease to function at the end of this month. Nor is there the slightest chance that a permanent FEPC will be in existence by that time. On the contrary, the legislation to set up a permanent agency is facing a long, hard fight in Congress, and there is no assurance that it will be enacted in any form at this session. Consequently, unless funds are appropriated for the existing FEPC, there will be, at best, a long period of time during a critical phase of reconversion when there will be no governmental agency to deal with the important problem of discrimination in employment.

On its record the FEPC deserves a better fate. During 1944 the agency docketed 3,835 cases. Satisfactory adjustments were obtained in 1,324 cases, the great bulk of the remaining complaints being dismissed because of insufficient evidence, lack of merit or lack of jurisdiction. These statistics indicate that the temporary FEPC deserves to be continued until Congress acts on the pending legislation to create a permanent agency. but if this is to be done, the Senate must take the initiative in making available the appropriation which the House committee was unwilling to recommend.

Farm Machinery

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article that appeared in the McLean County (N. Dak.) Independent of May 31 last, together with three postal cards dated May 31, June 1, and June 3, respectively, showing the number of tractors and combines and other farm machinery being exported to Canada through Portal, N. Dak.

There being no objection, the article and postal cards were ordered to be printed in the RECORD, as follows:

INCREASE POSSIBLE IN FARM MACHINERY

Farm machinery manufactures have been given the green light by WPB for increased production through removal on July 1 of production quota limitations for both large and small manufacturers and a broadened list of farm implements using rubber tires which may be manufactured.

Large producers whose total net sales of all products were $500,000 or more in 1941 are still required to obtain an approved schedule from WPB for each item of farm machinery and equipment that they plan to make after July 1. Monthly reports of production by large producers are still required. Both large and small producers are to continue to receive allotments of controlled materials and other priority assistance. The new order has eliminated the requirement that nonfarm users must have a rating to buy farm machinery and equipment. All orders for farm machinery, equipment and repair parts are to be treated as unrated, unless they are from one of the military agencies, WPB has requested producers to advise dealers.

PORTAL, N. DAK., *May 31, 1945.*

DEAR SENATOR: There were exported at Portal on May 30, 1945; eight small John Deere combines on rubber; six Case combines on rubber; five Case tractors on rubber; six Cockshutt tractors on rubber, two of each size; four John Deer threshers No. 36, two on steel, two rubber.

Sincerely,

NORMAN G. JENSEN.

PORTAL, N. DAK., *June 1, 1945.*

DEAR SENATOR: Exported at Portal May 31, 1945: four large McCormick Deering combines on rubber; two large John Deere combines on steel; one McCormick Deering and two John Deere threshers on rubber.

Was advised that most shipments are in boxcars. I can count only those on flatcars.

NORMAN G. JENSEN.

PORTAL, N. DAK., *June 3, 1945.*

DEAR SENATOR: There were exported on flat cars, June 2, 1945: five Case tractors on rubber; two John Deere No. 36 threshers, one steel, one rubber; four McCormick Deering self-propelled combines, No. 123, on rubber.

June 3, 1945: three large John Deere combines on rubber; five John Deere tractors on rubber.

Remember, I can't see what's in boxcars.

NORMAN G. JENSEN.

Why I Am an American

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay entitled "Why I Am an American," by George J. Chryssikos, of New York.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY I AM AN AMERICAN

(By George J. Chryssikos)

In these critical and momentous times, when the United States of America is fighting for its life, and millions of young men and young women are risking their precious lives for our right to exist as a free Nation, it is incumbent upon all of us to be self-conscious and deeply cognizant of our duties, opportunities, and responsibilities as citizens of this democracy. We hear it said every day that we are fighting to preserve the American way of life. To understand the meaning of that expression, it is necessary to know what characteristics make one an American. Once these are determined, one proceeds automatically to search for them throughout the depth and length of one's innermost self in order to be convinced of their possession. It is then only that we consciously ascertain why we are Americans.

The need of every American to participate actively as a real citizen in the affairs of this great Republic led, so significantly, to the consecration of I Am an American Day. To be an American, new or old, is more than a privilege. It is a responsibility, a trust, to be administered for humanity. On this day, in the midst of this unprecedented war, which has taken the Stars and Stripes to all continents, the American Nation lifts its heart and awakens its mind in veneration of the splendid traditions, the high ideals of its forefathers, and the virtues which enabled the American people to rise from their lowly beginnings in the time of the Revolution to their present unequalled position in the world.

But it is only on I Am an American Day that the question is asked of us: How are we going to prove ourselves worthy perpetuators of these traditions and these ideals? And on every day the answer is the same, and it is always a simple one: By being good Americans. We call ourselves Americans, don't we? The Americans who made the United States such a wonderful country, were good Americans. Were it not for the fact that they were good Americans, this would not be so good a land to live in.

And how did they start, those Americans who made America for us? What was their equipment for the tremendous task which they undertook on the morrow of the revolution? Nothing but their will to create a better world for themselves and for all American generations to come; nothing but their individual virtues, their faith in themselves and the Almighty, who helps those who help themselves; nothing but their hard-working habits, their perseverance and, of course, their intelligence. They did not even have the benefit of previous examples set for their guidance or of traditions from which to draw inspiration. On the contrary, they knew that they had to create traditions for their successors and to inspire them with their example. The knowledge of this, perhaps, made them more deeply conscious of their responsibility and fanned the flame of their enthusiasm for their great undertaking.

Yes, this is a good country to live in, in fact a country unique in the world, and we ought to be thankful to the men and women who made it. Let us not forget, however, that goodness is an infinite quality—a quality capable of endless expansion. Even good America can become a better America. And this is precisely the job of young men and young women. Let us not forget also that goodness in this imperfect and ever-evolving world of ours is always found mixed with evil. It is the job of every succeeding American generation to weed out evil from the field of American goodness and to leave the positive elements of the character of this country in a purer and nobler form.

Past generations have performed their tasks with the result that American history presents a picture of continuous improvement and progress. To do our part we must, above all, know ourselves. "Know yourself," admonished Socrates, and it is as true in our day as it was in his. When we have achieved that, our Americanism will enable us to strive and to struggle successfully for the continuation of the process of improvement of our national home.

We call ourselves Americans. But what does it mean to be an American? A purposeful restudy of American history will give us the answer. It will reveal to us the moral character of the American we should strive to be—his attitudes, his soul, his aspirations, his motives, and his creative tools. Let us search ourselves thoroughly and persistently and we will find ourselves possessors of the same moral character. Let us dig it out, awaken it, and put it to work for our country and for ourselves.

Let us ask ourselves these questions: Why am I an American? Simply because I live in America and call it my country? Because I was born of American parents or of naturalized American citizens? Or is it because I have something intangible in common with the Americans of the past who put the seal of their spirit and the imprint of their hands on this land?

A little thought will convince anyone that the latter is the correct answer. Americanism is a spiritual quality, a disposition of the mind and the heart. It is the will to be an American, a good and useful citizen of this country. Objectively, Americanism is the treasury of American tradition, the moral inheritance of the Nation. Subjectively, Americanism is one's eagerness to follow the American examples of the past, to make active and full use of the capital of American tradition, to develop and enrich the American heritage, and to further embellish the American picture.

Loyalty to the country and to her flag is of course included in the meaning of Americanism. Loyalty alone, however, is not sufficient to make one a real American. Loyalty must be accompanied with acts which are typically American, acts which are of the same character and have the same effect as those of the men and women who made this such a wonderful country.

Our country is in a war which it must win in order to survive and to preserve its liberty. Knowing this, should we consider it sufficient for a citizen to declare his or her loyalty to the flag? Certainly not. One must also be ready to defend the flag even at the risk of losing one's life or limb. But even this is not enough. Americans must strive at all times to make the national flag the symbol of high ideals, a flag worth fighting for, a flag which stands for all that is noble and sacred and worthy among civilized people.

Our flag is the symbol of freedom; it is in our hearts, however, that the love of freedom resides. One of the reasons, therefore, for which we call ourselves Americans is that we are a liberty-loving people. Our flag is the symbol of justice, because we who call ourselves Americans believe in justice. Our flag is the symbol of humanity, because we Americans are humane. Our flag is the symbol of civilization, because we Americans are dedicated to the preservation and advancement of civilization. Our flag is the symbol of progress, because American generations have devoted their lives to progress, have shown themselves capable of progress. They have believed that the realization of the hopes and aspirations of humanity lies in continuous progress. Our flag is, finally, the hope of humanity, because the American people believe in the brotherhood of man within and without the boundaries of their homeland. By word and deed, they have shown their devotion to that principle and are ready to do everything in their power to bring about its universal adoption as the basis of international relations.

To be an American, then, means to share all the ideals of the American people and to be ready to serve them. To make real Americans of our youth is the task of school, church, and family. That is their supreme duty. Let it be understood, however, that they are not required to develop any peculiar or novel type of human beings because the moral values which the term Americanism expresses are those which make better men and women in any climate. They are the moral values which all true philosophers have recognized through the ages as the imperishable treasures of civilized society. Any good man and any good woman can be a good American. No matter what our ancestry has been, no matter where we or our parents were born, no matter what our race or creed is, if we are bent on being good, we are first-class Americans.

In some other countries and in recent years, mad adventurers have undertaken to recast human character in order to create a new type of man to suit their purposes. Their moral code and their political principles are the exact opposite of all that is inherent in the meaning of Americanism. They have used the school as a factory of distorted souls. They have reduced the family to the status of a purveyor of living robots without conscience, without ideas of their own, without an independent will, without self-respect, and without that sense of responsibility and self-reliance which are the characteristics of good citizens and worthy members of society. They have even tried, and with some small measure of success, to make the church an instrument of the policy which tends to separate man from God by infusing an evil spirit where the Creator planted the seed of goodness. This sacrilegious policy has borne fruit—the only fruit that could be expected from it—violence, bloodshed and misery among men and the threat of extinction of civilization.

Americanism condemns all that. We are at war with the countries where such distorted ideas prevail, and we are going to defeat them. Our system of government, guaranteed by the vigilance of freedom-loving citizens, precludes the possibility of tyrants turning the people into a herd of animals marching at their command. Our schools, instead of forging tools for malevolent despots to use for their own purposes, are trying to bring forth the best that is in youth, so that they can serve themselves and society with the aid of the positive qualities of their nature. American schools do not subscribe to the doctrine of certain German pedagogs who teach, "Break the character of the child and make a new one for him." Our teachers believe that all that a child's character needs is selective cultivation and the development of those elements which bring him nearer to his Creator.

To all who want to assure themselves that they are Americans and to all who want to know just why they are Americans, I would recommend careful reading of the Declaration of Independence and the Bill of Rights. The founding fathers recognized and publicly proclaimed certain truths, which have become the guiding principles of American policy and American life. If we believe in them, we are Americans. And, vice versa, we are Americans because we believe in them. As Thomas Jefferson wrote in the Declaration of Independence, so we affirm that "all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. * * *"

This political creed of America is supplemented by the recognition of certain particular rights, without which there can be no liberty and the pursuit of happiness becomes impossible. As a result of this recognition, we enjoy, in this country, all the privileges which are denied to the peoples of countries ruled by autocrats. We can express our opinions without fear of punishment; we have a free press, which keeps us informed of what is happening about us and exercises the right of criticism. We can worship our God in our own way without interference from public authority or from private persons.

American citizenship is a priceless possession. However, Americanism implies duties as well as rights; but the duties which are imposed on us are such as to work for the benefit of the citizenry as a whole and not of individuals or groups invested with power to exact their performance from us. America is our common garden to which every citizen is expected to contribute his share of work and from which every citizen is entitled to reap his share of the fruit.

Here in the Western Hemisphere there has arisen a modern Phoenix based on the noblest principles of Christian civilization. Its ethical system is the perfected idealism of Plato and Aristotle; its laws are the realization of the legislation of Solon and Justinian. Here we find the sons and daughters of all the peoples of the earth gathered to create a new nation dedicated to the service of humanity. Therefore, there is no grander epic than that of 130,000,000 people cemented into one loyal nation pledged to the support of the principles of democracy and working conscientiously with their hands and intellects, their hearts and souls, to build a nation upon these foundation stones: Liberty, justice, equality.

NEW YORK, N. Y., *May 20, 1945.*

Letter From a Soldier

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. DOYLE. Mr. Speaker, the letter which I include herein from "Bob" dated May 19, 1945, comes from the distinguished son of another patriotic American home in the great Eighteenth Congressional District of my native State of California, and I include it by consent granted.

Briefly, however, part of the background of this letter coming to me from this distinguished lad's parents is that a request came to me from them to ascertain whether or not under the rules and policy of the War Department, this distinguished lad was now entitled to come home. I made inquiry for these heart-torn parents and you can judge from the boy's letter that the information sent him was that he could not be allowed to come home yet. But you will notice I am sure, Mr. Speaker, that apparently the lad, himself, had not made the request. Apparently it was the well-founded fears of the parents and meritorious domestic conditions surrounding the home which caused these patriotic parents to ask their Congressman to find out what the rules of the game of war were, as applied to their distinguished son.

So the parents sent this distinguished lad, who was fighting for our freedom, the information which, of course, was that the boy could not come home yet. The boy had not yet received my letter which I also wrote him explaining. Of course the boy did not know I was making the request about his case. This explains his mention of his Congressman in the letter to his parents in response to their letter to him.

Mr. Speaker, the letter tells its own story so much better than tongue could tell or pen could scribble—I submit it to all those who read, and know that I will have unanimous agreement that it is one of the most inspiring letters that an American lad, in almost momentary danger of being killed by the enemy, could possibly write his parents. It is worth reading over and over again and then framing in the hearts and minds of all Americans.

The reading of these two letters from these two distinguished American lads, both on the fighting front, makes me as their Congressman daily more determined never to get physically, mentally, or spiritually tired, or lack faith, that the freedoms of democracy for which these boys fight must be achieved and that I, as their Congressman, together with all the other Members of this great legislative body, must tenaciously tackle every problem, every day, in every way possible, to achieve victory for the same principles here on the home front.

MAY 19, 1945.

DEAR FOLKS: Today I received two letters from you. I was very surprised to hear of you getting the letter from Congressman DOYLE. I haven't received it. Apparently it has something to do with an effort to get me home.

As far as I am concerned no fellow ever had a better family than I have, and more than anything else, I want to be with you. But, you can, I am sure, understand something of what I feel. It isn't just being patriotic or eager—I just have to do my part. Maybe this next part is poor psychology, but several of my buddies from VT–98 are dead. First, naturally, is Yearsley; the second is my other roommate from Los Alamitos, Ensign Tschudin, the one you met in the lounge the day before I left; a third is Ensign Chaney, he was standing outside by his car talking to his girl and said "hello" as we went by; a fourth is Ensign Hilliard, he went through Oxnard and Los Alamitos with me—they have all been killed. And there are others—fellows you didn't know; Ensign Habbob, Ensign O'Brien, Ensign Dawson. After things like that I can't come home and say I have done my share. Until I have really been in combat and have done my best, I don't want to, and I wouldn't want you to expect me to come home. It won't be too long and I'll come through okay as long as I know you believe I am doing what is right. So let's all do our best at what is right—my job is here, yours is there—backing me up. We'll make out okay.

Well, that's enough of that. I just hope you can understand and please try not to worry too much.

Everything here is fine and I feel perfectly wonderful. From your letters the milk is really coming through, first letter 116 cans, the second 120 cans. Nice work.

I hope you keep on doing as well and please take care of yourself for

Your loving son,

BOB.

Failure of American Propaganda in Europe

EXTENSION OF REMARKS

OF

HON. J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include extracts from a letter which I have received from one of my constituents who is now on active duty in Europe as a lieutenant in the United States Navy. The letter reveals a situation in Europe which should be of interest to every Member of the Congress:

PARIS, *May 28, 1945.*

DEAR MR. GARY: * * * America is fast losing the war in Europe. Saturday night at dinner with a celebrated French artist, another young lady of royal lineage, and others of distinction, I heard the same sentiments expressed that are increasingly prevalent in Paris and France—"Britain won the war." Without discounting Britain's noble efforts, the future peace of the world is jeopardized if the peoples of Europe underestimate the part and power of America. It is well to leave additional occupation troops here to strengthen our hand in peace parleys, but troops quartered in German or outlying camps elsewhere do not sell the story to the people, and it is the memory of the people that will be our hope. What we need is positive propaganda to emphasize and dramatize America's contributions and the might we control in men and production. In this we are failing utterly. The man who lights the fire under the responsible parties will render our country a great service if we but take appropriate action. It may well appear that I am unduly excited, but I assure you I am merely recording the general feeling among many of our people who are in a position to see what is developing. An Army colonel, who at home was a member of the board of directors of a large Baltimore bank and is reputed to be in line for the presidency of a railroad back home, remarked the other day when speaking of the matter, "I don't see how people can be so misinformed." And in a presumably well-informed group of French men and women the other night, the suggestion that American matériel had been of help to the Russian advances was greeted with hoots of laughter.

Actions of the British support this evaluation of the value of positive propaganda. Only last week they opened a huge exhibit to dramatize the fact that Britain won the war, and visitors to the Grand Palais come away convinced. In the 3 months the exhibit is scheduled to run, tens of thousands of converts will be spreading the word. They chose colorful General Montgomery to open the exhibit, after laying a wreath on the Unknown Soldier's Tomb and parading down the Champs Elysees to the cheers of the Paris populace. The exhibit features battle scenes, equipment, simulated jungle, moving pictures, and telling propaganda blurbs. All is designed to heighten appreciation of Britain's war efforts and as is to be expected is selected material and figures, but the sum total is the distinct impression that from Alemein to the French coast and thence across the Rhine, Britain won the war. A dangling paratrooper features a display extolling the triumph of British arms at Nijmegen and Arnheim, with no mention of American troops who shared that horror. Our troops were there; I lost a brother there. The triumph of the secret weapon "Mulberry" is placed up, but the tons of matériel and thousands of troops who crossed the beaches at Omaha and Utah are not mentioned. And so it goes; all true, but not the whole story, nor calculated to be the whole story, but giving the impression of completeness to those who know no better. Figures on British production of war weopans stun you with their weight but comparison to the whole appear only when favorable or favorably put, such as "seven-tenths of all matériel used by the armies of Great Britain were manufactured in Great Britain." And so it goes. The French have several exhibits designed to exploit the feats of Le Clerc's division or of the First Free French Division.

My complaint is not that Britain is smart enough to sell herself as the savior of a continent, but that America, cockily and even arrogantly, assumes that her story needs no telling—a gross error in our thinking. In our preoccupation with the unfinished war in the Pacific, let us not leave until the full job is done here and that includes telling the peoples of Europe how that victory was obtained. We scuttle our chances of peace if we leave those people unaware of the might that lies back of our words in the councils of the nations. Let us march a hundred thousand of our homeward-bound soldiers down the Champs Elysees advertised as a few of the millions of Americans who fought to make France free. Let us drive a division or two of our armored divisions down the same street placarded as a token of the armored might forged in the "arsenal of

democracy" to free a continent of tyranny. Dress the whole with bands galore and supplement with exhibits and other media to bring the facts to them. Let us drive home the story now, not with words alone but with an avalanche of might.

I am no authority on the nature of the French people, but in my 11 months here I have come to know that no people may more truthfully cry, "I love a parade," nor are more impressed by one. England knows our manpower and matériel; they still speak of the "invasion of 1942," but the continental nations need to be told promptly and vigorously and impressively. If you can help to have that done, I say again you will have truly served the cause of peace.

When I started this I had no intention of writing at such length, but I feel that our inactivity on this score is so real a threat to ultimate and continuing peace that I risk your frown at its receipt. It might have been written by anyone of a dozen or more fellow officers with whom I work, for they feel as do I and vehemently express themselves.

Scientist Warns to Watch Russia

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Nation's News of May 29, 1945:

SCIENTIST WARNS TO WATCH RUSSIA

Many wise observers of foreign policy and adept students of political science believe that if Josef Stalin could properly adapt Russia's natural resources to industrial advantage and apply the whole, he could dictate world policy through hard-fisted military domination of Europe. It is believed that Russia in such a position would become a serious threat to America's free way of life.

It is being recalled that Russia's successful prosecution of the war against Germany is due largely to the help she received from the United States, and there are many who believe Russia would be too grateful to this Nation to ever take advantage of America's good nature. Still others point out that Russia takes the attitude that the United States was pracically forced to the charitable position of lend lease to save her own skin and keep the European fracas as far as possible from her ports of entry.

The other day America's fears could well have been advanced as being soundly founded in the warnings of Dr. Henry B. Hass, head of the chemistry division of Purdue University.

Speaking before a commercial group in Chicago, Dr. Hass pointed out that America must keep pace with, or ahead, of Russia in the matter of industrial research lest Russia outstrip the United States in future years. Dr. Hass said that this could be the final result if America's present ratio of expenditures for industrial research isn't changed.

Fact is Dr. Hass warned the British also when, speaking strictly in terms of ratios, he said, "While the United States is spending 0.3 percent and Britain 0.1 percent, Russia is spending 1 percent," and he added, "If the order isn't changed the future lineup of the three nations may be foreseen in these expenditures.

"At the start of the war, the United States made a mistake in not reserving manpower for technical training, the scientist said. Both England and Russia have continued educating thousands of scientists in the war period.

"The greatest and newest force in American life is organized industrial research," now it is just a baby.

"In 1939, a total of $300,000,000 was spent for research in this country, while the aggregate has risen now to $500,000,000. The only limit is the supply of technically trained manpower."

At the present time, American industry could use 50,000 engineers, Dr. Hass advised.

Smaller War Plants Corporation Appropriation

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. KEFAUVER. Mr. Speaker, Public Law 603, Seventy-seventh Congress, created the Smaller War Plants Corporation. Three pieces of legislation enacted by the Seventy-eighth Congress placed new important duties upon the Smaller War Plants Corporation in the matters of reconversion, contract termination and settlement of claims, and loans to veterans.

Since June 1, when appropriation bill H. R. 3368 was reported out, the Surplus Property Board issued its regulation No. 59, dated June 2, designating the Smaller War Plants Corporation as buying agent, or clearinghouse, on all purchases for veterans desirous of obtaining surplus items for any commercial, industrial, manufacturing, financial, service, medical, dental, or legal enterprise, with an invested capital not exceeding $50,000. It placed on the Corporation the responsibility of determining whether the veteran has a good chance of success in his business venture.

By this delegation of authority, the Smaller War Plants Corporation, in its 102 offices throughout the Nation, will, after July 1, 1945, receive applications from all returning veterans for surplus property they need to go into any type of business, or profession, or farming. Each veteran can obtain up to $2,500 worth, under a first priority, on the most favorable terms and conditions. They can purchase for cash, or, under special circumstances, on credit.

The above delegation of authority will greatly increase the work of the corporation and will require additional personnel. Surveys among servicemen indicate at least 1,000,000 desire to set up their own business or profession, not including farming, on return to civilian life. Therefore, several millions of dollars may be needed for administration. Each veteran must have personal attention, and be given assistance in determining his needs, and making his request therefor.

It is regrettable the Appropriations Committee had no way of knowing of these heavy additional duties, before reporting out the bill. It appears certain $7,000,000 will not be sufficient to provide full and adequate assistance to returning veterans, in addition to the other increased duties and mandates placed upon the Smaller War Plants Corporation under laws enacted by Congress. Returning veterans must not be brushed off, slighted, or neglected in their requests for any type of surplus property they wish to acquire to enable them to engage in any and all kinds of business or professional enterprise, or farming.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an editorial which appeared in the Chicago Times of May 19, 1945, as follows:

PRESIDENTIAL SUCCESSION

Since the death of President Roosevelt, there has been considerable discussion in and out of the Halls of Congress on the question of succession to the Presidency. Under a law passed in 1886, if both the President and Vice President die, the Secretary of State shall succeed to the Presidency.

The present Secretary of State is Edward R. Stettinius, Jr. It is no reflection on him personally that many persons do not believe the man holding his office should become President in the event Mr. Truman should meet with death. Mr. Truman, by appointing another Secretary of State, could pick his own successor.

This is an important matter that rises above ordinary politics and personalities to far-reaching public policy. Such a practical politician as James A. Farley, says:

"Under our present method, a Vice President who succeeds to the Presidency is in the unique position of being able to choose his own successor without reference to the electorate. In his case, a vacancy caused by his death, resignation, or removal, is filled by the Secretary of State whom he appoints, subject only to Senate confirmation. This possible short-circuiting of the electorate is a gap in our democratic procedure that we have not yet solved."

Representative MIKE MONRONEY, Democrat, of Oklahoma, a former newspaper editorial writer, has introduced a bill to authorize study of the situation by a special commission representing the Executive, Judicial, and Legislative branches of our Government.

He also advocates that the law be changed to provide that next in line should be the Speaker of the House, now held by Representative SAM RAYBURN of Texas.

A law passed in 1792, which was dropped when the latest measure was passed in 1886,

provided that next in line after the Vice President should be the President pro tempore of the Senate, now held by Senator McKELLAR, Democrat, of Tennessee, and after him the Speaker of the House.

The suggestion for a survey cannot be construed as political. Death is always a possibility among all our statesmen. It is only common sense to be prepared so that our democratic processes will function as well should Mr. Truman die as they did when Mr. Roosevelt went to his untimely end.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WELLS COUNTY VETERANS' AID COMMITTEE,
Bluffton, Ind., May 23, 1945.

Hon. GEORGE W. GILLIE,
House Office Building,
Washington, D. C.

DEAR MR. GILLIE: We have been requested by the unanimous vote of the Veterans' Aid Committee to write to you concerning a matter of mutual interest to you, to us, and to the people of America.

We know that you are wholeheartedly in accord with the principle set forth many years ago by Abraham Lincoln when he urged that we "care for him who shall have borne the battle, and for his widow, and his orphan." Veterans' legislation is, broadly speaking, but a manifestation of the gratitude of a nation of people indebted beyond words or deeds.

During the several months of the existence of this committee, it has become evident that many returning ex-servicemen feel that the endless red tape and delay definitely prejudice the advantages they expect to derive from such legislation. In several instances, it has been easy to detect a feeling of having been let down—of having had something promised to them that just wasn't available for one reason or another.

The loan-guaranty provision of the GI bill is at present the outstanding example of this condition. Legislation providing for Federal guaranty of a loan is worse than no legislation at all if such a loan isn't available, or is available weeks too late to be of any real value to the applicant.

The benefit of Government-provided hospitalization is questionable under currently rumored conditions existing in veterans' hospitals. Greatly overcrowded facilities are a major problem which we think should be immediately corrected by any means at the disposal of the Government.

Dependents of deceased veterans are often required to spend too much time and go through too much red tape in establishing claims, often creating unnecessary hardship because of delay in receiving pension or insurance checks. Letters to the Veterans' Administration and War Department which go unanswered for weeks to the bitter resentment which can be the only result of the average person's efforts to cope with the mountains of red tape involved in dealing with the Government.

We of this committee do not know whether the cause of the complaints is due to improper legislation or inefficient administration or both. We only know that there are some disillusioned boys returning from having offered their lives in order that we may continue to exist as a free people. Because of their plights, we offer this criticism; that we feel every effort should be made immediately to make the entire program of assistance to veterans and their dependents a simplified one, and a quickly functioning one.

It is for them that we protest against all things and anything that prejudices or delays their attainment of the things to which entitlement exists. It is in their name that we ask you to do your utmost to make it possible that these persons who know the meaning of the word "sacrifice" shall enjoy the things which our people, through its representatives, have declared they shall have.

We trust you will consider this letter as being constructive in its intent. We feel you are sufficiently interested to do whatever is within your power to help correct any condition existing which you believe to be wrong.

Thanking you on behalf of the boys of this county, whom we are trying to represent, and with best wishes, we are

Very truly yours,
Rev. H. T. RAFNEL,
Chairman.

Army Discharges

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter—condensed—written by a soldier presently with the Ninth Army in Germany:

MAY 28, 1945.

DEAR * * *: Just a brief note to let you know that I am coming along O. K. and half-way expect to be in the States soon. * * *

Could you, and would you, be able to stir up enough racket among a few Congressmen to get them to demand that the Army tell upon what basis men will be discharged after Japan falls, and tell it before the war is over? One of the things the enlisted men in the Army are most interested in is the basis of discharge, and the Army brass seems to consider it none of our damned business. You probably heard that the present plan was the result of a poll—yet the Stars and Stripes are full of pleas for one single soldier who was interviewed to step up and prove to the enlisted men that there was actually a poll. I think one of the greatest morale boosters to the men would be to know how they stand, how quickly they are building up points, etc.

There is no united stand upon the unfairness, of course, because everybody who doesn't get out thinks it should have been screwed around to include him in the group of discharges. Men without children think too many points were given for dependents, etc.

However, everybody would like to know now just what the score is for the future. I think Congress could make itself more popular with the enlisted ranks in the Army by making it widely known that it is demanding an open acknowledgment from the Army as to what the intentions of the postwar discharge plan will be, much more popularity than it can gain by outrageous bonus plans. Quite a few of us in the Army are fairly intelligent, and are not too enthusiastic about adding another ten to twenty billion dollar peak to the present debt. We will have to start cutting the debt down, and it will not help much to give soldiers every possible monetary remuneration. We pay taxes, too.

I have no particular gripe about the discharge plan as of now, because I feel that it was "established" to be fair. However, there is one other thing I would like to call attention to: the "combat time or battle credit" fourth of the plan has been outrageously usurped. Instead of giving combat time for the time or number of battles, it is based upon "decorations." * * *

I think it almost scandalous to give the pilot, himself, several times more combat credit than a fellow who has beaten his head against pillboxes and sweated out small-arms fire, mortars, etc., hours at a time—not just a few minutes during a spectacular and geometrically perfect "pattern bombing" period. To give a fellow who has never been on the continent several times more combat credit for warming his heels on a desk—I can't even express my disgust.

Then there is another angle: even if the Air Force does not get discharged until after Japan falls, neither will we—and while we sweat and bleed to finally earn 85 points the dog robber back at a heavy bomber base several hundred miles from the immediate zone of action will have easily earned 200 to 300.

Now just who the hell is going to get out first, the man who ate K rations for weeks, etc., or the boy who sat back a few hundred miles and complained because the daily movies were several monthse old? I have been in places where I ate cold C and K rations because I was just too damned tired to walk two blocks to get a hot meal.

I have also been in spots where one of our fellows refused a rotation furlough home because he would have had to go across a bridge to get to the rear. That particular bridge was "hot" and I saw more gallantry at its site in an hour than I have seen anywhere else in all my life put together. Yet, we don't get combat credit while the boy in the office in the Air Force does. * * *

Regardless of what the public is told—the Bronze and Silver Star awards are jokes. Every single officer in the regiment has at least one, several of them two. They are given on a quota basis, and because the officers get firsts in everything, very few enlisted men get them.

Personally, I am in for one—because the officer I work for couldn't take the embarrassment when he got his because he not only didn't earn it, he was dead drunk over two-thirds of the time we were in combat. Dead drunk, hiding in the cellar, and letting a warrant officer do his work. Drunk? He passed out several times. Yet he has the Bronze Star, kept some fellow who really deserved it from getting it because of the quota and rank.

I say I am in for one—I haven't got it yet, and wouldn't be surprised if I didn't—they are starting to give seconds to the officers. One officer got the Silver Star for gallantry in action because he visited regimental headquarters while we were in combat. Incidentally, we didn't even get any artillery on us that day. If an officer—a colonel—gets the Silver Star for gallantry in action for coming down to regimental headquarters, why shouldn't the fellows out in front of us, and us, get something in the line of combat credit for living out there months at a time?

This sounds a little bitter. I don't mean it to be. I am not a professional bellyacher,

and just can't make it sound as if I am "speaking for John"; also, it sounds as if I am mainly interested in myself. Believe me, I am not. I am just keenly interested in seeing somebody with authority force the Army to give the men of the United States—the future leaders, the present voters—something in the line of decent consideration.

Who has that authority if the Congress of the United States of America does not?

I am sorry if it sounds as if I am just griping because I am sure that would make you forget the request as soon as you finished the letter. I would appreciate it, as well as several million other guys, if you could bring this to the attention of some Congressman with "guts" enough to do something about it. I would gladly let him use and edit this letter and retain my signature, even if it meant a court martial, if it would accomplish something.

As ever,

——— ———.

Mr. Speaker, I have inserted the foregoing letter in the hope that I can get some help, action, or even advice on the questions raised by this GI Joe. The assistance of any colleague interested in this subject will be most welcome and is earnestly solicited.

Increase in Pay for Postal Employees

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by my colleague the junior Senator from Pennsylvania [Mr. MYERS] over Station KYW, Philadelphia, Pa., on April 21, 1945, dealing with increase in pay for postal employees.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Anything important to the 350,000 postal employees in the United States must, of necessity, be of importance to all Americans. I have been invited to speak this evening on just such an important matter.

In Washington last February 8, the Honorable THOMAS G. BURCH, of Virginia, chairman of the House Committee on the Post Office and Post Roads, introduced to the House legislation that provides for the reclassification of salaries for postal employees. Yesterday Senator MEAD, of New York, introduced a similar bill in the Senate. If bill number H. R. 2071 is passed it means that the average postal employee will receive a yearly salary increase of $400. Furthermore, it provides for time and one-half for overtime—a stipulation made in harmony with the recommendation of our late President that Congress deal as fairly with Government employees as it has with outside industry.

I should like to feel that the overwhelming majority of Americans will share my conviction that this bill calling for an increase in the salaries of postal employees is just and fair. I should like to feel—and know—that its passage will have your active support—because it will mark the first pay rise given the thousands of postal employees since 1925.

During those 20 years the postal worker has been the forgotten man who was never remembered. At this time when our Postal System is rendering yeoman's service to the Nation, to our millions of men and women overseas and their families at home, there is no need to eulogize the enormous wartime contribution of this vital Government agency. But it is not out of tribute alone to the unfaltering services of the Postal Department that I urge immediate action on the Burch bill. There are other equally cogent reasons which are of immense significance to the economic security of the postal employee, to his family, and to our national economy.

In 1943, when the costs of living had risen out of all proportion to the yearly wage of the postal employee, Congress authorized a temporary annual bonus of $300. It was a temporary measure and it expires June 30 of this year. Thus it is apparent that legislation must be enacted before that time otherwise the 350,000 postal employees in the United States will actually suffer a cut in their wages. If $300 was needed to balance the budget of the postal worker in 1943, how can the Nation reasonably expect them to get along on less than that today?

Anyone going to a grocery store, or a department store is very much aware that living costs are higher than in 1943—that what was once called a temporary condition has turned out to be a permanent state of affairs. And, that it is likely to remain so for many years after the end of the war. Business and industry and labor, at large, have approached the problem with a realism that has, almost without exception, resulted in higher wages in virtually every field of endeavor.

The opportunities offered by business and industry have naturally induced many postal employees to leave their Government jobs and seek work in private enterprise. More thousands have, of course, gone into the armed forces. In face of these extreme difficulties, the postal system in the United States is doing the biggest job in its history—and doing it well.

If you are wondering why the hundreds of thousands of postal employees in the Nation and the 6,000 postal employees here in Philadelphia continue to tolerate low wages and the threat of an actual decrease while workers in other fields prosper, there is but one answer.

Postal employees are public servants. They are loyal public servants to you, and to me. They cannot strike. They have no bargaining rights and they may not appeal to any agency or labor board. Legislation in behalf of the welfare of postal employees must be passed upon by Congress.

The postal workers may be public servants but there is certainly no reason for anyone to believe that they are dedicated to lives of poverty and insecurity. They are not. They can no more afford the risk of insecurity and want than can any man and his family.

Considering the fact that postal employees have not received a salary increase in 20 years, the $400 annual wage increase that would be given the average postal worker under the Burch bill is indeed modest.

For those men and women who were in the employ of the Post Office Department in 1925 when the last wage increase was effected, the passage of the Burch bill would net them the equivalent of a $20 raise for each year of their employment in that Department. During that same period the wage benefits which have accrued to workers in industry have been immeasurably greater than those accorded employees of the Federal Government.

The function of the Postal Department is of cardinal importance to our national war effort. It is a life line in the vast and complex system of communications that on one hand aids in expediting the enormous orders for war material, in relaying the messages of state that help speed the victory; on the other hand, and of commensurate importance to the millions of Americans with sons or daughters or relatives in the service, mail is a balm to anxious hearts; it means reassurance and hope, but, most of all, letters mean a link with home.

It is inconsistent that a government that has enacted progressive legislation for labor at large should at the same time fail to enact measures for the well-being of Federal personnel.

It is inconsistent and it can be dangerous, for, unless adequate provisions are made for the present welfare of Federal employees, one of two things is bound to happen: The men and women will leave the employ of the Government for the greener pastures of private enterprise or else their work will suffer. It is quite a natural reaction. Work is work, whether it is with the Government or outside, but the reward for that work in the form of good wages is the factor which will determine the caliber of man attracted to serve the Federal Government—serve the community, the State, the Nation.

There is yet another point that makes the passage of the Burch bill necessary. It is the common-sense factor, the business factor, for $400 in the pocket of the postal employee will not only serve as a bulwark for the economic security of the individual but mean an increase of millions of dollars in buying power to the community in the postwar years.

Will the Burch bill be passed? Will postal employees enjoy a greater degree of economic security by virtue of their first wage increase in 20 years? Will they be given an opportunity to better their standard of living commensurate with the workers in private enterprise?

That is up to you. It is up to you to make your will known to Congress and it is up to Congress to translate that will into action.

This is a democracy. You are the Government. Let your voice be heard.

I am speaking to you this evening in behalf of the 6,000 postal employees in the Philadelphia area. I am asking that you support the Burch bill by writing to your elected Representative in Washington today to tell him that you, too, support the bill H. R. 2071. It is important to the future well-being of postal workers throughout the country and it is vitally important to the future welfare of the Nation's postal system.

It's the best postal system in the world. Let us keep it that way.

Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, the Missouri River crosses diagonally the State of North Dakota. At the present time this stream is receiving favored consideration by this Congress in legislation now upon the books. In addition to this, the President has asked that the Missouri River and its tributaries be placed under what is known as the Missouri Valley Authority. This is a question on which good people

have deep convictions and on which they can readily disagree.

I am constantly in receipt of expressions of various sections of the State, some favoring the Authority principles and some in disapproval.

Under leave to extend my remarks in the RECORD, I include a resolution from the Board of County Commissioners of Stutsman County, N. Dak., which expresses their views on this important question:

JAMESTOWN, N. DAK., *May 26, 1945.*

Hon. WILLIAM LEMKE,
Hon. CHARLES R. ROBERTSON,
Washington, D. C.:

The members of the Board of County Commissioners of Stutsman County, whose names are hereto subscribed, respectfully represent:

That the county of Stutsman is particularly interested in the matter of unified control and resource development of the Missouri River and surrounding region and the membership of this board are members of the North Dakota Reclamation Association, so that they may keep in direct contact with the proposed project, which would be of especial advantage to this county.

That the undersigned have considered Report No. 246 to the Seventy-ninth Congress, first session, on the Missouri Valley Authority Act and the suggestions therein outlined for establishment of a valley authority as proposed in S. 555.

We desire to express our unanimous opposition to the bill and against the Missouri Valley Authority.

We are advised that the MVA bill will be considered at an early date by the Committee on Irrigation and Reclamation, and we hereby respectfully request and petition the North Dakota delegation above addressed to oppose the measure as offered and to add our expression of disapproval to the opposition already presented.

Very respectfully,

HUGO A. RIEBE,
Chairman of the Board.
WM. KREKOW,
JACK MCCARTHY,
A. C. GELHAR,
C. FLUETSCH,
Members of the Board.

Tribute to Ernie Pyle

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, June 8 (legislative day of Monday, June 4), 1945

Mr. HATCH. Mr. President, the Honorable Joseph L. Dailey, of Albuquerque, N. Mex., is one of the leading lawyers of my State. He is a native son of the State of Indiana. On the 13th day of May, at Albuquerque, memorial services were held for the late noted and, I think, great newspaper correspondent, Ernie Pyle, during the course of which Mr. Dailey delivered an address.

On this occasion the senior Senator from Indiana [Mr. WILLIS] was present. Unfortunately, he is unavoidably detained from the Senate today. He has asked that I insert Mr. Dailey's address in the Appendix of the RECORD. So now, in behalf of the Senator from Indiana and myself, I ask unanimous consent that Mr. Dailey's remarks be inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mere words, however painstakingly written, cannot pay proper tribute to the memory of Ernie Pyle, for they can neither express nor explain the love and affection in which he was held by the men and women of all our armed forces—the soldiers, sailors, and marines—the esteem of the millions of his readers in this country regardless of race or creed, or of the peoples of other nations of the world, be their positions high or low.

For almost 6 years that the world has been at war we have read so much of death and destruction that we have become almost immune to its horrors. We have heard so much of bravery and heroism that we have come to regard it as rather commonplace. It is, therefore, an unusual tribute in itself that we, joined in spirit by countless others, are paying our respects to the memory of one of millions of battle casualties, who was not himself a fighting man, who performed no unusual feat of heroism—a war correspondent who became in universal regard one of the outstanding heroic figures of the war.

The tribute of America to Ernie Pyle, however, was probably best expressed, not in messages from the world's dignitaries, but in a telegram received by Mrs. Pyle signed "A Soldier's Wife," in these simple words, "He knew me not, but I loved him."

Ernie Pyle was not an heroic figure in appearance, nor in his thoughts did he desire the reward of personal heroism or public acclaim. Frail in body, humble, human, humorous and understanding, peaceful and kindly, he was one of the last men you would have expected to emerge from the war as a national hero—the selection of other war correspondents as their leader, of the people as the one who best kept them in touch with the lives and exploits of their boys in service, and the idol of our fighting men.

Ernie Pyle, born on a farm near Dana, Ind., on August 3, 1900, educated in the School of Journalism at Indiana University, a newspaperman for over 20 years, had become a roving reporter for the Scripps-Howard newspapers prior to the outbreak of the Second World War.

It was perhaps natural that he should have journeyed to England in 1940 to report the blitz bombings of London, and then, after the entrance of the United States into the war, to have followed invasion after invasion and campaign after campaign—in north Africa, Sicily, Italy, and the Anzio beachhead, from England to Normandy and the fighting in France until the Germans were driven out, and then to the Pacific war theater, from Guam, Okinawa and to Ie Shima, where he met his death.

Ernie Pyle hated war—yet wherever he went he was in the thick of it. He loved peace and comfort—yet he lived in the dust and the muck of the fox holes with the GI's. He feared death—and yet he slept, lived and marched forward with it—from north Africa to Ie Shima.

Writing from this welter of muck and blood of things he hated and despised, from a sense of duty to tell the people back home of the kind of life their sons, husbands, and brothers were living through the hell of war, Ernie Pyle had emerged by the end of 1944 as this war's greatest correspondent—the winner of the Pulitzer prize award for 1944 for distinguished reporting, twice winner in successive years of the Raymond Clapper memorial award, the author of two best sellers—"This is Your War" and "Brave Men"—and the wearer of the Purple Heart.

This would have been sufficient reward for one with less conscientious regard for his duties than Ernie Pyle. First and last a reporter, he felt a duty to write stories from the place where the action occurred. Even greater was his belief that he owed a duty to write for the people back home of the part of the GI's in the war, and in order to report that life accurately that he share it with them.

Anyone who talked to Ernie Pyle—from New York to San Francisco—on his brief stay in this country on his way from the European theater of war to the Pacific, knew how much he dreaded the return to the active field of combat. He had no illusions as to his chances of survival—he knew that by the law of averages if he returned to action his number was probably up.

His thoughts are best expressed in his own simple but vivid words, written in one of his first columns from San Francisco before he took off on his last trip:

"There's nothing nice about the prospect of going back to war again. Anybody who has been in war and wants to go back is a plain damn fool in my book.

"I'm certainly not going because I've got itchy feet, or because I can't stand America, or because there's any mystic fascination about war that is drawing me back.

"I'm going simply because there's a war on, and I'm part of it, and I've known all the time I was going back. I'm going simply because I've got to and I hate it—"

And so he went—and will never return.

On the morning of April 18, 1945, the United Press flashed the news from Ie Shima: "Ernie Pyle, a peaceful little guy who became this war's greatest correspondent, has been killed in front-line action."

Everyone of us felt a sense of personal loss. No longer could we read Ernie's daily column with its warm, human portrayal of the lives of our fighting men and feel that we were living it with them. The men in the service felt they had lost their best and most understanding friend.

The life of Ernie Pyle had ended, a martyr to his devotion to duty, but his memory will live on and his name will be legendary.

Perhaps the deeds of this little guy who hated war but who braved its dangers and wrote so humanly and understandingly about it will help us hear in mind the utter futility of war and aid us in planning for a future and everlasting peace.

In the words of Ludwell Denny, Ernie's friend and associate of the Scripps-Howard newspapers, "Good-by, Ernie—good-by for now. God bless you, God keep you forevermore."

Old Question Revived

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Rochester Democrat and Chronicle and the Ogdensburg Journal:

OLD QUESTION REVIVED

James A. Farley has reopened an old question by proposing that a commission be appointed to examine the need for a constitutional amendment concerning the succession to the Presidency of the United States. He points to a number of defects in the present rule of succession, by which the Secretary of

State is placed next in line after the Vice President, with other Cabinet officers following in fixed order.

For one thing, as he says, the Vice President, in the event of his succession to the Presidency, could appoint his own successor by naming his Secretary of State without reference to the electorate. This might bring to the White House a man whose qualifications had never been passed upon by the people.

Objections like this may seem theoretical, for Presidents invariably pick a man of outstanding eminence, acceptable to both parties, for this important Cabinet post. Nevertheless, as Mr. Farley says, the possibility of embarrassment exists. He also points out that if both the President-elect and Vice President-elect should die before January 20, the country would have no Chief Executive until the House of Representatives decided what to do about it.

Mr. Farley has no suggestion, however, for improving the present arrangement. The framers of the Constitution, of course, intended that the Vice President should be the candidate for President who received the second highest number of votes in the electoral college, which today would mean the loser of the major party candidates. This was an eminently sensible idea, but our two-party system has not only outmoded it but made any substitute for it an obvious makeshift on which the people themselves have little or no voice.

Care of Disabled Veterans

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting the statement made before the Committee on World War Veterans' Legislation today, by Dr. John H. Baird, Assistant Medical Director, Neuropsychiatry, Veterans' Administration, answering attacks made on veterans' hospitals in recent magazine articles.

I wish every father and every mother who has a son in one of these veterans' hospitals, or in the service, as well as every serviceman and every ex-serviceman in the Nation, could read this statement and understand the true facts in this controversy.

I certainly hope that every Member of Congress will read it, because it is one of the most enlightening statements on this subject you can posssibly find.

The statement follows:

The Administrator and the Medical Director have requested me to prepare a statement on the many allegations made by Mr. Albert Q. Maisel in his article entitled, "Third Rate Medicine for First Rate Men," which appeared in the April issue of the Cosmopolitan and also a statement on the allegations made by Mr. Albert Deutsch in various issues of the newspaper PM, concerning the handling of veterans with neuropsychiatric diseases by the Veterans' Administration.

Before answering the many allegations made by Mr. Albert Q. Maisel in his second article entitled, "Third Rate Medicine for First Rate Men," published in the April issue of the Cosmopolitan, I should like to advise you that I have had ample opportunity and experience to obtain sufficient knowledge to speak on the subject matter and to point out why, in my opinion, the articles by Mr. Maisel should be entitled, "Third Rate Lying and Slander for Money and Undisclosed Purposes," instead of "Third Rate Medicine for First Rate Men." If in doing this I evidence considerable bitterness, you will pardon me because it is my natural reaction to this type of malicious sabotage of work well done under very trying circumstances. I naturally resent Mr. Maisel's personal insinuations. However, this is not the cause for my bitterness. It is the needless and malicious irreparable injury done to the peace-of-mind of the thousands of veterans whose sufferings the Veterans' Administration has honestly, faithfully, and efficiently tried to alleviate, to their relatives and friends and also the injury to the morale of the thousands of faithful employees who have toiled long hours and at times under great handicaps, to say nothing of the effect of such articles on those millions who are still members of the armed forces.

My training, experience, and knowledge of the manner in which Veterans' Administration hospitals are operated and the various treatment methods employed, especially in our neuropsychiatric hospitals, enable me to brand Mr. Maisel's articles as gross distortions of the truth, half-truths, and malicious falsehoods with malignant purposes and results. I might add at this time that half-truths are frequently more misleading and more harmful than outright falsehoods. I also believe that any fairly well informed, intelligent person without personal knowledge as to the operation of Veterans' Administration hospitals, would be fully justified in making the same appraisal of Mr. Maisel's articles from merely reading them as I have.

I shall now point out a few of the things which enable me to say that Mr. Maisel's articles are a composite of half-truths, falsehoods, and contortions of facts. First, the Veterans' Administration has had the largest hospital organization in the world for more than 20 years; second, there have been more than 3,000,000 admissions to and discharges from these hospitals; third, no other hospitals are subjected to the same official and unofficial inspections, surveys, and investigations; fourth, no hospitals serve a more critical clientele; fifth, all of the physicians in these hospitals have qualified for their positions under Civil Service and most of them are veterans; the nurses are graduate registered nurses; practically all physicians, nurses, technicians, and attendants have sons or near relatives in the armed forces; and sixth, at no time has there been any widespread or organized dissatisfaction among the patients and practically all sporadic isolated group complaints have been traced to a busybody, like Mr. Maisel, whose motive has been other than the welfare of the patients.

Now, if conditions as alleged by Mr. Maisel existed, you and the public would have known of them months before he wrote his articles. It is to me inconceivable that such conditions could exist without you and the public knowing of them, with representatives of ex-service organizations visiting these hospitals regularly, representatives of the American College of Surgeons making annual surveys of these hospitals, Red Cross representatives on duty at many of them, and gray ladies ever present to assist disabled veterans in a myriad of ways.

It has always been my experience that if conditions were bad at a hospital and if corrective action seemed indicated, it was not necessary to lie and exaggerate the conditions in order to effect needed changes. Do not understand that I am contending that the care and treatment of our patients at this time is all that we desire and that no changes are indicated and no improvement can be made. Progressive medicine calls for continuous change and improvement. What I am telling you is that we are not practicing third-rate medicine. Of course, we have crowding at some of the hospitals, but not unhuman, deplorable overcrowding. We have employees who do not measure up to our high standards, but is it our fault that the Japanese bombed Pearl Harbor? No Federal agency has lost a higher percentage of valuable trained personnel to the armed forces and war plants than the Veterans' Administration. Approximately 400 physicians, innumerable nurses, technicians, dietitians, and attendants have left us since we entered the war. They were replaced so far as possible but with inexperienced personnel and in some instances with inefficient, unqualified personnel. It has not been a matter of selecting personnel to replace the employees who left us to enter the armed services or to work in war plants. It has been a matter of accepting any personnel that could be obtained. Attendants too old to perform such duties and in some instances in their seventies have been employed, which should be sufficient to prove how difficult it has been to recruit personnel of any kind. And it has been next to impossible to obtain a sufficient number of trained nurses.

It is true that recently the Army has released physicians to us, but these physicians generally cannot replace the ones we lost, because they do not have the necessary training and experience for our work. It is also true that the Army has furnished soldiers for attendants but, here again, they are inexperienced and not capable of replacing the ones we lost. The losses of trained personnel have to some extent lessened the high degree of physical care given our patients but have not lessened the high quality of medical treatment which has been maintained even with shortages in professional personnel. Patients in our hospitals are very fortunate in that they are not dependent upon any one physician for their treatment. They have the benefit of the entire medical staff before which body each case is carefully analyzed before a full treatment plan is decided upon.

ALLEGATIONS

1. That more than 10,000 mental cases of World War II have been "shoehorned" in beside nearly 30,000 from World War I in overcrowded wards while thousands more wander in cities completely untreated or cynically discharged as "unimproved."

It is true that thousands of mental cases from World War II have been admitted to our various neuropsychiatric hospitals since Pearl Harbor. It is also true that there has been some crowding, but such crowding has not reached serious proportions anywhere. The space allotted patients in our neuropsychiatric hospitals is and always has been more than usually provided by State hospitals, and because of this liberal space allotment for each patient prior to the present war, we have, during this emergency, been able to add several hundred beds without serious overcrowding. But crowding is certainly to be preferred to jails or other places of detention, which would undoubtedly have been the disposition of many of these men. The building program of additional accommodations in our neuropsychiatric hospitals was begun soon after this country entered the war, but because of a lack of priorities in materials and labor, there has been a delay in the completion of these projects. However, a number of new buildings have been made available and thousands more beds will be ready within the near future by additions to presently operated hospitals and by the building of entirely new hospitals.

2. That the veterans are not getting the services ordered and paid for—that instead some are being beaten by sadistic brutes—tens of thousands are receiving almost no

treatment at all—and thousands, who should achieve a speedy cure, are instead being allowed to deteriorate, degenerate, and die.

The treatment program in our neuropsychiatric hospitals has been well organized for years; and since the receipt of veterans from the present war who are younger and whose mental conditions are generally more acute, the program has been modified to meet the requirements of this younger group. The Veterans' Administration has had years of experience in the care and treatment of nervous and mental disorders and our hospitals are operated along the most modern lines in respect to both diagnosis and treatment. Every accepted therapeutic agent is employed where indicated, in the individual case, including insulin and electric shock, fever therapy, physical therapy, carefully planned psychotherapy, and recreational, occupational, and group therapy, with the purpose in mind of bringing about maximum improvement and of returning the veteran to his home community and prewar occupation at the earliest possible time or else to a vocational educational assignment, if in need of and if eligible. Our patients are definitely not allowed to deteriorate, degenerate, and die because of lack of treatment. It is true that there were instances of maltreatment of patients at Lyons, N. J., and there have been allegations of brutality at other stations; but it is difficult to imagine any institution caring for the number of actuely disturbed psychotic patients as are hospitalized by the Veterans' Administration without frequent charges of this kind. Whenever such charges are made, they are thoroughly investigated; and if substantiated by facts, the most practicable solution possible is effected. The loss to the armed forces of some of the best trained attendants in our hospitals seriously crippled our service in this respect but through intensive courses of training for newly recruited attendants, both civilian and military, it is felt that the character of such services is improving materially.

3. That unless millions of us demand reform within these hospitals, there will be no hope for our veterans already in these institutions or for the many thousands who will yet pass into them from the battlefields of Europe and the Pacific; that the conditions within these hospitals are not a secret to the men who run them, they have had a chance to clean house, but they have not done so.

I deny emphatically that conditions in our neuropsychiatric hospitals are anywhere near as pictured by Mr. Maisel in his most vicious article published in the April Cosmopolitan. The problem of occasional abuse or mistreatment of patients with mental conditions has been with us ever since institutions have been established for psychiatric cases. There isn't a mental hospital in the land that is not confronted with this problem. It is also a very difficult problem to cope with. All instances of mistreatment are not necessarily intentional and sadistic abuse is very, very rare. Many times patients are accidentally injured in reasonable efforts to subdue and control them, so that it is not easy to determine whether a patient has been intentionally abused or was accidentally injured by his own hyperactivity. Abuse of patients in our hospitals has been kept to a minimum because of eternal vigilance on the part of physicians, nurses, and charge attendants to prevent it. All injuries, regardless of how minor, are investigated by medical boards or other investigations, including occasionally trained investigators from central office.

The statement of Mr. Maisel that the conditions within these hospitals are not a secret to the men who run them, is a wild sensational charge without any foundation whatever. Improvements in the operation of these hospitals have been continuous from the beginning and will continue to be made whether or not there are criticisms from any source.

4. That one Robert Hegler, former attendant at the Facility, Lyons, N. J., kept a diary disclosing certain "unbelievable brutality":

(a) Hegler wrote, "A veteran of this war was tied to a chair with a sheet. One of the attendants told him to shut up. When the patient refused, the attendant threw several virgorous punches into him. Five other attendants, including a head attendant, looked on without comment."

(b) "The same night * * * I saw another attendant hit a young, nonresistive patient in the back * * * and hit him on two different occasions while he was in bed."

(c) "Two weeks later I was ordered by the head attendant to turn cold water on a patient held forcibly under a shower."

(d) Hegler wrote of patients being "wrung out"—the attendants' lingo for choking a veteran with a towel around the neck—while other attendants looked on and did nothing.

(e) Hegler told of a patient who was held down by one attendant and kicked in the head by another, until two stitches were required to repair the damage.

(f) Hegler reported "one seriously ill patient was beaten up in bed by two attendants." This man, according to Hegler's diary, died the next day.

(g) Hegler reported "a nurse throwing medicine into a patient's face when he failed to finish drinking the dose."

5. That Investigator M. W. Vogtman took evidence at Lyons, N. J., following which, on November 17, 1944—"after the storm in the papers had blown over—General Hines issued a statement, admitting abuses and promising a clean-up."

Mr. Maisel has apparently accepted completely the allegations of Mr. Hegler, who was a former attendant assigned to us at Lyons with a group of conscientious objectors. Upon careful investigation, no substantiation could be found for many of Mr. Hegler's statements, some of his allegations were sustained and some were sustained only in part. It is, therefore, my belief that Mr. Maisel grossly exaggerated the situation in order to paint as black a picture as possible of the whole affair.

6. That the investigation "reveals some substantiation of the charges made by Robert Hegler. The abuses were to a considerable degree due to * * * untrained and inefficient attendant help and inadequate coverage of the wards."

"The untrained and inefficient attendant help and inadequate coverage of the wards," were conditions over which the Veterans' Administration had very little, if any, control during the period so many of our best-trained attendants were taken by the armed forces, and also when physicians were being called into the Army and Navy and nurses were resigning to enter one of the armed services, the number of these professional personnel were so depleted that training programs were of necessity seriously affected. This situation existed in the face of marked increases in hospital admissions, many being acutely disturbed, suicidal and homicidal, and, therefore, requiring special nursing and attendant attention. However, this unsatisfactory state of affairs has improved, as more beds have become available and as more professional personnel have been assigned to permit of better supervision and training of the subprofessional group.

7. That the Administrator had stated, "Appropriate steps are being taken to remedy the situation as to the attendant group, as well as certain changes in the professional and subprofessional groups, and whatever disciplinary measures are warranted will be taken."

This allegation is true and has been carried out.

8. That Mr. M. E. Head, the manager of the Lyons facility during the period of "alleged abuses," was still manager in January 1945, and that Col. L. V. Lopez, chief medical officer of the hospital, was still chief medical officer.

This allegation is very misleading and a subtle attempt to place responsibility for the few instances of abuse upon the manager, Mr. Head, notwithstanding the fact that in allegation 6 Mr. Maisel correctly stated the abuses were due to untrained and inefficient attendant help. The same inference is made concerning Lt. Col. L. V. Lopez, chief medical officer. Of course these official were not removed for abuses of patients they could not have prevented and did not in any way condone. It is not the practice of the Veterans' Administration to persecute loyal employees who have rendered efficient service for years.

9. That the physician who had been in charge of the acute service during the period covered by Hegler's charges had, according to Colonel Lopez, been ordered transferred to another facility and "He had not been discharged, although the substantiated abuses—to use the Administrator's own mild phrasing instead of the words they reserve—had been inflicted upon patients under his guardianship and by employees under his control."

The implication that the physician in charge of the acute service was responsible for the instances of abuse and should have been separated has no basis in facts. The administrative action taken in transferring this physician was in keeping with the evidence developed.

10. That he was informed by Colonel Lopez January 15, 1945, that "no dismissals had occurred, although a few attendants—two or three—had been permitted to resign."

Appropriate disciplinary action was taken against all attendants involved in the mistreatment of patients. You can't dismiss employees who have resigned or left the service.

11. That Robert Hegler was sent to prison because he violated the rules that forbid a conscientious objector to leave the hospital grounds without permission.

The subtle inference that the Veterans' Administration had something to do with Robert Hegler being sent to prison for reporting abuses of patients at our Lyons hospital is a vicious slander. The officials at Lyons and at central office all appreciated the bringing to their attention the fact that patients were being abused by a few employees at that hospital. Furthermore, they all cooperated with Hegler and everyone else, and did everything possible to establish the facts in order to prevent further abuses.

12. After stating that "restraints" of any sort are forbidden in many of the most progressive mental hospitals, Maisel reported that "at veterans' hospitals 'restraints' include these great cuffs—leather bands 3½ inches wide, that are locked over the wrists and tied to a leather belt fixed tightly about the patient's waist."

You will note that Mr. Maisel omitted naming the so-called "most progressive mental hospitals" that forbid the use of restraints. Restraints of patients are not limited to mechanical devices such as cuffs, camisoles, restraining sheets, etc. Continuous flow tubs and neutral packs are forms of hydrotherapy, but both are also restraints. Psychiatrists have honest differences of opinion as to the extent various restraints should be used. However, in our hospitals at no time has there been uncontrolled use of mechanical restraints such as cuffs, restraining sheets, etc. The use of mechanical restraints to control certain patients at certain periods is predicated entirely on what is believed to be for the best interest of the patient restrained and the other patients on the ward. On the acute wards there are usually a few homicidal and several suicidal patients. The homicidal patient is not necessarily danger-

ous to himself and may be in fairly good contact. However, frequently he is very dangerous to other patients and to attendants and other personnel. He strikes frequently without warning and often injures the person he strikes, sometimes seriously and occasionally fatally. This kind of patient cannot be kept in a continuous flow tub or pack all the time and as he is not necessarily hyperactive and disturbed, hydrotherapy does not prevent his taking an impulsive swing at another patient or an employee when he is on the ward unrestrained. Of course, a patient of this type could be controlled by being kept in solitary seclusion or under the influence of sedatives, but most of us believe it is better to put him in cuffs and give him the freedom of the ward. In fact, it is more humane to do so. The suicidal patient or the hyperactive one may have simply the urge to inflict injury on himself, but not infrequently he is also dangerous to others.

Occasionally hydrotherapy, in the form of tubs or packs, will not relieve the hyperactivity or the desire for self-destruction, and in these cases, in their best interest and for the protection of others, mechanical restraint is used. Mechanical restraints, as well as all other types, are not used on any patient except upon specific orders of the physician and are always applied in his presence. Such restraints are removed at frequent intervals and completely discontinued as soon as the patient's condition will permit. Indiscriminate use of mechanical restraints is forbidden and, as stated before, they are used only when believed to be for the best interest of the patient and when hydrotherapy, the moderate use of sedatives, and psychotherapy fail to produce the desired results. There are no hospitals in the country which make greater use of hydrotherapy than the Veterans' Administration hospitals. This form of treatment is available at our hospitals during the entire 24-hour period. Incidentally, our hospitals which have tried to operate without resorting to mechanical restraints had more injuries than those where intelligent use was made of them. The picture in the Cosmopolitan of a patient wearing cuff restraint would lead the reader to believe that the Veterans' Administration is resorting to the methods of the Spanish Inquisition. These cuff restraints are not uncomfortable, being well padded, and loosely applied will permit the patient to smoke and, what is more important, allow him freedom to walk about the day room, read, play cards or checkers, and do most anything any other patient does.

13. That the Veterans' Administration has denied "advances to its patients for 3 or 4 years after they had been widely adopted throughout the country on the grounds that the veteran must not be experimented upon."

Just as soon as new therapeutic methods are introduced, the Veterans' Administration begins investigating their merits, and when there is a reasonable assurance that such procedures are valuable they are employed as soon as equipment and supplies can be procured and physicians can be specially trained to administer them. The Veterans' Administration has always been conservative in the application of new and especially radical forms of therapy as a precautionary measure, but it certainly cannot be said that it has denied such therapy to its patients for any appreciable length of time.

14. That when a new procedure (as to treatment of mental cases) is "at last grudgingly adopted, I have found it turned over to sketchily trained, overworked, doctors whose every move is, of necessity, an experiment conducted at the patient's risk."

All doctors, both within and without the Veterans' Administration, are overworked these days and all have assumed extra duties whether in the Veterans' Administration, the Army, Navy, Public Health Service, or in civil life. If Mr. Maisel has the answer to the doctor-shortage problem, we would be glad to have it. Shortages will become more acute as time goes on, as I understand there are no draft deferments for medical students, except those in IV-F. As to our doctors being sketchily trained, I can say that they have been adequately trained in the administration of the special therapeutic methods Mr. Maisel had in mind. The Veterans' Administration has followed the recommendations of qualified medical advisers as to the time necessary in training physicians in these special methods. And it might be said in passing in regard to the statement "overworked doctors, whose every move is, of necessity, an experiment conducted at the patient's risk," that under any conditions, in any hospital, shock treatments are attended by certain risks.

15. That the veterans' hospitals have no internes or psychiatric resident physicians; that Col. John H. Baird told him on August 15, 1944, "Our younger men seldom come to us with psychiatric training. But we give them a 2-month indoctrination course," and further, that he was told by Dr. Baird that "We'd rather have men who didn't know any psychiatry. * * * Then they can learn our methods when we detail them to our indoctrination schools."

It is true that the Veterans' Administration has no internes or residents in its hospitals. However, steps are being taken to develop the institution of both. Until now, internes have not been utilized for the reason that until now our hospitals have not treated women in any appreciable numbers and have, therefore, not been able to offer a well-rounded clinical service which is necessary for candidates to qualify for State board examinations. As to the establishment of residences in particular, this requires most extensive arrangements, so that when residences are established there will be no question but that they will be recognized by the council on medical education and hospitals of the American Medical Association and the specialty boards.

Mr. Maisel, in referring to his conversation with me, has given the impression that the Veterans' Administration does not desire psychiatrists nor does it intend to see that its physicians receive psychiatric training. This is, of course, ridiculous. What I told him was that we preferred recent graduates coming to us without previous neuropsychiatric training or experience unless such training were of the best, for then we could assign them to recognized psychiatric centers for intensive courses and to our own hospitals for initial practical training.

Psychiatrists are at a premium, there being less than 4,000 known specialists in this field in the entire Nation. The Veterans' Administration needs psychiatrists very badly, but first of all physicians are needed and very few are psychiatrically trained when reporting for duty. A group of 17 physicians are to be assigned for a special course in neuropsychiatry at an Army hospital next month, and it is expected that this will be a continuous process.

16. That not a single one of all the hundreds of doctors who man these veterans' mental hospitals is a diplomate of the Board of Neurological Surgery and that only 22 staff members are to be found on the latest list of the American Board of Psychiatry and Neurology.

17. That in contrast with the foregoing, St. Elizabeths Hospital, with a staff of only 43 full-time medical officers, has 26 diplomates on the board's list—"more than can be found in all 30 of the veterans' facilities."

18. That the New York State system of psychiatric hospitals numbers 85 diplomates on its hospital staffs.

It is true that none of our full time physicians are diplomates of the American Board of Neurological Surgery. All neurosurgery in the Veterans' Administration is done by outstanding consultants in this specialty, who have a national and international reputation, including Dr. Walter Dandy, of Baltimore, Dr. Howard C. Naffziger, of San Francisco, and Dr. Loyal Davis, Chicago.

The statement concerning the relatively small number of diplomates of the American Board of Psychiatry and Neurology among the staff members of the Veterans' Administration is true. In this connection, the establishment of a medical corps, which would permit of the selection of physicians on the basis of their professional qualifications, primarily, as recognized by the medical profession, and also of their promotion within the organization upon the basis of professional examination, would undoubtedly be desirable. Certification by the various specialty boards would naturally become a part of the requirements for promotion to the next higher grade.

19. The Veterans' Administration declined to instruct surgeons in the performance of the operation described as prefrontal lobotomy until 1944, although this operation was first devised in 1937; that "Last year it sent four physicians from the Marion, Ind.; Downey, Ill.; Roanoke, Va.; and Lyons, N. J., facilities to study under Dr. Freeman. After waiting so long, you might think the Veterans' Administration could wait a little longer—until these men completed 6 months or a year of resident training. But no; they just took a 2-week brush-up course."

The operation of prefrontal lobotomy is a very radical procedure and is by no means generally accepted by the medical profession. Very few operations of this type were performed in this country prior to 4 or 5 years ago and even now are frowned upon by many competent medical authorities. The physicians selected for training in the technique had all had training and experience in general surgical procedures, which is a prerequisite and a 2-week course is considered sufficient by competent medical advisers of national reputation. Only men at stations where neurosurgeons were not available as consultants were trained in the technique of this procedure.

20. That in reference to the above mentioned surgical procedure he offered the following comment: "One cannot help wondering why the Veterans' Administration waited 7 years before it considered this operation no longer experimental and then plunged into it with a bang, permitting ordinary surgeons to perform so delicate an operation instead of hiring brain specialists as operating consultants."

It is believed this accusation is answered above. The Veterans' Administration still considers this operation as experimental and this opinion is shared by others competent to express an opinion.

21. That in the last available Annual Report of the Administrator of Veterans' Affairs it is shown that 23,147 veterans were discharged from these 30 hospitals during a year. But of all these, less than 8 percent are rated as recovered, apparently recovered, or cured!

22. That the last available record of St. Elizabeths Hospital shows that more than 45 percent of its discharged male patients were rated as recovered. It is also a Federal Hospital, yet it achieves a recovery rate nearly six times as great as that of the Veterans' hospitals.

The statement concerning the discharges quoted from the Annual Report of the Administrator of Veterans' Affairs does not apply only to those discharged from the 30 neuropsychiatric hospitals, but the total neuropsychiatric patients discharged from all hospitals of the Veterans' Administration,

during the fiscal year, 1943. The figures themselves are statistically correct. Comparable figures for the fiscal year, 1944, show 31,444 discharges for neuropsychiatric conditions from all hospitals with 6.2 percent recovered, apparently recovered, or cured. However, of this group of 31,444, 44.1 percent were psychotic. Statements of the kind made by Mr. Maisel which were of course intended to place the Veterans' Administration in a bad light, involve merely the matter of terminology. The Veterans' Administration has always been conservative in the use of the term "recovered," especially in cases of psychosis. Indeed, in most psychoses, the question of whether recovery, as such, ever occurs is a moot question.

If we could use the expression "in remission," we would show a much higher rate of so-called recoveries. Many—perhaps the majority—of those patients discharged against medical advice would otherwise have been considered as recovered, but we cannot make a statement as to their condition unless examinations are completed and a diagnosis is made. Of the total of 20,129 discharges from neuropsychiatric hospitals during the fiscal year 1944, 5,540 were discharged as against medical advice. This represents more than one-fourth of the total discharged.

23. That the Navy refuses to discharge most of its mental cases to the tender care of the Veterans' Administration, but that it insists instead on sending these men to St. Elizabeths.

This statement is a definite misrepresentation of fact. For many years—long before the creation of the Veterans' Administration—the Navy has sent its mental patients to St. Elizabeths Hospital, not discharging them from the Navy until a diagnosis is confirmed. Many of them are later transferred to Veterans' Administration hospitals.

24. That the records of the Lyons facility covering the year 1944 show that "Month after month patients have been sent out on so-called trial visits—3-month experimental discharges—until the year's total reached over 500. But more than one-fourth of all these men—sent out because there was no harm in doing so—failed so decisively to adjust to the outside world that they had to be recommitted."

A report from Lyons discloses that during the year 1944 a total of 725 patients were on trial visit and that of this number only 125 returned to the hospital during the same period. In other words, 17.2 percent of those on trial visit failed to make a satisfactory adjustment. This is actually an excellent record.

Mr. Maisel is apparently ignorant of trial visit purposes and procedure. Hospitals with comparatively large numbers of patients on trial visit are to be commended, as the object of treatment in a mental hospital is to hasten the day when a patient may return to his home community, and every day out of the hospital is a step ahead for the patient. Trial visits are approved for patients only after they have shown evidence of a definite remission in their psychotic symptoms and have at the same time made a good hospital adjustment. For a period of time they have had no conflicts with their environment, have shown a sustained interest in some constructive activity, and have required only a minimum of supervision. When patients have improved to this extent, an effort is made to determine what the environment will be to which they are going on trial visit and what plans are being made for occupation and recreation outside the hospital. Only when this investigation indicates that the veteran will have a reasonably satisfactory opportunity to continue his improvement does the medical staff recommend a trial visit. While on trial visit, he is contacted at least once during a period of 90 days either by the hospital social worker or by a social agency in his community and a report is made of what his adjustment has actually been. If this report indicates that the patient is making a satisfactory adjustment both from a social and economic standpoint, then the trial visit may be extended, or the patient may be discharged. If the report is unfavorable, the hospital initiates efforts to have the patient returned for further treatment. Mr. Maisel indicates by the statement that "these men * * * sent out because there was 'no harm' in doing so," that no care or interest is shown by the medical staff in granting trial visits. It is obvious that Mr. Maisel has no conception of modern psychiatric principles and that he does not appreciate the consideration given to these cases both before granting the trial visit and while the patients are out of the hospital.

Mr. Maisel is further laboring under the mistaken idea that all patients are committed to the Lyons Hospital, or at least he gives this misleading impression in the statement that patients who fail to adjust to trial visit status had to be recommitted. Less than 30 percent of all the patients at Lyons are committed by the courts. The remaining 70 percent are there as voluntary patients and cannot be held against their wishes.

25. That in company with the acting chief of the acute service he visited disturbed wards for examination of five patients in seclusion; that we peered through a tiny porthole in the doors, into these seclusion cells. Each had a bed as its only furniture. Each held a veteran in a shapeless bathrobe from which the cord had been removed. These, I presumed, must be dangerously violent patients. That an old man whom Maisel judged to be 90 pounds in weight was stated by the acting chief of the acute service to have been in seclusion to protect him from other patients. Comment was made by Maisel of a touching bit of consideration, that of protecting a man by confining him alone in a locked cell.

According to a signed statement made by Capt. Harry Hoffman, acting chief of the acute service at Lyons, Mr. Maisel visited that service on January 15, 1945, and remained in the building about 20 minutes. He visited 3 of the 4-day rooms, 2 dormitories, the pack room, and a few of the seclusion rooms.

The following is Captain Hoffman's statement relative to Mr. Maisel's reference quoted above:

"On the day of Mr. Maisel's visit the total number of patients in seclusion was two. Mr. Maisel refers to the seclusion room as cells. These rooms have exactly the same construction as all other single bedrooms in the hospital, and are converted into seclusion rooms merely by locking the door. They differ in no respect from a nonmental hospital room such as one might place an appendectomy patient in. They have linoleum floors, a large glass window or windows and a large radiator behind a protected, metal grill. Construction of the room is exactly the same as that of the manager's office.

"One of the two seclusion patients was James Berry. This man is small, of slight stature, who presents as his outstanding symptoms, agitation, confusion, verbal activity, physical restlessness, which cause him to wander about constantly touching other patients, engaging them in rambling conversation and by so doing frequently causing other patients to become angry with him and to assault him. Inasmuch as this man is well along in years and possesses a cardiac disease, it was the unanimous opinion of three ward surgeons that he be placed in a locked room in order that he might be protected from the assaults of other patients. This action was ordered only after he had been actually injured in other wards. The second seclusion patient was a man on 2–A who was kept in seclusion because of continuous nudism. Mr. Maisel refers to shapeless bathrobes from which cords have been removed. These bathrobes do not have cords to begin with."

It might be stated that seclusion of certain types of mental patients is definitely the best method of handling them. The two cases cited by Captain Hoffman are good examples and another type of patient for whom seclusion is indicated is one who becomes agitated in the company of others.

26. That a patient's dayroom measuring "perhaps 40 by 60 feet, was furnished with about a dozen hard chairs and benches. The rest of the forty-odd patients had the choice of standing or sitting on the cold concrete floor. Half a dozen were sleeping on the floor, although a dormitory, just across the hall, was filled with beds." Maisel quoted the Acting Chief of the Acute Service as saying, "We can't let them stay in bed during the daytime. It's not good for them."

This is definitely a gross distortion of the facts, as Captain Hoffman's statement quoted below will show:

"The furniture of the dayrooms of building No. 2 is made up of heavy oak chairs, benches, and tables. The census of the acutely disturbed ward is 74. By count, the number of seats supplied by benches and chairs add up to 66. If all seats are occupied and if the ward census was up to complete capacity, only 8 patients would have to stand or lie on the floor. However, there are always patients who are working on occupational details, at recreational events, etc., so that in actual practice if all the patients on the ward at any one time were seated there would never be necessity for a patient sitting on the floor or standing because of the lack of available seats. Psychotic patients do have a tendency to sit or lie on the floor in preference to using benches or chairs. Continuous effort is always being made by attendants to persuade these patients to use the furniture. It is obviously poor therapy for a psychotic patient to allow them to stay in bed whenever they wish. An effort is always being made to get them to perform normal daytime activities during the daytime. There are no concrete floors in any dayroom, dormitory, or hallway."

27. That the Acting Chief of the Acute Service reported to Maisel as to the restraints used daily, "Thirty is about tops," adding, "That doesn't mean all at once. That means 30 in any one day. We take them off every 3 hours."

It is believed that this allegation of Mr. Maisel is appropriately answered by Captain Hoffman, whose statement is quoted below:

"According to this writer's recollection, he did make the statement that 30 restraints a day was the maximum used on building No. 2. Thirty patients out of almost 2,000 patients in a mental hospital is not considered a large number of hyperactive, violent patients who require measures to prevent the infliction of injuries upon themselves or others."

28. That in answer to Maisel's interrogatory as to the limitation in time of the use of restraints the acting chief of the acute service stated in part: "After 3 hours the attendant must take the man to the lavatories. Then, if the doctor prescribes it, the restraints may go on again."

Captain Hoffman's comment on this allegation is as follows:

"The acting chief of the acute service gave Mr. Maisel the regulation concerning the use of restraint. The regulations as promulgated are considered humane and obviously for the protection of the patient and in promoting his comfort."

29. That the vast majority of other veterans' mental facilities are overcrowded—brimful, filled to capacity and far beyond. In September 1944 the facility of Northport, Long Island, had 437 more patients than it was built to hold. Downey, Ill., had an overload of 191; Coatesville, Pa., an overload of 215; Waco, Tex., an overload of 243; Perry Point, Md., an overload of 196. At Northampton, Mass., 992 patients are crammed into buildings built for 770. And at Lyons, on January 15, 1945, 1,901 patients were housed in a hospital built for 1,716.

It is believed that this subject of overcrowding has been adequately discussed. I believe you are all aware of the fact that in practically every town in the country, at the present time, hospitals are overcrowded, as evidenced by beds being placed in hallways, on porches, and elsewhere in order to meet the wartime demands. Such crowding in veterans' hospitals is neither disgraceful nor needless.

30. That the Veterans' Administration does not admit overcrowding actually exists and that capacity has been increased by the simple device of adding so-called emergency beds, a process which has "already crowded more than 3,000 extra beds into spaces never designed for them and which can go on indefinitely."

This allegation has been discussed previously.

31. That "at Northport I found dayrooms and even a dining hall converted into such 'emergency bed' wards, while patients were forced to eat in a relocated dining room, underground, in a dark cellar. At Lyons even the 'disturbed' patients' dormitories have been crowded so that rooms designed for 22 beds now hold 33 or more."

Mr. Maisel visited Northport several months ago, remaining on the station from about 11 a. m., until 4 p. m. During his visit he interviewed the manager, Col. Louis F. Verdel, the clinical director, Lt. Col. H. E. Foster, and the Chief of the Research Unit, Lt. Col. James Huddleson.

Colonel Verdel's comment on the specific allegation is as follows:

"In this allegation I presume that Mr. Maisel refers to our dining room in building No. 9. It is true that in order to provide additional beds to take care of patients coming from the Army, the dining room on the first floor of this building was converted into a dormitory, and the dining room was moved to a room in the basement. This room is 30 feet by 44 feet 9 inches plus a space 13 feet 6 inches by 26 feet which is used as a diet kitchen. The floor to this room is 5 feet below ground level; the ceiling is 5 feet 3 inches above ground level. There are 7 windows 36 inches wide by 36 inches high with 16 lights of glass, 7 windows 44 inches wide by 36 inches high with 20 lights of glass, and 1 window 28 inches wide by 36 inches high with 12 lights of glass in this room. Proper ventilation is maintained from 3 directions. There are draperies at these windows, and tablecloths are supplied for the tables. I would not consider this an ideal dining room, and neither would I say that it was objectionable."

32. That at Northport, Long Island, in August, 1944, only 19 patients were discharged as having achieved "maximum hospital benefit" while 89 were discharged "against medical advice," despite the fact that these are all legally committed patients who cannot leave of their own free will.

Colonel Verdel's comment on this allegation is as follows:

"In this allegation Mr. Maisel has strayed from the facts, and has only stated half truth. In August of 1944 the records of the clinical records office disclose that we had 193 admissions and 133 discharges. It is true that 89 of these discharges were against medical advice. It is not true that we had only 19 discharged maximum hospital benefit. We had 28 discharges as maximum hospital benefit and the 89 that were discharged against medical advice were not legally committed patients as stated by Mr. Maisel. As we all know, the majority of our admissions have been coming direct from the Army. In many instances the relatives were here 1 or 2 days after the patients were admitted demanding their discharge. The records disclose that the average stay in the hospital of 86 of these 89 patients was 17 days. Their discharges were demanded before we had had an opportunity to get them before the medical staff for final diagnosis. We had a number of cases that were minors and the relatives refused to sign the voluntary admission application. Every effort was made to prevail upon the relatives that the patients should remain at least until they had been taken before the staff, and those discharged against medical advice were cases that were either in remission, or partial remission, or questionably psychotic. In each instance the relatives were given the benefit of all the information that we had on the patient. In no instance in August, or any other month, have we discharged a patient against medical advice who has been legally committed to the institution."

33. That the clinical director at Northport in answer to a question as to the advisability of discharge of mental cases against medical advice responded, "The veterans' hospitals feel that, as long as they are not violent, there is no harm in letting them go against medical advice."

The clinical director, Lt. Col. H. E. Foster has submitted the following quoted signed statement regarding this allegation:

"He asked about discharges and the clinical clerk was requested to furnish the figures. He asked why so many were going against medical advice and I explained to him that many of the patients' families could see nothing wrong with their sons or brothers and if they did they felt that the patient would get along better and quicker at home. He was told that every relative was talked to and advised by me to allow their patient relative to remain here until examinations and treatments were completed. He was told of the excellent facilities we had here for treatment. He was advised that it was no unusual thing for relatives to come to the hospital with the patient and his Army attendants or to come the next day or so and demand their discharge. He was told that every new admission was interviewed and examined by the admitting officer or officer of the day—if after hours—the physician assigned to examine the veteran and present him to staff with recommendations and also by myself to determine their mental status, likelihood of self-destruction, suitability for the reception ward, need for immediate medical or psychiatric treatment, and their suitability for admission as a voluntary patient.

"The criteria for discharge against medical advice was explained to him, viz, that they would not be likely to harm themselves nor to injure others; and that if we feared either of these and the family refused to cooperate, we then sent them to Bellevue or Kings County Hospital for commitment under the mental hygiene laws of the State of New York. He was told that in every case of discharge against medical advice the reception officer, examiner, and I conferred prior to such discharge.

"We discussed the mental hygiene laws of New York—he, probably to learn if I knew anything about them—and he was advised that patients committed to our care were never discharged outright but granted a leave of absence or trial visit. The man is absolutely vicious in his misstatements regarding allowing 'legally committed patients who cannot leave of their own free will.'

"I categorically deny making any statement regarding any policy and emphasized our solicitude for them to remain till properly disposed of, as stated above, that they might receive proper care and keep their records clear with the Veterans' Administration."

34. That the first electro-shock instrument in the entire veterans' system was acquired only in October of 1942 and that it was not until late in 1943 that electro-shock was widely introduced into the veterans' mental hospitals.

There was a delay in the procurement of the first electric-shock machine for the research unit at Northport, where this therapy was first administered, because of priorities, and this element delayed the procurement of subsequent equipment for the other neuropsychiatric hospitals. Physicians were sent to Northport for training in this method in November 1942, and immediately steps were taken to introduce this therapy in other hospitals. This was accomplished as soon as equipment could be procured and physicians trained to administer it.

35. That at Northport he found electroshock administered by a single physician, Capt. Leon Rackow, whose duty it was to give the treatment to several hundred men every week; that Captain Rackow's main job was to care for the inmates of an entire building—225 patients—and that electro-shock was just a "sideline."

As to this allegation, there is quoted below the comment of Colonel Verdel:

"This also is a misstatement. At the time of Mr. Maisel's visit to this station we had two physicians assigned to electric-shock treatment, Captain Kashe and Captain Rackow, and we were only treating 25 patients with electric shock. At the present time we have 50 patients undergoing electric shock, and expect in the near future to increase this to 100. There are two physicians assigned to one building that is devoted entirely to electric-shock treatment. That part of the allegation which refers to the number of patients on Captain Rackow's ward is correct."

Physicians in veterans' hospitals, as in other large institutions have many and diversified duties to perform, in addition to their specialistic work. This will continue until more medical officers can be obtained, and even then many will perform various functions in accordance with the needs of the hospital concerned.

36. That at Lyons, N. J., electro-shock therapy was performed by Maj. M. Presberg who was also the roentgenologist of the hospital; that Major Presberg administered 20,579 electro-shock treatments in a single year and that "He 'treats' as many as 90 cases in a single morning—2 minutes per patient for this streamlined service."

This allegation is answered by Major Presberg, who has submitted the following statement:

"At 1:30 p. m. I was introduced to Mr. Maisel and directed to show him the electric shock therapy department. He asked me where I had received my training in the administration of electric shock and I replied that I had received it at the Veterans' Administration at Northport, L. I. When questioned as to the number of treatments we had administered at this facility, I told him we had given 20,579 up to that date (January 15, 1945), which was a period of approximately 13 months.

"Mr. Maisel was given a detailed explanation of the technique employed in this facility and I told him that on several occasions we had given as high as 90 treatments in one day. Because of the heavy load of

newly admitted patients and the great demand for beds, we have treated a great number of patients daily with very good results. In the explanation of the technique used, it was brought out how quickly electric shock can be administered. The time-consuming aspect of this form of therapy ensues only when the ward physician utilizes psychotherapy and reeducation of the patient. Anyone who implies that treating a large number of patients one right after the other with electric shock, is doing so incorrectly, does not know the most elementary principles of electric-shock therapy.

"While I was accompanying Mr. Maisel to War 1–C (infirmary ward) I informed him that I was also in charge of the X-ray department and would he like to see it. He declined."

37. That St. Elizabeths Hospital, "with the same Federal pay scales and far higher standards of service, operates at a cost of $2 per day per patient. The State of Wisconsin spends $1.48 per patient daily at its Mendota Hospital and $1.27 at its Winnebago hospital. Minnesota's progressive mental hospital system operates at costs varying from a low of 48 cents per patient per day to a high of 79 cents. New York State, in the highest-cost area in the country, manages to run its mental institutions at a daily cost per patient of 84 cents." That in contrast to the foregoing, "the Federal Treasury pays out, for every patient on the rolls of the Veterans' mental hospitals, $2.24 per day."

The information developed on State neuropsychiatric hospitals is not sufficient to make a complete comparison between State neuropsychiatric hospitals and Veterans' Administration neuropsychiatric hospitals. However, some information has been developed on State hospitals in California, Texas, North Carolina, New York, New Mexico, and Massachusetts. This is sufficient to prove that State hospitals are crowded the same as Veterans' Administration hospitals; that they have from two to three times as many patients per physician, six or seven times as many patients per nurse and more patients per attendant than the Veterans' Administration hospitals and that the food cost is approximately 33 percent below the food cost for Veterans' Administration hospitals. Also, that the ratio of dentists, technicians, and dietitians is much lower than that in Veterans' Administration hospitals.

The reports on hospitals in the State of Massachusetts, which is considered to be one of the more progressive States in the care of mental patients, indicates that on account of personnel shortages, the hospitals in this State are now only rendering custodial care.

Of course, it would be very unfair to compare State hospitals with Veterans' Administration hospitals, but it can be truly said that perhaps most State institutions at the present are merely maintaining mental patients and that the Veterans' Administration is treating them and giving them every reasonable opportunity to recover.

38. That by medical backwardness the Veterans' Mental Hospitals stand indicted as third-rate institutions and that "Only when it comes to expenses do they outdistance comparable Federal and State institutions."

I believe the two items in the operation of any psychiatric hospital which require the most money are salaries and food. In hospitals such as those operated by States, there are much simpler finance, supply, and plant maintenance procedures than is the case with the Veterans' Administration, which involve considerable expenditures and the State hospital menus are generally not at all comparable with ours. Then too, the Veterans' Administration has a much higher ratio generally, of physicians, nurses, dietitians, technicians, and attendants and these personnel cost money.

This statement made by Mr. Maisel is a complete misrepresentation of the true state of affairs insofar as State hospitals are concerned. Anyone who has had occasion to contrast the type of service given in most State hospitals and that given at our hospitals, will admit that there is no comparison.

39. That the Veterans' Administration claims it is building hospitals just as fast as it can; that nearly 20,000 more beds are supposed to be under way at the present time. "But those familiar with the record of the Veterans' Administration know that buildings for 498 new beds were to have been completed at Lyons last January—but won't be ready until June of this year, at the earliest."

The Veterans' Administration does not only claim it is building hospitals and additions to presently operated hospitals as fast as it can, but it claims this to be a fact. It also admits that the building program has not kept up with expectations or plans. The reasons for the delays in the completion of building projects include the question of priorities for materials, delays in deliveries of materials, strikes, manpower shortages, and certain unforeseeable structural difficulties. The program calls for over 20,000 additional beds to be made available before the end of the calendar year, 1946, of which nearly 8,000 will be ready for occupancy by July of this year; over 4,000 by January, 1946; 5,000 by July, 1946; and the remainder toward the end of the year, 1946. It is expected that this number of additional beds will meet the needs of the Veterans' Administration for psychotic patients for the period concerned.

The building program at Lyons has been delayed for several reasons, including a strike. One of the three new buildings should be ready for use by May 15 and the other two, several weeks later.

40. That because of overcrowding, hospital managers instead of pressing for a cure, encourage discharges at the earliest possible date because beds must be made available for new patients.

This allegation is entirely false and is not supported by any evidence other than the discredited word of Mr. Maisel. All recommendations for discharge from neuropsychiatric hospitals are made by the medical staff after due consideration of all angles of a given case. No patient is discharged until he has attained maximum benefit from hospital treatment unless he is discharged against medical advice.

41. That beating of patients has been "discontinued" at Lyons. But the men who did the beating haven't been fired. And "disturbed" veterans are still put into "seclusion" or "restraints." Worst of all, no one at the hospital seems to think there is anything wrong about all this.

It is believed that there is no longer any abuse of patients at Lyons. As a result of a recent survey it has been found that since the investigation in October 1944 a few instances of mild abuse were found concerning which appropriate action was taken. Following the investigation and based upon the evidence obtained, charges were preferred against one attendant resulting in his dismissal from the service, others against whom charges would have been preferred resigned before that action could be taken, three conscientious objectors were returned to their civilian public service camps and several others were reprimanded, admonished, or cautioned.

The evidence obtained on those in the latter group tended to indicate maltreatment of patients, but was not sufficient to warrant more drastic action. Charges were preferred against the chief of the acute service, most of which the charge committee failed to sustain. However, he was transferred to another station with a change of assignment. The supervisor of attendants is to be transferred where a suitable place can be found for him. Likewise, the chief medical officer is to be transferred in the near future. The ward surgeon on the acute service has been transferred to a general medical hospital. As a result of the investigation which showed that attendants had not been properly instructed as to their duties, instructions were issued to conduct an indoctrination course for all attendants. This course has been operating very successfully at Lyons for the past several months and it is felt that the cessation of abuse can be attributed in large measure to this indoctrination course. Further, a young, alert, and aggressive psychiatrist has been assigned at Lyons as clinical director and the acute service is now in charge of a capable psychiatrist.

Seclusion and other forms of restraint are employed only when indicated for the best interest of the patient concerned and then only on a physician's prescription.

42. That "one might cite a Detroit case—an honorably discharged, wounded veteran of Guadalcanal who broke into a store and stole $1,500 and a gun. That man was on the records of the Dearborn Veterans' Hospital, diagnosed as 'hysteria, shell shock, war neurosis.' But he was discharged uncured—supposedly 'harmless.' "

The manager of our facility at Dearborn, Mich., was requested to furnish a report on this case and a portion of his letter is quoted below:

"The author of the story undoubtedly had reference to the case of Mitchell E. Lodzinski, C–3,429,580, a World War II veteran who was disabled at Guadalcanal and subsequently discharged to his home in Hamtramck, Mich. This veteran in company with Arthur D. Davidowicz, also a World War II veteran who was disabled at Guadalcanal and later dishonorably discharged, were arrested for breaking and entering a Detroit saloon and taking cigarettes and a considerable sum of money. When the story concerning the arrest of the two veterans appeared in the Detroit Free Press, I immediately instructed our chief attorney to visit the Wayne County jail for the purpose of obtaining complete information in connection with the incident in order to determine whether the Veterans' Administration had fully discharged its responsibility and whether the facts in the case appeared to indicate the need for further action by such Administration. There is attached a thoroughly detailed report on both veterans as prepared by our chief attorney. There is also attached copy of report of neuropsychiatric examination in the case of Mitchell E. Lodzinski; also, copy of last rating showing a combined disability rating to a degree of 70 percent, for which the veteran is receiving pension in the amount of $80.50 per month.

"Since Arthur D. Davidowicz was dishonorably discharged from the military service, he is not entitled to any benefits from the Federal Government. The records fail to indicate that Mitchell E. Lodzinski was at any time a patient at this facility. However, on May 10, 1944, he submitted to a thorough examination including a neuropsychiatric examination in our out-patient service, and as a result of this examination his pension was increased from 50 to 70 percent.

"Because of the fact that both boys had been wounded at Guadalcanal the stories with reference to the arrest of both boys that appeared in the local newspaper created considerable sympathy and as a result an official of Camp Legion, a rehabilitation center which was established several months ago by Mr. Ford and located within a short distance from this facility, appealed to the authorities to dismiss the charges against both boys in order to give them an opportunity to rehabilitate themselves at Camp Legion. Since the

proprietor of the saloon and the local authorities were agreeable to such action, both boys enrolled at Camp Legion and it is my understanding that they are still there and are conducting themselves to the satisfaction of the authorities at Camp Legion."

The neuropsychiatrist who examined Mr. Lodzinski on May 10, 1944, made the diagnosis of psychoneurosis, hysteria, war neurosis, with inadequate industrial and social adjustment.

43. That "From Westchester County, N. Y., one might bring up the case of another World War II veteran charged with nine crimes within a single week. He, too, was an uncured mental case—but far from harmless."

This case cited by Mr. Maisel has not been identified. Doubtless many cases of this sort could be cited.

44. That every State in the Union could produce similar instances.

This is probably true.

45. That the Army is too large to "boycott the veterans' hospitals. Already, thousands of World War II veterans have been escorted to the doors of the nearest veterans' facility and discharged into these mental man traps. For these men—and for the tens of thousands who will follow them—there is no hope unless the veterans' hospitals are cleaned up—drastically, thoroughly, and promptly."

The author of this article in the Cosmopolitan has taken unfair advantage of this Administration, which is attempting to handle an unprecedented number of neuropsychiatric cases incident to the present war, in the face of serious personnel shortages, particularly in the specialist class and especially trained psychiatrists, nurses, qualified attendants, and technicians. He has decidedly overemphasized our weaknesses over which we have very little control, and has utterly ignored the splendid organization of our hospitals and their functions which have been developed since the last war. It is unfortunate, and, indeed, criminal, that such vicious denunciations, and in some instances sheer nonsense, can have such wide publicity. Certainly, in time of war it can do nothing but harm in its effect upon the morale of veterans, their families, and those in the armed services.

As to Mr. Maisel's recommendations contained in his article in the April Cosmopolitan, the following comments are submitted:

1. That "under our form of government, the means are available for a rapid and permanent cure of such a situation."

I believe I am in a position to assure you that the neuropsychiatric hospitals operated by the Veterans' Administration are emphatically not represented by Mr. Maisel. Being maintained as they are now with shortages of personnel, some subgrade personnel, and with an unprecedented admission rate, many problems naturally arise. However, the high standard of medical treatment has been held and our hospitals compare favorably with the best in the country.

2. That "The President can, by Executive order, place the running of these hospitals—as a wartime emergency measure—in capable hands. He can call upon the Surgeons General of the Army, the Navy, or the Public Health Service to act as temporary 'receivers' for these hospitals."

Inasmuch as our hosptals are solvent, no temporary "receivers" are indicated.

3. That "Congress, through its committees on veterans' legislation, can institute an immediate investigation of all the veterans' hospitals—to root out the incompetents, lay bare the failures and bring forth the advice of the best medical and administrative brains in the country."

An investigation of our hospitals is now being conducted by the House Committee on World War Veterans' Legislation.

4. That "immediately, without waiting for long-term reforms, the building program of the Veterans' Administration can be speeded up."

The building program of the Veterans' Administration is being speeded up insofar as is possible.

5. That "immediately, the overcrowding can be relieved by using resort hotels as hospitals—as the Army and Navy do."

The conversion of resort hotels as hospitals for neuropsychiatric cases would, in my opinion, require as much time as the building of new buildings.

6. That "immediately, bad food can be replaced by good food."

As to this recommendation, the Veterans' Administration has given much thought to the food service in its neuropsychiatric hospitals and takes great pride in the system which has been developed which embraces the various types of service applicable to the different patient groups. First of all, the best food obtainable is purchased and at all hospitals; it is prepared by experienced cooks under the supervision of competent dietitians. The ambulatory continued treatment type of patient take their meals in the general dining hall, being served by cafeteria or plate method, either of which assures hot food. Patients on the receiving ward, the acute service, and the general infirmary service are served in the same manner as those in the general dining hall, from electrically heated food carts which are loaded in the main kitchen. Bed patients, such as those under treatment on the tuberculosis service, the general medical service, and the most infirm group are served their meals on trays which are prepared in the main kitchen or in the diet kitchen on the ward and sent to the patients in electrically heated tray conveyors.

7. That "outmoded methods can be replaced by modern medicine."

Through liaison with the National Research Council which has brought together the leaders in clinical and research medicine for consultative advice to the Army and Navy, and through the valuable assistance rendered by the members of the Medical Advisory Council to the Administrator and Medical Director, those in the medical and hospital service of the Veterans' Administration have had the unique opportunity of being thoroughly informed in regard to the many new developments which the science of medicine has contributed. By these two particular means, I can assure you that the physicians throughout the Veterans' Administration are being kept thoroughly informed of the advances made in war medicine and rehabilitation and that new methods of diagnosis and treatment are instituted as their value is demonstrated.

8. That "callous, incompetent, or brutal employees can be replaced by top-notch men detailed from the armed services—which have already bailed out the hindsighted Veterans' Administration by the loan of more than 7,000 troops and hundreds of physicians."

Troops have been detailed by the War Department to over half of our neuropsychiatric hospitals to relieve the shortage of attendants and more are being assigned as the need arises.

9. That over a longer term, new and competent administrators can convert the veterans' hospitals into modern medical centers, attractive to the best of the medical profession.

The character of any hospital or medical center is primarily, if not wholly, dependent upon the calibre of the physicians who serve in such institutions. In our neuropsychiatric hospitals we have many excellently trained physicians and psychiatrists, but we also have others who are not so well trained and many, who, after the war, will likely leave the Veterans' Administration to enter private practice. Many of this latter group and the best of the recent graduates of grade A medical schools are of the type we want as permanent medical officers. However, unless some action is taken to create an independent medical service of some kind within the Veterans' Administration, which will be as attractive from every standpoint as the regular establishments in the Army, Navy, and Public Health Service, we cannot expect to obtain the type of young physicians so urgently needed, in any appreciable numbers. Perhaps the chief advantage of such an arrangement would be the privilege of the Veterans' Administration in selecting those who would constitute the service, the criteria of which would be second to no other Federal standards. In my opinion, now is the time to create such a permanent service, in order to attract physicians from the armed forces who are seeking a career with the Federal Government.

10. That "They can encourage research and postgraduate study. They can replace backwardness and brutality with the kind of medical treatment that Congress and the people have always intended our veterans to receive."

Regarding research in the Veterans' Administration, it is my understanding that consideration was being given before the war to the establishment of a research and teaching institute. Conditions which have arisen since have necessarily postponed such a project. As to postgraduate study for our physicians, many were assigned to special courses of instruction in a variety of specialties before the war but when personnel shortages began to be felt, such courses had to be discontinued. However, such postgraduate study for our physicians is now being resumed and as many medical officers as can be spared for such training are to be so assigned.

Welfare of the Indians

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I hereby insert a resolution which was adopted by the Senate of the State of New York on March 21, 1945, and concurred in without amendment by the assembly:

Whereas the State of New York throughout the entire period following its ratification of the Federal Constitution in 1789 has expended largely of its means for the welfare of the Indians within its borders by the establishment of schools and the employment of teachers therein, by the construction and maintenance of highways through the Indian reservations within the State, for the support of indigent Indians and the improvement of health and sanitary conditions among these people on their reservations, all without expense to the Indians or to the Federal Government; and

Whereas neither the Federal Government nor the Indian residents of reservations within the State of New York have formulated an adequate system of laws for the government, protection, and regulation of such reservations or for the regulation of relations

between Indians and other residents of the State; and

Whereas recent decisions of the Federal courts challenging the right of the State of New York to exercise jurisdiction over Indians within the State have endangered a successful continuance of the services being performed by the State and the creation of more harmonious relations between Indians and other citizens: Now, therefore, be it

Resolved (*if the senate concur*), That the Congress of the United States be, and it hereby is, respectfully memorialized and urgently requested to enact legislation declaring the Indians within the State of New York, whether residing within or without any of the reservations within such State, subject to the jurisdiction and laws of the State of New York in all respects excepting only those matters wherein jurisdiction has been or hereafter shall be expressly assumed by the Federal Government; and be it further

Resolved, That copies of the foregoing resolutions be transmitted by the secretary of state to the President of the United States Senate, the Speaker of the Federal House of Representatives, and to each Member of Congress from the State of New York.

By order of the assembly:

ANSLEY B. BORKOWSKI,
Clerk.

In senate, March 23, 1945.
Concurred in without amendment.
By order of the senate:

WILLIAM S. KING, *Clerk.*

H. R. 2536

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, from all over the State of North Dakota, which I represent at large, I am receiving almost continuous approval of what is commonly known as the Bulwinkle bill or H. R. 2536.

I have this day received from the North Dakota Stockmen's Association, a very important organization in our State, resolutions favorable to this bill.

Under unanimous consent to extend my remarks in the RECORD, I include herewith these resolutions:

DICKINSON, N. DAK., *May 19, 1945.*

The Interstate Commerce Commission in its report to Congress in 1944 recommended that rate-making processes of common carriers should be removed from the sphere of antitrust law prosecution and should be subject of adequate regulation by the Interstate Commerce Commission. This recommendation followed initiation of suits against the railroads for violation of the antitrust laws by the antitrust divisions of the Department of Justice. We have complete confidence in the manner in which the carriers have been regulated by the Interstate Commerce Commission and believe that the Transportation Act passed by Congress in 1920 should be amended to prevent any uncertainty as to which Government agency shall regulate the carriers. It is obvious that the railroads cannot follow the mandates of one Government agency if in doing so they make themselves liable to prosecution by another Government agency: Therefore be it

Resolved, That the North Dakota Stockmen's Association go on record as approving the principles of the Bulwinkle bill (H. R. 2536) now before Congress and that we respectfully request Congressmen LEMKE and ROBERTSON, and Senators LANGER and YOUNG to support this bill; and be it

Further resolved, That our secretary is hereby instructed to send copy of this resolution to said Congressmen and Senators from North Dakota, and also to Congressman LEA, chairman of Committee on Interstate and Foreign Commerce, before whose committee hearings on this bill will be held, and further request Mr. LEA to include this resolution in the record of testimony offered for the bill, it being impossible for this association to send a representative to testify personally at the hearing.

NORTH DAKOTA
STOCKMEN'S ASSOCIATION,
By J. C. EATON, *President.*
L. E. ARNDT, *Secretary.*

Writing on the Wall

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of June 3, 1945:

WRITING ON THE WALL

President Truman's factual survey of the United States plans for completion of the war rains upon the heads of the Japanese hammer blows no less devastating than those of our B–29's over Tokyo and Osaka. The President's message was given out in the form of a report to Congress and the American people. But it must have been primarily intended as a post-VE-day warning to the Japanese. Indeed, he told the Japs in direct and forceful language that only surrender can save their country from the kind of ruin which they have seen come to Germany as a result of continued, useless resistance.

Not for a moment did the President underestimate the magnitude of the task we are facing in the Far East. The Japs, he said, have more than 4,000,000 troops under arms, a force larger than the Germans managed to assemble on the Western Front. Still others are waiting to be called up. We have not yet met the main body of the Japanese army. Most of those we have met are fighting with fanatical zeal, although not always with intelligence. While the Japanese air force has suffered enormous losses, the area it must defend has shrunk drastically and given the enemy a density of air power four or five times as great as it was. This fact, coupled with the delirium of Japanese suicide attacks as our forces approach the home islands, makes it necessary to contemplate heavy American losses.

The point is that we can absorb all the losses essential to the winning of complete victory, painful though they will be. The Japanese, too, have the capacity to sustain great losses—their casualties are now running six times as great as ours—but their chance for victory, if they ever had one, long since disappeared. The end in sight for them can be only ruin if they persist in fighting to the last division. President Truman has now made plain that we shall fight them with an army of 7,000,000 men equipped as no other army in history has been. We shall throw into the battle air power that will dwarf even the mighty raids that have already leveled Tokyo. Japan's production facilities will be smashed. Her transportation will be paralyzed. There is no escape from this impending catastrophe for Japan, except surrender. All the President needed to do to hammer that point home was to outline actual battle plans now being put into effect in the Pacific.

Many Americans will doubtless feel that an army of 7,000,000 men is larger than necessary to bring the Japs to their knees. But the President is doubtless thinking in terms of maximum strength to end the war as quickly as possible. The war is still to be an all-out effort in the sense of using all the men and equipment that we can transport across the Pacific. That is sound policy even if the number of men who can be effectively employed is overemphasized at this time. It is well to let the Japs know from the very beginning of our great offensive the magnitude of the power to be used against them.

We still hope that this stepped-up offensive will be accompanied by a vigorous attack in the sphere of political warfare. President Truman again held out to the Japanese people the assurance that "we have no desire or intention to destroy or enslave" them. But he also repeated the vague demand for "unconditional surrender." We think that the price the Japanese must pay for their offense against humanity should be made much more definite than that. The winning powers should tell the Japanese in simple and positive terms what they must do to stop the slaughter of their people and the destruction of their homeland. Those terms must necessarily include, as we have previously noted, stripping Japan of her gains by conquest as well as complete demilitarization of that country. But millions of Japanese are likely to prefer these harsh terms to utter destruction. We should encourage them to throw off at the earliest possible moment the military rule that is leading them to their doom, and thus avoid paying a higher price than necessary for the kind of victory that is essential to future peace in the Pacific.

The Meaning of Lidice

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. STEFAN. Mr. Speaker, the word "Lidice" will always signify to all men everywhere the inexorable operation of eternal justice.

Lidice was a small Czechoslovakian town whose men were swiftly murdered, whose women and children were led away to the slow death of concentration camps, and whose buildings were leveled to the ground by a sudden manifestation of Nazi brutality.

The numerical loss of life in the destruction of Lidice was small in com-

parison to the depopulation of Poland. Other villages in Greece, in Yugoslavia, in France, and in Norway have been annihilated. It was not the magnitude of the crime against Lidice which aroused the wrath of every free people. This was a terrible slaughter of innocents, but innocents had been slain in wholesale lots elsewhere. We have had many betrayers of nations. Yet, they are all known by the name of one twentieth century Judas—Quisling. We have had many instances of the resistance of a few brave men against hordes of aggressors. We call them after the scene of one such battle—Bataan. As Quisling has become the symbol of treason, as Bataan has become the symbol of bravery, so Lidice has become the symbol of Czechoslovakia's resurrection as a nation.

Czechoslovaks—crushed to earth by their Nazi oppressor—have risen from their bondage. Heydrick, the hangman, is dead, executed by Czechoslovak patriots. Himmler, Heydrick's infamous master, is dead by his own hand. Daluege, who ordered the razing of Lidice, is a prisoner of the British. Justice is being meted out to Lidice's murderers.

It has been 3 years since, on June 10, 1942, a Nazi column roared into the peaceful Czechoslovak village. In those 3 years, Czechoslovakia has been liberated and Germany has been defeated. Events of world-shaking importance have transpired. Where, 3 years ago, we were fighting desperate rearguard actions against the victory-glutted Japanese in the Southwest Pacific, we are now disposing of the beaten remnants of the enemy on Okinawa—350 miles from Japan—and mounting ever-increasing aerial assaults against the Japanese home islands.

In the mids t of these changes, these achievements, the message of Lidice has not been forgotten. We still hear and heed the message of the martyred village. The basic righteousness of peaceful men cannot be destroyed. It will be reborn. It will rise again. The sheer evil of Nazi killers has brought down just retribution upon them. The sacred duty of this generation to posterity is to see that the forces responsible for the crime against Lidice shall not again terrorize the humble folk of nations now rededicated to the ideals of freedom.

The Auto Industry After the War—A Program Adopted by the International Executive Board of the UAW-CIO, April 20, 1945

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to submit a program and a plan adopted by the international executive board of the UAW-CIO on April 20, 1945. This UAW-CIO plan is known as the Thomas plan, and is named after R. J. Thomas, president of the UAW-CIO. It is a practical program for reconversion in the auto and aircraft industries, and I believe that it should be read and studied by every Member of Congress.

THE AUTO INDUSTRY AFTER THE WAR—A PROGRAM ADOPTED BY THE INTERNATIONAL EXECUTIVE BOARD OF THE UAW-CIO, APRIL 20, 1945

The workers and the machines of the auto and aircraft industries have been meeting the gigantic production assignments of war. By the time the war is over the 900,000 men and women employed in the plants of the automobile industry will have produced well over $30,000,000,000 worth of munitions. From the aircraft industry warplanes have been coming at a rate of 100,000 every 12 months—twice the 50,000-a-year goal which prompted the derision of the "experts" when it was first proposed by President Roosevelt.

There are now 2 auto workers for every 1 employed in 1940, and about 15 for every 1 on the pay rolls of the aircraft industry in that year. Government funds have served to double the productive plant and equipment of the auto industry and to multiply that of the aircraft industry many times over.

Our union, the UAW-CIO, has always held that to scrap this equipment and consign these workers to unemployment after the war would be unforgivable waste of the Nation's most precious resources. For us victory has never meant the return to so tragic a state of "normalcy." Defeat of the Axis on the world's battlefields must banish the prewar social insanity of idle men and rusting machines and ever-widening circles of human misery. It was in these conditions that the roots of fascism were planted; it will be from such conditions—if they are permitted to come again—that fascism can be resurrected even after shattering military defeat.

As Franklin Roosevelt said only a few weeks before his death, "Victory, without the use for abundance of the powers we have developed in production for war, would be, indeed, a hollow victory."

Such "use for abundance of the powers we have developed in production for war" is not now contemplated by major corporations of the automobile industry. In defense of this position a spokesman for one of these corporations has stated, "One of the most absurd of current fallacies is the idea that everyone has the right to a job."

Spokesmen for the industry do foresee a brief postwar boom—with production reaching a peak of 6,000,000 units per year, to be sold at 25 to 30 percent above 1942 prices. This is expected to last for no more than 2 years while we work off the replacement demand created by 4 years in which no passenger cars rolled off the industry's assembly lines.

When those easy pickings are over, the industry plans to beat a quick retreat to normalcy. Production is expected to fall back to the level of the late 1930's—between 3,500,000 and 4,500,000 cars and trucks per year.

This is a plain invitation to social and economic disaster. Such levels of production would allow for employment for little more than half the number of workers now on industry pay rolls.

Such normalcy would contribute at least one-half million jobless auto workers to the total of 18,000,000 unemployed which the United States Department of Commerce has prophesied will come if the Nation is allowed to sink back to its 1940 levels of production.

For the communities dependent on the auto industry and its workers this outlook spells defeat and disaster. Business, agriculture, and industries which prosper with high pay rolls would face paralysis from their recession.

JOBS FOR 1,000,000 AUTO WORKERS

We know the productive capacity of our industry. We have studied its possible postwar markets. It is our conviction that 5 years after the end of this war not 4,500,000 but 10,000,000 cars and trucks should be coming annually from the plants of our industry. And right now, as we take the first steps toward reconversion, our sights must be set on no lowe, goals. The whole process of reconversion should be geared to this—not to a relapse into unemployment, with men and machines thrown on the junk piles of industry.

At 10,000,000 units per year the industry would give employment to between 900,000 and 1,000,000 workers. This has been roughly the industry's wartime level of employment. It must become its peacetime employment if the need of the country and the world for motor transport is to be met, and if the industry is to shoulder its full share of 60,000,000 jobs in peacetime America.

No one can question that the manpower, the industrial skills, and the productive capacity for such output is on hand. Even in its best prewar years the industry never approached capacity operation. Conservatively estimated the prewar capacity of the industry was well above 6,000,000 units per year.

Since 1940 new machine tools and new plants have been built to the value of $1,100,000,000—a 100-percent increase. Some of this may not be immediately convertible to auto production. It may be difficult, for instance, to convert midwestern bomber plants to the production of coupes. But at least 80 percent of industry's new equipment—such as the grinders, the lathes, the milling machines, and the heat-treat furnaces—are direct additions to automotive-production capacity.

The mammoth new aircraft engine plant operated by the Chrysler Corp. could, by itself, more than meet the demand for auto and truck engines for the entire auto industry during a normal year.

To produce 10,000,000 units per year would require no expansion in basic productive capacity. Some work in reorganization would be needed and some planning to open up isolated bottlenecks in the supply lines of the industry. These would be no more than incidental measures required to mobilize for car production in the already existing power of the industry for the casting, forging, machining, stamping, and assembling of metal products. An industry which has turned out 26 percent of the Nation's vast war equipment can readily switch that productive power to the annual production of 10,000,000 cars and trucks. No one can seriously question that such capacity exists.

THE PROBLEM OF THE MARKET

When industry executives assume that capacity will not be used, they assume that the buying power of the average American will shrink back to approximately its prewar levels. They assume a return to the normalcy of economic insecurity and cancerous social misery. Their major premise is the inevitability of the narrow markets which stifled output during the 1920's.

In our planning for the postwar world we do not assume such conditions. Instead we are—along with the vast majority of the American people—fighting for the materialization of an opposing conception: that the purchasing power of the common man throughout the world will rise to new and unprecedented heights as a direct result of victory in the world struggle for humanity.

Nonagricultural wages and salaries of the American people are now running at over $100,000,000,000 per year, more than twice the prewar level. Savings have already been accumulated to the amount of $140,000,000,000. This means buying power beyond anything the Nation ever reached before.

We give our full support to the program of the National CIO, which proposes to maintain and extend this purchasing power against the threat of deflation when the load of Government war buying is lifted and full reconversion begins. We propose that this be done by a national program which will—

1. Maintain firm price controls through the reconversion period until such time as supplies of consumer goods match demand. Inflation must not be allowed to wipe out the buying power of the people's savings and income.

2. Carry through a speedy reconversion aimed at a 60,000,000 job economy. Speed in reconversion together with more adequate unemployment compensation and other social security benefits will avoid draining purchasing power away in change-over unemployment.

3. Adjust the Nation's tax program to protect mass purchasing power.

4. Bring immediate and substantial wage increases. If living costs are increased, or if there is a decline in weekly earnings for workers remaining employed during reconversion, the result will be a disastrous drop in wage and salary income. It is essential that wage increases be provided from industry's mounting profits in order to bring the equitable distribution of national income needed to make tens of millions of Americans good postwar customers for the products of American industry.

For the same reason farm income, too, must be protected against the threat of deflation.

5. Establish the annual wage in all industries. Stability of employment and income for American workers will mean stability of production, sales, and profits for industry and business throughout the country.

6. Give full Government support to needed public works. Projects such as the St. Lawrence waterway, program for improved roads, airport facilities, hospitals and schools must be prepared to meet reconversion unemployment and to counterbalance downward trends in the postwar business cycle. Such projects serve to create jobs in private industry and thus guarantee free enterprise the conditions under which it can achieve full employment.

7. Develop new industries. The aircraft industry has no more than scratched the surface of its postwar possibilities. Improved techniques and facilities will bring hundreds of thousands of additional jobs in aircraft manufacturing and transport services.

8. Carry through the United Nations' program of world political and economic cooperation. The tremendous markets of world reconstruction and development can be opened for us through the Bretton Woods and Dumbarton Oaks agreements. Only through such foreign trade can the production and savings created by a full employment economy be absorbed. This trade can be the margin between a drop into economic chaos and a steadily expanding prosperity.

9. Promote sound industrial relations. In their adherence to the recent labor-management charter, representatives of the majority group of American industrialists have shown their farsightedness. They know that full production and employment cannot be obtained by declarations of war upon labor and the institution of collective bargaining.

On the other hand, certain automobile industry executives have launched a campaign to repudiate the labor-management charter in the reckless hope of bringing about a peacetime industrial war aimed at bringing back the open shop. How well these reactionary employers understand the consequences of this is demonstrated by their sharp repudiation of the goal of postwar full employment. They know that full production and industrial civil war do not mix, and they prefer the latter.

The UAW-CIO seeks harmonious and peaceful relations with industry, as indispensable to the progress of the Nation. But we now serve notice that our full power will be mobilized for the defense of our union and the principles of collective bargaining if the actions of irresponsible employers make it necessary.

These are key national policies for 60,000,000 postwar jobs. They are policies in which the interests of labor, agriculture, business, and industry can find common ground. As the days of reconversion come ever nearer the people, as a whole, look to government for speedy and decisive action for this program.

INDUSTRY POSSIBILITIES

These broad national policies provide the framework within which the problems of our industry can find solution. In addition, specific responsibilities must be faced for the industry itself if it is to contribute its full share toward the Nation's postwar goals.

We propose the following:

1. A policy of price reductions rather than increases. It was by a low-price policy that the industry multiplied its production and employment levels many times over in the days of its most vigorous development. New home and foreign markets are yet to be tapped by renewed concentration on high-volume, low-cost production.

2. Disposal of Government-owned plant through policies geared into a program for 60,000,000 jobs and fully calculated to break down restrictive monopoly practices.

The UAW-CIO calls for the establishment of boards under the Surplus Property Administration, representative of labor, industry, and government, to explore postwar uses of Government-owned plants. No adequate study has yet been given UAW-CIO proposals that excess aircraft plants be used for the production of prefabricated housing and housing units. Such a study must be made.

3. Equal pay for equal work throughout the industry, to check the disruptive effect of wage competition among the areas and plants of the industry, so sharply accentuated by the present area bracket system of the National War Labor Board.

4. Rapid technological improvement in motor cars. The use of new materials and techniques should create new cars which will be safer, more efficient, and more economical than any before operated. Decreased fuel consumption is necessary if oil resources are not to be depleted within a short span of years. A revival of real competition in this area among auto manufacturers is essential. Existing governmental postwar guarantees against low profits should give ample leeway for full technological development by the small as well as the large producers of the industry.

5. Jobs for returning veterans in postwar industry with special compensation in accordance with the UAW's proposal for a 6-month veterans' bonus amounting to 20 percent of standard rates.

6. Establishment of an economic council, with the participation of labor and management, for the purpose of determining the facts regarding the economic problems of the auto industry and recommending policies based on such investigations which shall be in the interests of the industry and the Nation.

7. A special committee to be set up by the World Labor Conference to consider ways and means of meeting world demand for automotive transportation. From such deliberations may come proposals for expanding the market for automobiles through adjustments in the tariff, tax, and wage policies of various nations, and for working out international credit arrangements under the Bretton Woods agreement for the financing of such international purchases.

The purpose of such discussions shall be to assure an expanding market in which the United States will have its normal and necessary share. It must be recognized that maximum industrial development in foreign countries presents no threat of international competition, but rather the sound basis for world expansion of employment and the heightening of living standards.

Through the accomplishment of measures such as these the future of the auto industry and of the auto worker may be made secure. Our program is part of a national program for 60,000,000 jobs. We urge industry, Government, and the public to give it the most sincere consideration and the earliest possible enactment.

PRODUCTION SCHEDULES FOR 1,000,000 AUTO INDUSTRY JOBS

For some time our union has been studying the problem of postwar employment. We have been seeking to determine how the postwar auto industry is going to look. Our general conclusion is that the answer to that question will depend upon how fully the program of the UAW–CIO and the National CIO are carried into effect by the people and their elected representatives in government.

We have chosen to assume substantial success in this. On this basis we have sought to calculate postwar auto production. Behind these figures lies the assumption of a steadily expanding purchasing power at home and abroad. Behind them lies the assumption of a world at peace, with its peoples enjoying consistently higher levels of freedom and abundance.

These figures should be taken simply as estimates of what can reasonably be expected from the industry operating under conditions of full markets and full production to meet the human needs of those markets.

Domestic, foreign, and total production, cars and trucks, United States auto industry, 1946–50

[In millions]

Year	Domestic	Foreign	Total
1946	3.1	0.5	3.6
1947	6.4	1.2	7.6
1948	8.3	1.3	9.6
1949	8.5	1.5	10.0
1950	8.8	1.6	10.4

This total schedule assumes the defeat of Japan by the middle of 1946. With minor adjustments it could be fitted to an earlier or later date of victory. It assumes that even by 1947 some production or material supply problems will still hold the industry back from capacity production. By 1948 production will begin to match demand. Following 1950 the maintenance of this level of output will depend primarily on expansion of world demand; domestic demand could be expected to level off at that time.

(A) THE DOMESTIC MARKET FOR PASSENGER CARS

Domestic passenger cars to be produced, scrapped, and total registrations, 1946–50

[In millions]

Year	Produced	Scrapped	Registration
1946	2.0	1.5	23.0
1947	5.0	2.0	26.0
1948	6.8	3.5	29.3
1949	7.0	3.5	32.8
1950	7.2	3.6	36.4

We foresee an increase in passenger-car registrations from the level of 23,000,000 by the first of 1946 to a level of 36,400,000 in 1950. This is to be reached by annual car production rising from a level of 2,000,000 cars in 1946—while the industry is winding up its war-production job—to a total of 7,200,000 in 1950.

An estimated total of 36,400,000 passenger-car registrations by 1950 is by no means excessive The increase in population alone, assuming prewar income levels and no increase in the proportion of persons owning cars, would bring registrations from their 1941 total of 29,500,000 to 33,100,000 by 1950.

But the income of the average American has gone up sharply since 1941. In that year 38 percent of nonfarm families had incomes of less than $1,500 per year; 62 percent had more. In 1944 this proportion was halved; only 19 percent had less than $1,500 per year; 81 percent had more.

Millions of families have moved into income brackets which for the first time allow enough money left over, after the purchase of necessary food, shelter, and clothing, for the ownership of an automobile. Our present income—even after adjustment for increased living costs—is sufficient to allow for the ownership of about 40,000,000 passenger cars, if cars were now coming from the assembly lines of the automobile industry.

To assume that the Nation will not be able to own 36,000,000 cars in 1950 is to assume the inevitability of wholesale slashes in wages, salaries, and farm income. But this is not inevitable. On the contrary, it will happen only if there is bungling of the whole problem of economic and industrial reconversion.

(B) THE DOMESTIC MARKET FOR TRUCKS

Trucks produced for domestic market, 1946–50

[In millions]

Year:	*Trucks*
1946	1.1
1947	1.4
1948	1.5
1949	1.5
1950	1.6

Military vehicle and parts production is now running at a rate of $2,400,000,000 per year. This output is equal to the production of 2,500,000 civilian trucks per year.

Our schedules call for the production of only 1,600,000 trucks for domestic markets in 1950. This means an increase in truck output above prewar levels which will no more than match the increase in gross national product to be expected in a full employment economy.

(C) FOREIGN MARKETS FOR MOTOR VEHICLES

In the United States there is 1 motor vehicle for every 4.1 persons. For the rest of the world's population, some 2,000,000,000 human beings, there is 1 motor vehicle per 200 persons. Our country, with 6.5 percent of the world's population, has 74 percent of all motor vehicles.

To bring the rest of the world up to the level of American automobile ownership would skyrocket the number of vehicles operated outside the United States from today's 10,000,000 to a total of 480,000,000. The UAW-CIO counts on the accomplishment of no such Paul Bunyan task of world economic development within the immediate future. Giant needs for food and shelter must be met before hundreds of millions of the world's peoples can begin to aspire to ownership of a family car.

Our estimates have been made on a much more modest basis. We have assumed simply that foreign registration will increase in the five postwar years at their average rate for the years 1921–25, and that America would have the same share of that market that she held in those years. This would mean an increase in world registrations (exclusive of the United States of America) from 10,000,000 to over 25,000,000. And this in turn would mean the production in that 5-year period by our own factories and workers of over 6,000,000 cars.

To assume any lower level of motor exports is to assume that the whole program of the United Nations for peaceful world economic development is so much international pie in the sky. We know the needs of the world peoples for the products of American industry. Since we are confident of the sincerity of those who framed the Bretton Woods agreement, we believe that the machinery for financing substantial American exports to meet those needs is being set up. It will work to smash the barriers which stifled foreign trade in the years before the war.

In fact, our forecast of foreign demand may be open to attack as an underestimate. Certainly, the pace of world development to be expected after the rooting out of the Nazi infection should be far more rapid and far more certain than that of the years after 1921. Historically, the establishment of political freedom for the common man has always opened the way for tremendous new advances in his economic activity and in his living standards. The world victory over dictatorships with their programs of worse than medieval misery for common people everywhere must be and will be reflected in new high tides of world economic activity. In this, American agriculture and industry are bound to have a full share. Foreign trade will directly increase the export markets for the products of auto workers. In addition, such trade will serve to increase the wage and income level of millions of American workers, farmers, and businessmen. The American makers of machine tools, of railroad equipment, of the thousand-and-one items needed for the rebuilding and development of the world also will be customers of the American automobile industry.

SPECIAL AIRCRAFT PROBLEMS

In 1940 the American aircraft industry employed 100,000 workers. Today 1,500,000 men and women are at work producing the war planes that have cleared the Axis from the skies of the world.

In no other industry except shipbuilding has there been such enormous expansion. In few others will there be greater danger of shattering peacetime deflation.

Estimates of postwar aircraft employment range from 100,000 jobs estimated by some to the 400,000 jobs in the industry prophesied by Secretary of Commerce Wallace. At the best there will be hundreds of thousands of jobless workers and there will be large-scale migration of workers in search of employment in other industries.

About 450,000 workers in the aircraft industry are now employed in plants operated by automobile companies. For them, our proposals for employment of 1,000,000 workers in the automobile industry will answer the problem of jobs. Others among the remaining aircraft group—the very old or young and 15 to 20 percent of the women—may not choose to work after the war. But this departing group is scarcely as large as the group of servicemen formerly employed in the aircraft industry who will be seeking reemployment after demobilization.

For at least 500,000 aircraft workers postwar jobs depend on the execution of the general CIO program which we have already outlined. If industry expands its general operation, if large-scale housing and other programs are inaugurated, if Government acts to meet the needs of servicemen and workers by increased unemployment compensation and other reconversion benefits, then the bread-and-butter problems of this critical group of workers can be solved.

The UAW-CIO is by no means content to accept the goal of 400,000 aircraft workers as the full measure of the peacetime possibilities of the aircraft industry. We favor action along the following lines:

1. Full development of air freight and passenger service for America and for the world. Costs for such service could be cut to a fraction of the present levels, and traffic thus multiplied many times over. Assuming volume operations with new planes, air-freight rates could be cut to one-third of present levels.

2. Extensive building of airports and airport facilities.

3. Intensified research with the help of Government for the development of a light "flivver" plane, which could be safe, cheap, and efficient, for the development of mass aircraft sales.

4. Develoment of large-scale training programs for civilian aviators.

5. Conversion of surplus aircraft plants. The Office of War Mobilization and Reconversion should establish immediately, in conjunction with its advisory committees, a committee of competent engineers and experts whose responsibility it would be to survey the surplus aircraft facilities which would be available after VE- and VJ-day, with the view to ascertaining the degree to which these facilities can be converted to the manufacture of other products and the extent of unemployment which will accrue. Competent authorities have already indicated that existing aircraft assembly plants could readily be converted to the manufacture of prefabricated low-cost housing units. Such a program alone could easily reabsorb a minimum of 500,000 displaced aircraft workers. Likewise, the much-needed modernization of our railway rolling stock—a large portion of which now in use is more than 25 years old—offers great possibility for the use of surplus aircraft plants. Assembly plants and even subassembly plants manufacturing wings and fuselages are ideally suited to the manufacture of cheap coaches and freight cars, making employment opportunities for at least an additional 200,000 aircraft workers.

These are but a few examples of peacetime uses for surplus aircraft plants. The UAW-CIO is certain that a committee of experts recruited from industry, labor and Government can locate a host of others. These plants, built at great public expense, have been symbols of American war-time industrial supremacy that must not become industrial ghosts which haunt an America of unemployed veterans and war workers in postwar America. These vast tools of defense must become tools of plenty for America and a world deserving a richer and fuller future.

RECONVERSION

Since February of 1942 no passenger cars have been produced in America. The complex industrial networks which channeled the flow of parts and subassemblies through the thousand or more plants of the industry to steadily moving final assembly lines, have been totally broken. An industry organized for the production of one basic product has been reorganized to the production of thousands of weapons of war, ranging from B–29 or B–32 bombers to precision parts for radar equipment.

After Pearl Harbor the limitless needs of war swept aside all industry resistance and brought speedy success to the job of conversion.

Now the sweep of allied armies through Germany brings VE-day ever closer and with it the time of reconversion for at least one-half of the auto industry.

Already the strategic bombing of Germany has been ended. UAW members employed in production of B–24 or B–17 strategic bombers have been warned of lay-offs only a few days or weeks ahead. Jobs for 100,000 workers in the Detroit area are to be ended with the termination of B–24 production at the Ford Willow Run plant. Thousands of aircraft engine workers in Chicago and Flint are to be laid off in the fourth week of April.

Announcements of cut-backs in tank and other munitions programs are expected within the next few days.

Will the Nation's need for speedy reconversion of our industry be met with at least the decision and dispatch of the original conversion to war? Can one portion of the industry be changed over to civilian production while the other half continues to turn out weapons for final victory in the war against Japan?

These are the problems which can be fully solved only by the closest cooperation of labor, industry, and Government, including the procurement agencies of the armed forces. We of the UAW-CIO early recognized this need for close and detailed planning in meeting the problems of reconverting the auto industry, and proposed last fall that an Industry Council on Reconversion be established. This council is more urgently needed now than ever before, for now we are immediately confronted with the deflationary menace of large scale reconversion unemployment. Failure to meet this threat can only be at the expense of the Nation's goal of 60,000,000 postwar jobs. To allow it to develop will in addition create sharp dislocations bringing into peril the satisfactory conduct of the war itself. Resolute and effective action on the other hand will be a guarantee that Government and industry are preparing sure foundations to a postwar world of full production, with expanding abundance to all the people.

Such action must move along two main lines: (1) The physical process of reconversion must be speeded to the utmost; (2) the economic blow of reconversion unemployment must not be allowed to fall with shattering force on the hundreds of thousands of workers who have made the industry's war production possible.

SPEED RECONVERSION

Months ago the UAW-CIO outlined measures required to prepare the ground for a speedy reconversion of the auto industry. Our proposals included:

1. Immediate construction of the minimum number of machine tools necessary for getting out automobile production at the anticipated level of 2,000,000 cars a year.

2. Authorization for the use of manpower and materials for required engineering, designing, and tooling work to prepare for reconversion wherever such authorization could be given without interference with the war production effort.

3. Sale or lease to industry with the minimum delay of Government-owned machine tools not needed for post VE-day war production, but essential to civilian passenger car output.

4. A system of continuing priority and production controls to avoid interference with continuing war work and to protect civilian production against all avoidable bottlenecks.

Partial measures along the lines of this program have been taken by the War Production Board. The need for action has been thus recognized by Government. But too frequently steps actually taken have been too little and too late. Certainly the conviction expressed by the former Director of the Office of War Mobilization and Reconversion that post VE-day unemployment would be insignificant can be described as far more complacent than accurate. It at least assumes the prevention of measures which as yet hardly appear to have been conceived.

About 35 percent of the workers in critical machine tool shops have been at work on production jobs, which would have been assigned to thousands of metal working plants throughout the country. Even now with reconversion unemployment looming no more than a few weeks away, reassignment of this production load to clear the decks for production of crucially important machine tools has not been announced.

Policies for the disposal of excess plants and equipment have not yet been clearly outlined; management has not been able to learn what plants and what machines may be made available—or when. Agencies responsible under the George act for doing this job have been working, so timidly—if conscientiously—and on such minor issues that a major disaster of unemployment is being recklessly courted.

No action has been taken on our suggestion that skilled labor required for the industry's reconversion job be pooled. Such pooling would guarantee the industry against situations in which skilled workers may be idle in one plant while critical retooling work in the plant next door is held back because of a shortage of skilled labor.

Neither labor, management, nor the civilian agencies of Government have told exactly what plants will no longer be needed for war production after VE-day. The general principle of concentrating remaining war work in Government-owned plants has been adopted, but no specific schedule of cut-backs in any shape or form has yet been made available. As a result no one knows what parts plants, for example, will be freed of war assignments in time to meet orders from final assembly plants. Major plants in the industry may be prepared to start their assembly lines rolling only to find that supplies of critical parts—anything from transmission assemblies to spark plugs—cannot be provided. The apparent assumption of some high officials that the total effect of haphazard VE-day cut-backs will be sufficient to open industries' supply lines is an evidence of hope rather than knowledge. Trusting to chance can be no substitute for the planning and control needed to clear such channels for the flow of supplies and subassemblies.

We in the UAW–CIO offer our full cooperation to industry and Government in support of all steps which may now be taken to overcome these initial weaknesses in planning for reconversion. We are convinced that even half-way success in such a program will materially reduce the long months of unemployment which now seem to threaten the workers of our industries.

Reconversion in 6 weeks rather than 6 months after VE-day should be the goal. And this goal can be reached.

PROTECTION FOR WORKERS' LIVING STANDARDS

Whatever may be the success of reconversion planning a certain amount of unemployment for workers must now definitely be expected. Workers will be laid off, their buying power will be cut, their savings consumed, or their living standards dangerously cut. Take-home pay for the employee faces sharp reduction. The full extent of this deflationary sag in such communities as Detroit, Cleveland, Chicago, and Los Angeles has not yet been revealed. The Chairman of the War Production Board has announced cut-backs for the entire war program including food and clothing for the troops, to the amount of 12 percent in the first quarter after VE-day. Obviously in the munitions industries themselves the cuts will go far deeper. Indeed, unofficial estimates have placed them at 50 percent of present levels.

Serious unemployment is, therefore, a certainty for the months ahead.

The paralyzing economic effects of this can be and must be offset by planning now. This is the need not only of UAW–CIO members but of our country as a whole. The Nation cannot look forward to a peace of full production and full employment which is built on the impoverishment of workers or servicemen or farmers.

To meet this danger from reconversion unemployment the UAW offers the following economic program:

1. Wage policies of the National War Labor Board must be shifted at once from fighting the bogeyman of the inflationary gap to meeting the rising and very real menace of the deflationary gap.

Take-home pay must be maintained by wage increases as working hours are cut. Employers must be prohibited from shifting rates downward as jobs are shifted from war to peace.

The wage-bracket system must be abolished in favor of the principle of equal pay for equal work.

2. Government and industry must give laid-off workers full assistance in securing new employment.

Some critical labor-shortage areas may be expected to exist even after VE-day. Government and industry should join to meet the expenses of moving unemployed workers to areas where their skills are needed. Transportation expenses of migratory war workers who choose to return home should likewise be met.

Training centers to fit workers for peacetime occupations should be set up at once, and should be made available to those whose unemployment is due to reconversion.

3. Unemployment compensation benefits must be increased. Even before the war the average benefit payment was totally inadequate to maintain the worker and his family at a decent minimum level. Now with steep increases in the cost of living the buying power of benefits has shrunk severely.

The UAW-CIO continues to give full support to the proposals on unemployment compensation advanced in the last session of Congress by the Kilgore bill. Industry has been guaranteed through the generous provisions of the Revenue Act against financial loss or reduced profits; for labor there must be at least the assurance of essential living standards.

In addition the legislatures of the various States cannot shirk their immediate responsibility for increasing benefit rates and ending the wholesale disqualifications which have been denying benefits to great masses of war workers.

More adequate old-age protection should be given with benefits available to lower age levels.

4. The drive to break OPA price ceilings must be defeated. Unemployed workers and their families must not be allowed to become victims of unscrupulous profiteering. The Nation's system of price control must be strengthened rather than relaxed in the months ahead.

5. Programing and planning for needed public works must be started without delay. We call upon city governments to arrange immediate conferences with officials of State and National Governments to work out details for such projects. The blueprinting and the paper work must be done now if we are not to be overwhelmed by the crisis of reconversion unemployment which is now developing.

Every measure must be taken to stimulate public and private construction once materials again become available.

Finally, we call upon President Truman to exercise the full powers of his high office for the protection of American workers and the communities dependent upon them. We propose that he summon together in conference for this purpose representatives of labor and industry together with the directors of the Office of War Mobilization and Reconversion, the Office of Economic Stabilization, the Office of Price Administration, and the Chairman of the National War Labor Board. Through the realistic facing of the issues by such a group and the same determination of a common program the crisis threatening workers and the people may be overcome. This is the course of action now required in preparation for an America of peace and prosperity in the future.

A Soldier's Prayer

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. SPRINGER. Mr. Speaker, on Monday evening, April 30, 1945, Mr. T. M. Sample, of New Palestine, Ind., who is almost 90 years of age and whose eyesight has almost completely failed, wrote a poem entitled "A Soldier's Prayer," which has since been presented to a number of luncheon clubs and other groups. This grand man of the Tenth Congressional District continues his activities in life regardless of age or infirmities. He writes his own letters, poems, and articles upon the typewriter—he having memorized the keyboard and he retains in his memory the location of each letter and figure thereon. I wish to commend and compliment this fine American citizen upon his thought, his great ability, and his never failing effort to go forward as one who expresses his desire for peace when this war is over. I congratulate Mr. Sample upon his energy and effort for our future, and I am happy to place his poem in the CONGRESSIONAL RECORD that all may read it.

Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include the poem written by Mr. Sample, entitled "A Soldier's Prayer," which follows:

A SOLDIER'S PRAYER

After this war is over and we boys get back home,
None wants to be a rover or over earth to roam,
Home never seemed so dear: at home we long to be;
When we get out of here, our homes we wish to see.
It's there our loved ones wait, and pray for us and yearn
To greet us at the gate with joy, when we return.
We'll settle down by firesides, hear not the guns dread roar;
See not the awful fratricides, nor battles crimson gore.
How happy we shall be, the doors of hope ajar,
Where all are safe and free, and there is no more war.
Lord, give us peace; sweet peace, a peace that comes to stay,
Where wars forever cease, for lasting peace we pray.

Hawaii's Gross Income Tax

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following clipping from the Christian Science Monitor under date of April 9, 1945:

HAWAII FINDS GROSS INCOME TAX PRODUCES

HONOLULU, April 9.—Hawaii's gross income tax is rounding out a 10-year period of almost spectacular performance as a revenue-producing measure, having been largely responsible for building the Territory's finances up from $1,000,000 deficit in 1935 to a surplus which will approximate $20,000,000 at the end of the current fiscal year, June 30.

The steady and increasing flow of revenue from this tax has been the chief source of support, enabling the Territory to maintain a balanced budget and to retain a sound, financial position despite steadily increasing costs of government.

Because of the accumulation of substantial reserves in the general fund, Hawaii has been able to withstand the strain of emergency appropriations and unexpected expenses, resulting from wartime conditions. Dependence on Federal assistance for such wartime needs as air-raid shelters, civilian-defense organization and equipment, temporary housing and food and rent controls has been proportionately lessened.

GOOD PERFORMANCE

Dependable performance has silenced most of the critics and skeptics who represented a strong minority both in the legislature and in the business community when the measure was added to the statutes. There is now in Hawaii almost unanimous acceptance of this principle of taxation—a gross tax on all forms of business.

It would be distorting the financial picture, however, to give the gross income tax exclusive credit for the currently prosperous condition of Hawaii's treasury. Substantial income has been derived from other taxes, including the new 2-percent withholding tax on compensation and dividends and real property and personal property taxes. But in the past 10 years, the gross income tax has consistently produced a greater percentage of revenue than any other levy and now is commonly referred to as the budget-balancing tax.

When the 1935 territorial legislature convened, Hawaii faced a deficit of approximately $1,000,000. Salaries and wages of all Government employees had been cut 10 percent and automatic salary increases provided by law had been suspended. Expenditures in all departments had been curtailed to such an extent that governmental activities were not functioning properly.

TAX PLAN STUDIED

To cope with this situation, Joseph B. Poindexter, then Governor of Hawaii, appointed an advisory committee on taxation. This committee, after a year of tax study, recommended the gross income tax. Upon the Governor's endorsement of this recommendation and despite considerable opposition from a minority of legislators and business leaders, the gross income-tax law added to the territorial statutes.

At the end of the 1935 to 1937 biennium, after the gross income tax had been in effect a year and a half, the Territory had not only wiped out the $1,000,000 deficit, but had closed its accounts with a surplus of more than $1,300,000 after restoring salary cuts and lifting the suspension on automatic salary increases.

Since then, due to the steady increase in the tax base, or the gross business on which the tax is collected, revenues from this source have mounted steadily.

Performance would not have been so spectacular, however, if the adoption of this form of taxation had not coincided with the start of a 10-year boom resulting from prewar and wartime activities which inflated Hawaii's prosperity out of all normal proportions, trebling retail sales and the other principal business activities from which the gross income-tax moneys are derived.

PRIVILEGE TAX

As applied in Hawaii, the gross income measure exacts a tax from each person or entity in business. It is a privilege tax measured by gross income. The subject of the tax is the business activity, whether it be Hawaii's largest sugar and pineapple industries or a part-time piano teacher who may gross no more than a few dollars a month.

Business, as defined in the act, includes all activities—personal, professional, or corporate—engaged in with the object of economic gain, direct or indirect. Gross income is construed to mean gross receipts without any deductions for costs, taxes, or other expenses.

Salaries or wages for services rendered by an employee to an employer are not covered by this tax, but are subject to the new 2 percent withholding tax recently effective in Hawaii.

The gross income-tax law establishes various rates for business activities from a minimum of one-fourth of 1 percent for producing, wholesaling, and manufacturing, to a maximum of 2 percent for such activities as retailing, sugar processing, and pineapple canning.

RATES ARE FLEXIBLE

Rates are flexible, permitting the Territorial Treasurer, working in conjunction with the Director of the Budget—and upon the written approval of the Governor—to decrease or increase the rates within set limits to offset requirements of Territorial expenditures. Increase of rates may not exceed one-fourth of 1 percent at a time, and the maximum is set at 2 percent.

In 1936, the first complete fiscal year the tax was in operation, the gross income levy produced $3,550,538 from a tax base of $353,697,498. In 1944 the tax base, the gross receipts from all forms of business and other activities to which the tax is applied, amounted to $946,783,466, and the tax added $10,276,471 to Territorial revenues, representing 26 percent of all tax moneys collected in the Territory.

Hawaii's experience with this form of taxation has attracted wide attention in the mainland United States. In nearly every mail William Borthwick, Territorial Tax Commissioner, receives inquiries from various individuals or groups interested in tax problems and wanting to know how the gross income is working out in Hawaii.

ATTRACTS ATTENTION

Although similar taxes are in effect in 26 States, including West Virginia, whose tax law served as a model for the Territory, the

Hawaii law probably has attracted more attention because it has been applied in a period of rising prosperity which possibly has not been paralleled in all of the mainland localities where similar taxes are in effect. Hawaii's experience gained additional publicity through Dr. Francis E. Townsend, who made a personal visit in Hawaii to determine whether this form of levy could be used to finance his old age revolving pension plan.

More recently, the Territorial Tax Office has been in communication with Paul Chase of Syracuse, N. Y., in connection with Mr. Chase's advocacy of a gross income tax on a Federal scale. Mr. Borthwick is convinced that on the basis of Hawaii's experience, the gross income measure could and should be used by the Federal Government as a revenue-producing tax instead of the net-income principle.

Mr. Borthwick regards the gross income law as having many advantages from the tax collector's standpoint. Requiring returns on a monthly basis, it provides frequent contact between the taxpayers and the tax office, and also spreads the flow of income evenly throughout the year.

Army Point System

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks I wish to state that much has been said pro and con as to the merits of the discharge point system announced by the Army. No doubt, from time to time, the Army will perfect this system to iron out inequities. It is my personal opinion that a combat soldier under the system is not given enough points for actual combat service. In this connection I am inserting a letter from a fine boy who has had long service in Italy, to his mother, who resides in my district in South Carolina. This mother has three other sons in the European theater, and naturally she is very much concerned that her fighting boys be given a fair break for actual combat service:

APRIL 1945.

DEAR MOTHER: Yesterday I figured out my points, and I have 73. You are supposed to have 85 points before you can get a discharge. Well, I wish some of the big shots back in the States could hear what the old men who have been doing all of the fighting think of the system. They haven't been given any consideration at all for the fighting that they have been doing. The only thing mentioned about combat time is that they are given five points for each battle star. Well, the catch in that is that the men in the rear who have never seen the front line are given battle stars and in most cases they have more battle stars than the front-line soldier. The reason why they have more battle stars is that they are never in the danger zone. The front-line soldier doesn't live long enough to get that many battle stars. When I was having some dental work done at the hospital, my dentist told me that he had four battle stars and that he thought he was going home. Well, he has been stationed over one hundred miles in the rear. The old men who came over with this company only have three battle stars. We have had between six and seven hundred men to pass through this company since we first went into combat. Now we have about thirty old men left who started off with this company, and I don't think that it would be fair to send these men back into combat. Most of the old men have been wounded once or twice and they have had just about all that they can take. It is almost impossible for a combat soldier to live long enough to gain the required amount of points to be eligible for a discharge and this is why we think the system is very unfair. There are about 40 men in the rear for each man on the front line. If the old men are needed in the South Pacific, I think they should be given the jobs in the rear, and let those men in the rear who have never been in combat come up and take our place. Well, I guess the majority will rule again, and they are the ones who have never seen any combat. It is a funny thing how the press can lead the public around, and make them believe most anything. Maybe I had better stop on this subject before I say too much. There is a lot more that I could tell that wouldn't sound so good, and no one would be able to understand or believe unless he had been here.

Affectionately,
Your son,

TOM.

The Flag of All Nations

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include a very beautiful poem, The Flag of All Nations, by Miss Hallie McMillan, of Charlotte, N. C. Miss McMillan is an accomplished poet, musician, and artist. She is an active member of the Alumnae Limestone Association of Limestone College, Gaffney, S. C. It has been proposed by civic organizations and prominent individuals that this poem be adopted as the universal peace hymn.

It is with great pleasure that I call the merits of this composition to the attention of the Congress:

FLAG OF ALL NATIONS

(By Hallie McMillan)

Flag of all nations, wave on through the night.
Thy royal sphere banner with power and might,
Wherever thou wavest, wave peace to thy world,
O'er thy United Nations, forever unfurl.
Wave truth to every nation, thy strength in unity,
Symbol of peace and justice,
Thou flag of victory.
Flag of all nations, float on day by day.
Thy emblem of freedom unfold thou our way.
Thy bright stars will guide thee wherever thou be,
O'er every global boundary o'er air, land, and sea
Peace reigns, o'er thy horizons glory in liberty,
For worlds of our tomorrow.
Triumphant victory.

Who Writes the Trade Agreements?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. REED of New York. Mr. Speaker, the astounding disclosure which has just been made by the FBI that certain officials of the State Department have been disclosing the secrets of that Department to foreign nations brings up a very important point with reference to the trade agreements.

There has been an effort, through propaganda paid for by the taxpayers, to lead the citizens of this country to believe that they could more safely trust their affairs to the State Department bureaucracy than to the duly elected Members of Congress.

Internationalists have been delegated power to write trade agreements, under the terms of which pay rolls in this country can be destroyed, agriculture deprived of its domestic market, industry stifled, if not ruined, which is too much power to place in the hands of a group of international-minded functionaries.

Under leave to extend, I include an article from the Washington Daily News under date of Thursday, June 7, 1945, relating to this deplorable situation, now existing in the State Department:

TOP UNITED STATES SECRETS OPEN TO COMMIES—UNITED STATES AIDES' ARREST BARES RED TIE-UP

(By Frederick Woltman)

NEW YORK, June 7.—With the FBI arrest of two State Department officials, a Naval Intelligence officer and three private citizens on charges of espionage, the Scripps-Howard newspapers today reveal that through Philip J. Jaffe, the ringleader, the American Communist movement had access to "high confidential documents," some of "top secret" importance, in six Government wartime departments or agencies. They included the Departments of War, Navy, State, and the Office of Strategic Services.

Jaffe, who according to FBI Director Hoover received the data stolen from secret Government files, has been for more than 10 years a leader and heavy financial supporter of Communist propaganda causes.

RICH BUT RED

Although a wealthy businessman, Jaffe is a Communist and teaches at the Jefferson School of Social Science, official school of the Communist Political Association.

In 1934, at the request of Earl Browder, he took charge of the American Friends of the Chinese People, a Communist front. Under the alias of J. W. Phillips he became its executive secretary, financial angel, and editor of its publication, China Today.

So seriously did the Government regard the series of thefts that Acting Secretary of State Grew took the unprecedented step last night of issuing a statement in connection with the arrests. He said they followed a thorough investigation in which the State, Navy, and Justice Departments "for the past 2½ months * * * have been working together to determine how the official secret data was obtained."

Arrested last night along with Jaffe, now editor of Amerasia, were his coeditors, Kate L. Mitchell, writer and Bryn Mawr graduate, and Mark Gayn, a writer for Collier's and other national magazines.

THREE ARRESTED HERE

Also arrested were Navy Lt. Andrew Roth, formerly Jaffe's research associate on Amerasia; Emmanuel Sigurd Larsen, specialist in the China Division of the State Department's Office of Far Eastern Affairs, and John Stewart Service, State Department foreign service officer returned recently from China.

(High-placed Government officials hinted in Washington today that the six arrests comprised one of "a whole series" of cases involving illicit use of confidential Government information. One official said the Government was digging into "a good many" similar incidents.)

Larsen, Service, and Roth were arrested in Washington last night, charged with conspiring to obtain, possess, or transmit information affecting the national defense. The other three, arraigned here on the same charge, were released on $10,000 bonds.

Gayn, United States Attorney John F. X. McGohey said, "was apparently preparing to flee the country," evidently intending to reach the Orient through Russia and India.

GREETING CARD MAGNATE

Mr. Hoover said that most of the stolen documents, both copies and originals, were turned over to Jaffe. FBI agents discovered data taken from OWI and the FCC as well as the four other bureaus.

Some of the information, according to Mr. Hoover, appeared in Amerasia. An article by Gayn, Terror in Japan, will appear in this week's Collier's, which was in print before the arrests were made.

Jaffe is president of Wallace Brown, Inc., a greeting card manufacturing firm. His contribution to the Communist cause is known to exceed $5,000 annually.

Among his other activities Jaffe is a member of the board of directors of the National Council of American-Soviet Friendship, Inc., the leading pro-Soviet propaganda organization in this country. On May 21 the Scripps-Howard newspapers disclosed that this council, which operates with an imposing list of sponsors, spearheaded a national pressure campaign against the current best seller, Report on the Russians, by W. L. White.

Jaffe was a founder of the American-Soviet Friendship Council, originally named the American Council on Soviet Relations. He served as its national director when it conducted a Nation-wide campaign "for the purpose of making contacts, organizing local councils, and speaking" in many cities to spread the message of what the council called Russia's "achievement in the building of a Socialist state."

PAL OF LAMONT

Jaffe's close associate and national chairman of the council under both its names was Corl'.s Lamont, foremost United States apologist for the Soviet system.

An even closer associate of Jaffe over the last 11 years has been Frederick Vanderbilt Field, wealthy backer of the Communists and now columnist on their tabloid, the Daily Worker. In October 1935, Field spoke at a banquet given by China Today. Jaffe was chairman of the banquet as J. W. Phillips. The featured speaker was Earl Browder.

While still editor of China Today, Jaffe in 1937 founded Amerasia, along with Field, as managing editor and chairman of the editorial board respectively.

During their coeditorship of Amerasia Field found time for other activities. In the period of the Hitler-Stalin nonaggression pact Amerasia's chairman headed the American Peace Mobilization as executive secretary.

The Justice Department has since characterized the American Peace Mobilization as a front formed "under the auspices of the Communist Party" to discredit "lend-lease and the entire national-defense program."

PICKETED WHITE HOUSE

Field, according to the Department, directed a continuous picket line at the White House against what Field called America's march toward fascism.

Jaffe was busy too. He saw to it that both Amerasia and China Today hewed to the Communist Party line. For example, when Amerasia found occasion to mention the European war it politely referred to Hitler's side as the Germans and not the Nazis.

And when France had fallen and Britain faced her darkest crisis, Jaffe wrote in the November 1940, issue of Amerasia:

"The war in Europe is between Great Britain, the greatest imperial power in the world, and a country which is ambitious to replace Great Britain in that role. * * * Germany, industrially powerful but poor in resources and weak financially, is attempting to take by force what Great Britain possesses.

"Thus the war in Europe is between two powers, each with similar economic ends, each denying its subjects democratic procedure."

In the same issue Andrew Roth, one of the six charged today with conspiracy, had an article telling, in a pleased tone, about England's troubles with India as a result of the war in Europe.

A fellow member of Amerasia's editorial board with Jaffe was Owen Lattimore, whom the Government the following year sent to China to be Generalissimo Chiang Kai-shek's personal adviser. Mr. Lattimore later became director of the Pacific bureau of OWI.

Originally a Socialist, Jaffe found this too mild and drifted into the Communist orbit. About 1933 he became contributing editor of Labor Defender, monthly magazine of the International Labor Defense, the legal arm of the Communist Party.

From this post Browder transferred him to leadership in the American Friends of the Chinese People, where he ran a campaign against Chiang Kai-shek and in defense of Communist-controlled areas of China. Following a trip to these sections in 1937, Jaffe wrote a long report for the New Masses, Communist weekly.

Broadcast by Fulton Lewis, Jr.

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Fulton Lewis, Jr., over Mutual Network, Wednesday, May 23, 1945, Los Angeles, Calif.:

Well, the first chapter of the long-awaited shake-up in the governmental high command in Washington has come finally, and to call it a shake-up is a masterpiece of understatement; it turned out to have almost the proportions of a convulsion.

President Truman announced at his news conference at the White House this afternoon that he has accepted the resignation of Madam Perkins as Secretary of Labor, and Mr. Claude Wickard as Secretary of Agriculture, and Mr. Francis Biddle as Attorney General, effective the last day of June, and in their places he has appointed, as Secretary of Labor, former Senator Lewis Schwellenbach of Washington State, now a Federal judge there, and as Secretary of Agriculture, Representative CLINTON ANDERSON, of New Mexico, chairman of the special House committee that has been investigating the Nation-wide food situation, and as Attorney General, the present Assistant Attorney General in charge of war frauds prosecution, Mr. Tom C. Clark of Dallas, Tex.

And may I say, as one who knows all three of those men personally, and knows two of them very, very well indeed, that no three better appointments were ever made to any President's Cabinet, in all the history of this country. These are three of the topmost of top-flight men. They are not rich men's sons; they are not play boys, amusing themselves with the glamorous business of public life. They are all men who have worked for a living all their lives, and who understand what it is to make a dollar.

You have heard Representative CLINTON ANDERSON'S name many times over this microphone. It was he who wrote the extraordinarily fine and comprehensive meat investigation report for his committee—which I commended to your attention, and for which, by the way, he has received more than 33,000 requests from you—and it was he, also, who wrote the committee's report on its investigation of the sugar situation, which I mentioned to you day before yesterday. He's a farmer himself, he has a farm of 800 irrigated acres in New Mexico and two more farms in the Dakotas, and he knows what it's all about. What's more, he is one of the keenest and soundest and most realistic minds, in the entire Congress. But of top importance, the President not only gave Representative ANDERSON the Department of Agriculture today, but he also put him in complete control of the War Food Administration, as well—accepting the resignation of War Food Administrator Marvin Jones. That means that the process of getting all of the food powers of the Government back under one head, where they belong, is actually under way and the man who has control is one who believes and says that the only way to control black markets, is to produce more meat and other foods, and to allow everyone along the line to make a fair and reasonable profit. He also believes and says that in dividing up the short supplies we do have available, the Army should continue to come first, as it does now, but that thereafter the American civilian public should get what it needs, leaving the remainder for lend-lease, instead of lend-lease getting what the whim of the moment dictates, and letting the civilian public have what is left.

As for Lewis Schwellenbach, he left the Senate to accept the place on the Federal bench in the Northwest back in 1940, if I remember correctly, and you recall that as late as a year ago when I was passing through Washington State, I mentioned to you the remarkable record that he had made for himself there. He has done such an outstanding job that he won the outspoken admiration of even the most partisan Republicans. I was told that there was one case that came before him, in which some little citizen had had his land taken away from him by the Army and couldn't get any satisfaction, and was being imposed upon generally, and Judge Schwellenbach hauled the Army officers into court and threatened to punish the whole lot of them, uniforms or not, unless they settled the trouble at once.

Tom Clark I know less well, personally, but what I do know is on a par with the other two. He came into the Government service as a young lawyer from Dallas, Tex., at $4,500 a year, and has worked his way up ever since. From all reports he has done a very creditable

job as chief of the War Frauds Division, and he, along with the other two, are highly intelligent, feet on the ground, healthy, honest citizens, who believe that two and two still make four. They are not superthyroid, and they talk in language that makes sense, instead of doubletalk, and they have not the slightest tinge of exhibitionism or tint of parlor pink. They are, let's say, "liberal but honest."

The really great significance of these changes today lie in the fact these appointments are strictly a swing back to the Democratic Party and away from the radical and long-haired fringe. In fact, the slogan among political topsiders today is that "the Democratic Party is coming back into control." By way of further evidence along the same line, President Truman's calling list of yesterday showed, in immediate succession, the names of Jouett Shouse, Lawrence Wood Robert, and Homer Cummings—all former top figures in the Democratic Party but long since sent into political exile. These changes today also suggest that there may be a realistic reorganization of the labor functions of the Government, too. In the course of the last few years, as you know, virtually all real powers were taken away from the Labor Department under Madam Perkins and put elsewhere, and the various war labor agencies were all set up as independent agencies, sprawled all over the lot. It's not at all improbable that under Secretary Schwellenbach they'll be gathered back into the Labor Department, where they should be, too. Incidentally, Judge Schwellenbach is strictly a nonpartisan, as between the CIO and the American Federation of Labor. He is eminently satisfactory to all factions alike.

The President said today that he has no intention of accepting the resignation of Secretary of the Treasury Morgenthau, or Secretary of State Stettinius. Secretary of Agriculture Claude Wickard will be named as head of the Rural Electrification Administration.

House Resolution 287

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, I was unavoidably absent from the Chamber when the yeas and nays were ordered on roll call 287, covering H. R. 3109, referred to as the House expense allowance bill. Had I been present, I would have voted "no."

Mr. Speaker, I believe that my constituents have a right to know my position regarding this legislation. When H. R. 3109 was before the House on May 10, I stated my position at that time. My remarks are recorded on page 4942 of the CONGRESSIONAL RECORD of May 10, 1945. Under leave to extend my remarks on House Resolution 287, I desire to include as part of my remarks the statement I made on that date:

Mr. Chairman, I am opposed to the provision contained in H. R. 3109 which would allow the sum of $2,500 per year as an expense allowance for each Member of the Congress.

Mr. Chairman, it is my desire to make clear my position in this matter. I do not question the sincerity of those Members who urge the necessity for this legislation, but, for myself, I am opposed to it for the following reasons:

First. Recently the Legislature of the State of Wisconsin considered the question of allowing the members of the legislature an amount to cover expenses while in attendance at sessions. The bill was overwhelmingly rejected and newspaper comment was almost unanimously opposed to it. Therefore, I must assume that my constituents have spoken in this matter and I yield to their judgment.

Second. This is no time to be voting expense allowances for ourselves. It is true that many Members need this extra money in order to meet the heavy monetary demands of this office; for many it is a considerable sacrifice. But, Mr. Speaker, when I attempt to justify my sacrifices with those of my son and my daughter, I find no basis for comparison.

Third. It is my opinion that a straight salary-increase bill should be submitted to the Congress when the war is over—then the subject can be considered under more normal conditions.

United States Communists Adopt a New Line

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. CURTIS. Mr. Speaker, newspapers last evening carried headlines that top United States secrets were available to the Communists. The story gave an account of certain arrests made by the Federal Bureau of Investigation. It is encouraging to know that at least something is being done.

Within the past few days a development has taken place fraught with grave consequences for our country. The statement of Jacques Duclos, secretary of the French Communist Party, acting as the official spokesman of international communism, in criticizing the line of the American Communists, and the subsequent adoption of a new revolutionary line by the Communist Political Association of the United States, will undoubtedly usher in a period of accentuated strife and subversive activities under the leadership of the American Communists. I place these statements into the RECORD to sound a note of official warning to the FBI, the Army, the Navy, and our own Special Committee on Un-American Activities.

Since the Communist organization has shown in its 25 years of existence in this country its complete and consistent subservience to the dictates of its masters in Moscow, we must lay the responsibility for any activities emanating from Communist sources squarely at the door of the Soviet Government. The great masses of the American and the Russian people have the greatest desire for friendly relations between their Governments. Should the activities of the American Communists injure these relations, then ours will not be the blame.

Mr. Speaker, I wish to further extend my remarks by including an article from the Washington Times-Herald of May 25, 1945, and an article from the New York World-Telegram of May 24, 1945:

[From the Washington Times-Herald of May 25, 1945]

REBIRTH OF UNITED STATES COMMUNISTS UNDER FOSTER HINTED BY FRENCH WRITER'S BLAST AT BROWDER—REMOVAL OF AMERICAN PARTY HEAD PRESAGED—CRITICISM BELIEVED INSPIRED BY STALIN

(By Walter Trohan)

A sensational Communist article, which presaged the return of revolutionary and subversive policies against the United States and Great Britain and signaled the possible removal of Earl Browder as the head of American Communists, was being studied in official circles last night with grave interest.

The article, which reached official circles here through France, consisted of a sizzling rebuke from one Communist to another. Jacques Duclos, secretary of the French Communist Party, assailed Browder in an article, entitled "Notes on the Dissolution of the American Communist Party," which appeared in Les Cahiers du Communisme, official publication of the French Communist Party.

INSPIRED BY STALIN

As the French article was being translated here, it was published in full in the Daily Worker, with a note by Browder, which asserted that the article demands "our most respectful consideration."

Those conversant with international Communist procedure said Browder's publication of the article gave it official stature and made certain the suspected fact that the article was inspired by Josef Stalin. It has been the rule of the allegedly dissolved Comintern that every Communist leader must publish attacks upon him by leaders outside the country. This rule was enforced to keep leaders in various countries under party discipline.

Officials here also recognized that a leader of Duclos' stature would not criticize the head of the American Communists without the approval of Moscow. These officials said criticism of Browder could not very well come from Moscow, since the international Communist organization is dissolved, so that Duclos was evidently employed to announce the change of Communist Party to the world.

It was recalled that, whenever Stalin changes his line, he disposes of his previously-authorized spokesman. For this reason, Litvinov was placed on ice along with collective security when the Hitler-Stalin pact, which precipitated the war, was signed and Molotov became the chief Soviet voice on foreign affairs.

It was predicted here that Browder will be similarly shelved and William Z. Foster, veteran Communist, will become the head of Communist activities in this country. If Browder is not actually removed, it was reported in official circles, he will be forced to execute a rapid about-face on policy.

The article of the French Communist was viewed as heralding the end of the Communist democratic honeymoon, which began when Hitler declared war on Russia. Such a step was held to be fraught with possible grave consequences to the United States.

It was recalled that strikes are one of the chief weapons of the Communist world revolution and that a strike of the maritime union, which has been held in Congress to

have heavy Communist affiliations, might delay the return of American soldiers from Europe. It also was recognized that strikes would hamstring the Pacific war.

FAULTY CONCEPTION CHARGED

Significant passages in the Duclos attack on Browder for dissolution of the American Communist Party into the Communist Political Association, which was condemned by the French leader as a renunciation of world Marxism, include:

"Earl Browder made himself the protagonist of a faulty conception of the direction of the social revolution in general and in particular of the direction of the special evolution of the United States."

"In spite of the declarations concerning the recognition of Marxist principles, we are witnessing a manifest reconsideration of Marxism by Browder and his partisans, a reconsideration expressed through a conception of lengthy peace between classes in the United States, through the possibility to suppress class warfare in the postwar period, and through the establishment of harmony between labor and capital."

"The French Communists will not approve the policy followed by Browder, for it is spreading dangerously far from the victorious doctrine of Marxism-Leninism, whose rigidly scientific application could only lead to one conclusion; not to dissolve the American Communist Party."

CONFUSION OBSERVED

"Moreover, one will observe a certain confusion in Browder's declaration as concerns the problem of nationalizing monopolies and what he calls the transition from capitalism to socialism. The nationalization of monopolies is by no means a Socialist achievement, contrary to what some are inclined to believe. No; nationalization is merely a reform of a democratic nature, and the achieving of socialism cannot be conceived without seizure of power.

"In truth, nothing justified, according to us, the dissolution of the Communist Party of the United States."

Duclos insisted the American Communists "are spreading dangerous opportunist illusions which will have a negative influence on the American labor movement unless they are properly countermanded."

In the light of the recent Communist successes in elections in France, the Duclos statement takes on additional significance, it was said here. It follows the general belligerent Soviet attitude in dealing with the Allies on Yugoslavia, Poland, Greece, Austria, and Rumania.

[From the New York World-Telegram of May 24, 1945]

BROWDER ADMITS REBUKE ON POLICY—PARTY LINE MAY REVERT TO CLASS WAR

(By Frederick Woltman)

Earl Browder and the leadership of his Communist Political Association were forced by the World-Telegram today to admit to their followers and the world in general that they have been sharply rebuked by a spokesman of the international Communist movement for abandoning basic revolutionary tenets. As a result, they announced also, America's Reds now face a drastic reversal from a policy of cooperation with capitalism to one of Marxist class struggle.

The official condemnation was first disclosed in this country Tuesday in an article by Nelson Frank, World-Telegram staff writer. After 2 days of silence Mr. Browder finally was smoked out. Today's Daily Worker, of which he is editor, publishes the complete text of the rebuke, using 3 of its 16 pages.

ARTICLE REPRINTED

Both the rebuke and its public acknowledgement were regarded by Government circles today as extending in significance far beyond the shores of the countries involved and indicating the future political trend of Soviet Russia, since 1919 the mecca of communism.

Following the World-Telegram's prod, the Worker reprints the politically authoritative diatribe against Mr. Browder and his policies by Jacques Duclos in the magazine Cahiers du Communisme, described by the Worker as the "theoretical organ of the Communist Party of France."

This marks the first publication of any criticism of Mr. Browder in an official Communist organ since he was made leader in 1930.

HUMBLE AND PENITENT

Among other things, the Duclos document charges Mr. Browder with false concepts, a notorious revision of Marxism, erroneous conclusions, deforming in a radical way the meaning of the Teheran Allied agreement, and sowing dangerous opportunist illusions which will exercise a negative influence on the American labor movement. * * *

Accompanying the lengthy text is "A Foreword to the Article of Jacques Duclos," written by Mr. Browder himself, in the dual capacity of Daily Worker editor in chief and president of the Communist Political Association.

Humble in manner and penitent in tone, Browder characterizes his attacker as "one of the main leaders of the Communist Party of France, whose policy or his own country is, unquestionably, sound. * * *

"Unquestionably," he says, the article "reflects the general trend of opinion of European Marxists in relation to America and, thus, demands our most respectful consideration."

As evidence of Browder's alleged backsliding, Duclos, in the Daily Worker version, quotes the top American Communist as pledging on September 25, 1944:

"To loyally support the existing system of private enterprise which is accepted by the overwhelming majority of Americans * * * to restrain all impulses toward strike movements among workers and to prepare the workers for a continuation of national unity after the war."

"READY TO COOPERATE"

Duclos also disapprovingly quotes this Browder commitment to America in behalf of his Communist organization:

"If anyone wishes to describe the existing system of capitalism in the United States as 'free enterprise,' that is all right with us. And we frankly declare that we are ready to cooperate in making this capitalism work effectively in the postwar period with the least possible burdens upon the people."

Remarks Duclos, according to the Daily Worker: "Browder's analysis of capitalism in the United States is not distinguished by a judicious application of Marxism-Leninism."

So Browder, in today's report, accommodates by tossing overboard the American Communists' year-old program of wartime and postwar unity:

"We must make the most careful inventory, balance our political books and know clearly how we stand as we enter a new period of sharpening struggles, crises and profound changes."

All along Browder has been promising that the Tehran declaration makes possible a policy of unity and cooperation by the Communists here long after the Nazis and Japs are defeated. Now, with Russia out of the war, he suddenly abandons this line and announces: "It has been clear at all times that the end of the war in Europe would require a fundamental review of all problems by American Marxists."

PERIOD OF NEW STORMS

Hence the national board of the CPA will quickly take up "the main questions raised by Duclos," according to Browder, to formulate "a clear perspective for the coming period of new storms."

"Now," he warns, "is the testing time for the integrity, understanding, and maturity of the CPA and of each member."

Apprehensively, he adds: "Our enemies will raise a gleeful clamor to greet the open discussion of difference of opinion between Communists of different lands and between Communists within America."

Browder and his associates have had the Duclos attack for some weeks, but were holding it under wraps, it was learned from sources close to CPA headquarters, 35 East Twelfth Street. They hoped to keep it quiet until Browder could crawl back on the limb gradually.

Since the World-Telegram's article appeared, 2 days ago, CPA headquarters has been disrupted by frantic emergency conferences. One top official of the CPA, according to Duclos, had tried, unsuccessfully, to defeat the Browder line, William Z. Foster, former Communist Presidential candidate.

Mr. Foster has been wearing a wide grin around headquarters the past 2 days.

Big Industry Points Out Threatened Shortage of Bread and Bakery Products

---

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1945

Mr. PITTENGER. Mr. Speaker, I conferred yesterday with one of the men in the baking industry who is genuinely alarmed over the present critical problem which has developed in connection with the bread and baking industry. There is a threatened cut in the amount of sugar and the amount of shortening which will be available to the baking industry. If these cuts go into effect, the amount of bread and bakery products will not be sufficient to meet the demand and someone will not be able to get bread or bakery products. If such a shortage of these supplies should develop it will mean rationing to the American housewife.

Certainly this situation gives an added reason why we should have a food czar to straighten out the mess. The report of the House committee to investigate the food shortage was transmitted to the House May 1, 1945. That is exactly 1 month and 8 days ago. We are just 37 days late, Mr. Speaker, in not having a food czar to straighten out some of these matters and protect the American people and see to it that there is an adequate supply of bread for the American housewife.

This condition calls for immediate action by Congress. It is so important that the Bakers Weekly ran a message in the Post and the Evening Star, of Washington, D. C., under date of June 5, 1945. This message reads as follows:

MUST WE NOW FACE RATIONING OF BREAD AND OTHER BAKERY PRODUCTS?

AN URGENT MESSAGE TO MEMBERS OF CONGRESS, T GOVERNMENT AGENCIES CONCERNED WITH FOOD, AND TO THE PUBLIC

True, no one yet is obliged to turn in ration stamps for a purchase of baked goods.

It is equally true, however, that we face an indirect but very effective form of rationing. Right now additional cuts in bakery use of sugar and shortening are being proposed. If they are put into effect, the bakers of America will be forced to reduce their production to levels that will seriously endanger the feeding of the general public.

This in the face of a supply of wheat, more than adequate to meet any conceivable demand, a supply, however, that is virtually useless as a food until it is rendered palatable by the addition of sugar, shortening, and other ingredients.

This in the face, too, of increasingly critical civilian shortages in meats and other protein foods, for which bread and other bakery products provide the most satisfactory and nutritious replacement.

The demands of war workers and other civilians for these energy foods have been met by increasing bakery production to 145 percent of prewar levels. This has been accomplished in spite of drastic curtailments in the amount of sugar and shortening allowed bakers. By direct rationing, bakers are now limited to 75 percent of their prewar use of sugar and to 80 percent of shortening.

To meet this all-time high in public demand with limited materials has required the utmost of skill and all possible conservation methods in order to keep bakery products wholesome and flavorful.

Further curtailment of sugar and other essential materials can mean only one thing; a corresponding reduction in the amount of baked goods that can be provided for the American public. The neighborhood baker will close his store earlier in the day, or several days a week. The grocer's bread and sweet-goods department will display a sold-out sign earlier and oftener.

There will be less bread, cake, and other baked foods for workers' and school children's lunches, and for the family table.

Able congressional committees have lately turned the spotlight on our growing crisis in food. In our opinion, most of the Government officials in the many agencies concerned with food are genuinely alarmed. No one man or agency is responsible for the situation.

Food processors generally have welcomed President Truman's appointment of Congressman CLINTON P. ANDERSON as Secretary of Agriculture. With his associates on the House Special Committee to Investigate Food Shortages, he has laid the groundwork for his new assignment to overhaul our critically tangled food supply and distribution set-up. The President has indicated that Mr. Anderson will have the necessary authority to really function through coordinated controls—an authority which has not been delegated to anyone up to this late date in the war.

It may be that no measures can bring adequate relief immediately. But prompt action on the Anderson committee recommendations—including full disclosure of foreign shipments—is our only hope of maintaining a decent minimum base for our home-food program for the balance of the war and the reconversion period.

RECOMMENDATIONS OF THE HOUSE SPECIAL COMMITTEE TO INVESTIGATE FOOD SHORTAGES

1. Establish authority and responsibility for procurement, transportation, pricing, and distribution under one coordinating head.

2. Open negotiations immediately for the purchase of the 1946 Cuban and Puerto Rican sugar crops.

3. Provide Hawaii with heavy type machinery such as crawler cranes and front-axle-drive trucks for sugar production.

4. Provide adequate machinery, supplies, and labor for domestic beet and cane areas by fullest cooperation between War Food Administration, War Manpower Commission, War Production Board, and the War Department.

5. Make available to friendly European countries that are in short supply for plantings in the spring of 1946 our surplus beet seed. Consideration should be given to the substitution of other carbohydrates, particularly cereals, for part of the sugar now tentatively allocated to them.

6. Encourage the production of corn sugar and syrups in 1945.

7. Tighten rationing controls so that allocations will not be exceeded.

8. Establish a minimum figure below which the supply of sugar for United States civilian use will not be allowed to fall.

9. Reexamine allotments made to different classes of industrial users.

10. Review all foreign commitments and adjust to safeguard minimum allotments for United States civilian use.

11. Make public all commitments and allocations, domestic and foreign, with explanatory supporting data.

CLINTON P. ANDERSON,
Chairman.

STEPHEN PACE.
EARLE C. CLEMENTS.
MARTIN GORSKI.
AUGUST H. ANDRESEN.
CHRISTIAN A. HERTER.
HAL HOLMES.

Mr. ANDERSON has demanded, through his committee's recent report on sugar, that the American public be given access to all possible facts. This means that secrecy be maintained only where military considerations are involved; but that on the other hand the public be told the truth of our commitments to foreign noncombatant populations, for direct-consumption or industrial use.

FROM THE SENATE

Extract from a letter to Chairman ANDERSON from Hon. JAMES E. MURRAY, chairman, Senate Small Business Committee:

"As you have now been nominated for Secretary of Agriculture and, according to press reports, will also become War Food Administrator, I feel it is incumbent upon you to see that your committee's recommendations are implemented immediately so that we may most effectively utilize our present supplies of sugar."

STRAIGHT TALK FROM LEADING BAKERS TESTIFYING BEFORE THE HOUSE FOOD SHORTAGES COMMITTEE

"Wheat-flour is not acceptable food unless combined with sugar and shortening (and other ingredients) to become, as bakery products, the principal consumable form of grain. Bakers predict that further reductions in quotas of these necessary ingredients, including sugar, will result in the equivalent of rationing of bakery products through production cutbacks despite the plentiful supply of wheat flour."

JOHN T. MCCARTHY,
President, American Bakers Association.

"If our allotments of sugar are further reduced we will have to reduce our utilization of the abundant wheat supply and the availability of bakery products to just that extent. In other words, if we are going to sustain a reduction of 10 percent, or 20 percent, in our present allotments of sugar, there will be 10 percent or 20 percent less bread and other bakery products for the American people. Many bakers cannot sustain any such cut in production without closing their doors."

FRANK G. JUNGEWAELTER,
Secretary, Associated Retail Bakers of America.

It should be noted, Mr. Speaker, that this message or advertisement summarizes the recommendations of the committee headed by our colleague CLINTON P. ANDERSON for the purpose of trying to avoid or at least minimize a food shortage.

You will note that the Bakers Weekly lists 11 recommendations of the House Food Investigating Committee. Congress ought to know if those recommendations are being translated into action. The American people have a right to look to Congress for protection against irresponsible and ill-advised policies of Government agencies and bureaus. If they do not function, Congress should abolish them and new administrative departments created with able and qualified men to direct them. We will have no relief from the food shortage until this is done.
